最新的 Pure Storage FAIS FlashArray-Implementation-Specialist 免費考試真題 (Q76-Q81):

問題 #76
When updating Purity on a new array, which command should the Implementation Engineer run to start the process?

- A. pureinstall
- B. purereboot --install
- C. puresetup

答案：A

解題說明：
To initiate a Purity Operating Environment (OE) software upgrade from the Command Line Interface (CLI), the correct command is pureinstall.
pureinstall: This command manages the upgrade workflow. It typically takes an image file (ISO) as an argument or downloads it from the repository, unpacks it, performs pre-flight checks, and then applies the update to the controllers in a non-disruptive rolling fashion.
purereboot is used to restart a controller or the array but does not install software.
puresetup is used for the initial configuration of network settings and array names, not for software updates.

問題 #77
Which PCI cards must be validated on the Bill of Materials (BOM) to allow an Implementation Engineer to attach a DirectFlash Shelf to a FlashArray//XL130R5?

- A. FA-XL-200G Ethernet/RoCE 2-Port
- B. FA-XL-100G iSCSI/RoCE 2-Port
- C. FA-XL-100G Ethernet/RoCE 2-Port

答案：C

解題說明：
The FlashArray//XL series (such as the XL130R5) utilizes a modern backend connectivity architecture for its expansion shelves, specifically the DirectFlash Shelf (DFS). Unlike older generations that might have used SAS (Serial Attached SCSI) for shelf connectivity, the //XL architecture relies on high-speed Ethernet with RoCE (RDMA over Converged Ethernet) to communicate with external media shelves. This ensures that the NVMe drives in the shelf perform with the same low latency as those in the head unit.
To attach a DirectFlash Shelf to a FlashArray//XL130R5, the chassis must be populated with specific PCIe interface cards designated for shelf back-end connectivity. The correct part for this is the FA-XL-100G Ethernet/RoCE 2-Port card. This card provides the necessary 100 Gigabit Ethernet bandwidth and RoCE protocol support required for the NVMe-oF (NVMe over

Fabrics) backend fabric that Pure Storage uses.
It is crucial to distinguish this from host-facing cards. While an "iSCSI/RoCE" card exists, the shelf connectivity specifically utilizes the "Ethernet/RoCE" designation in the BOM to differentiate backend fabric ports from frontend host ports. The 200G options are generally reserved for host connectivity or inter-array clustering in specific high-performance setups, but the standard validated card for connecting the DFS to the
//XL130R5 is the 100G Ethernet/RoCE adapter. Verifying this line item on the BOM prevents onsite delays where the engineer might otherwise find themselves with incompatible ports for the expansion shelves.

問題 #78
When should a FlashArray support case be opened?

- A. Before starting install
- B. Once an issue arises
- C. Once install is completed

答案： A

解題說明：
Opening a support case before starting the installation ensures timely assistance and coordination with support throughout the deployment process.

問題 #79
What upgrade scenario required an upgrade of power supplies?

- A. X10 > X50
- B. X50 > X70
- C. X50R2 > X50R3

答案： A

解題說明：
The upgrade from a FlashArray//X10 (or X20) to a FlashArray//X50 requires a mandatory power supply unit (PSU) upgrade . While the FlashArray//X series utilizes a shared chassis design (3U) for models X10 through X90, the power requirements differ significantly between the entry-level and performance-tier controllers.
* X10/X20: These models typically ship with 1000W or 1200W power supplies, which are sufficient for their lower-power CPUs and component loads.
* X50/X70/X90: These "Performance" class arrays utilize higher-wattage Intel Xeon processors and often support denser NVMe configurations, necessitating 1600W power supplies to ensure stability and N+1 redundancy.
When a customer performs a Data-in-Place upgrade (swapping controllers) from an X10 to an X50, the existing chassis is retained, but the lower-capacity PSUs must be physically swapped for the high-capacity
1600W units to support the new X50 controllers. Conversely, upgrades like X50 > X70 (Option B) or R2 > R3 (Option C) typically occur within the same power tier, utilizing the existing 1600W PSUs.

問題 #80
What upgrade scenario required an upgrade of power supplies?

- A. X10 > X50
- B. X50 > X70
- C. X50R2 > X50R3

答案： A

解題說明：
Upgrading from FlashArray X10 to X50 requires upgrading power supplies to meet the higher power demands of the larger chassis and expanded hardware.
