Dynatrace-Associate学習ツールの魂としての「信頼できる信用」、経営理念としての「最大限のサービス意識」により、高品質のサービスをお客様に提供するよう努めています。あなたの小さなヘルパーになり、Dynatrace-Associate認定テストに関するご質問にお答えするサービススタッフは、すべてのユーザーとの包括的で調整された持続可能な協力関係を目指します。 Dynatrace-Associateテストトレントに関するパズルは、タイムリーで効果

的な応答を受け取ります。公式ウェブサイトにメッセージを残すか、都合の良いときにメールを送信してください。

Dynatrace Dynatrace-Associate 認定試験の出題範囲：

トピック	出題範囲
トピック 1	• User Experience Monitoring: Covers real user monitoring (RUM) to track and analyze how end users interact with and experience web and mobile applications.
トピック 2	• Dashboards: Covers building and customizing dashboards to visualize and communicate observability data across teams and stakeholders.
トピック 3	• Traces: Covers distributed tracing and PurePath technology to track and analyze individual transactions end-to-end across services.
トピック 4	• Infrastructure Observability: Covers monitoring and visibility into hosts, services, and infrastructure components to detect and analyze performance issues.
トピック 5	• Log Investigation: Covers querying, filtering, and analyzing log data within Dynatrace to troubleshoot and identify root causes of problems.
トピック 6	• Synthetics: Covers the creation and monitoring of synthetic tests to simulate user interactions and proactively detect availability or performance issues.

Dynatrace Associate Certification Exam 認定 Dynatrace-Associate 試験問題 (Q16-Q21):

質問 # 16
Which steps outline the Business Event Dataflow? (Select all that apply)

- A. Export
- B. Process
- C. Capture
- D. Analyze

正解：B、C、D

解説：
The Business Event Dataflow in Dynatrace follows a structured pipeline that focuses on collecting, handling, and analyzing business events:
* Capture - Business events are ingested into Dynatrace from various sources such as applications, APIs, or external systems
* Process - The captured data is processed, enriched, and stored within the Dynatrace platform (Grail)
* Analyze - Users query and analyze the processed data using tools like dashboards and DQL Export is not considered a core step in the business event dataflow. While exporting data is possible, it is not part of the primary ingestion-to-analysis pipeline defined in Dynatrace.
Reference: Based on official Dynatrace University training materials covering Business Analytics and Grail data flow.

質問 # 17
What are the critical features available with the Dynatrace Application Security feature?

- A. Runtime Vulnerability Analytics
- B. On-Demand Code Security Analysis
- C. Runtime Application Protection
- D. Automatic Vulnerability Remediation

正解：A、C

解説：
Dynatrace Application Security provides:
* Runtime Vulnerability Analytics - detection of vulnerabilities in running applications
* Runtime Application Protection (RASP) - protection against exploits in real time It does NOT provide:
* Automatic remediation
* Traditional static/on-demand code scanning
Reference: Based on official Dynatrace University training materials on Application Security.

質問 # 18
What sort of outage occurs when all Synthetic Locations simultaneously experience 1-5 consecutive failures?

- A. Public Synthetics
- B. Private Synthetics
- C. Local outage
- D. Global outage

正解： D

解説：
A Global outage is detected when all configured Synthetic locations report failures at the same time within a defined number of consecutive failed executions. This indicates that the issue is not location-specific but instead affects the application or service globally.
Dynatrace Synthetic Monitoring differentiates between:
* Local outages , where only a subset of locations fail (indicating regional or network-specific issues)
* Global outages , where all locations fail simultaneously, indicating a widespread availability problem Options such as Public Synthetics and Private Synthetics refer to types of Synthetic locations, not outage classifications.
Reference: Based on official Dynatrace University training materials covering Synthetic Monitoring and outage detection.

質問 # 19
Log files from my application may contain messages with errors. Whenever messages like these occur, we wish to notify support teams to investigate. Which Dynatrace feature would best address this ask?

- A. Log Viewer
- B. Log Processing rules
- C. Anomaly Detection rules
- D. Log Metrics
- E. Log Events

正解： E

解説：
Log Events allow Dynatrace to detect specific patterns (such as error messages) in logs and automatically trigger alerts.
They enable:
* Detection of error patterns in logs
* Creation of events/problems
* Notification of support teams
Other options:
* Log Processing rules transform logs, not alert
* Anomaly detection rules are metric-based
* Log Metrics convert logs into metrics but don't directly alert
* Log Viewer is for manual inspection
Reference: Based on official Dynatrace University training materials on log monitoring and alerting.

質問 # 20
I want to use Dynatrace's global network of Synthetic Monitoring locations to monitor my application, which capability provides this?

- A. Synthetic On-demand execution
- B. Dynatrace Apps
- C. Private Synthetics
- D. Public Synthetics

正解：D

解説：
Public Synthetics use Dynatrace's global network of locations to test applications from various geographic regions.
* Ideal for global availability testing
* No infrastructure setup required
Private Synthetics are for internal environments.
Reference: Based on official Dynatrace University training materials on Synthetic Monitoring.

質問 # 21
.....

あなたはいい仕事を見つけたい場合、Dynatrace-Associate参考資料を選択してください。多くのお客様はDynatrace-Associate試験参考書を選択したら、Dynatrace-Associate認定試験資格証明書を取得しました。また、Dynatraceのサービスもいいし、２４時間のサービスを提供できます。だから、それは最もいい資料です。
