Cisco Implementing Cisco Enterprise Wireless Networks Sample Questions (Q103-Q108):

NEW QUESTION # 103
A controller shows that an AP in your environment is detecting interference, but the AP health score in Cisco DNA Center is unaffected. What are two reasons that Cisco DNA Center is ignoring the interference?
(Choose two.)

- A. The interference is less than or equal to 30% on the 5 GHz radio.
- B. Cisco DNA Center does not include interference in the AP health score.
- C. Cisco DNA Center includes only Cisco CleanAir interferers in the AP health score.
- D. The interference is less than or equal to 30% on the 2.4 GHz radio.
- E. The interference is less than or equal to 50% on the 2.4 GHz radio.

Answer: A,C

Explanation:
Cisco DNA Center is likely ignoring the interference detected by the AP because it includes only Cisco CleanAir interferers in the AP health score (option C), and the interference is less than or equal to 30% on the
5 GHz radio (option D). Cisco DNA Center's AP health score algorithm may not consider interference that falls below a certain threshold or interference that is not identified as a CleanAir event. NEW QUESTION # 104
An engineer must implement Cisco Identity-Based Networking Services at a remote site using ISE to dynamically assign groups of users to specific IP subnets. If the subnet assigned to a client is available at the remote site, then traffic must be offloaded locally, and subnets are unavailable at the remote site must be tunneled back to the WLC. Which feature meets these requirements?

- A. FlexConnect local authentication
- B. learn client IP address
- C. central DHCP processing
- D. VLAN-based central switching

Answer: D

NEW QUESTION # 105
A wireless engineer must implement a corporate wireless network for a large company in the most efficient way possible. The wireless network must support 32 VLANs for 300 employees in different departments.
Which solution must the engineer choose?

- A. Configure 16 WLANs to be broadcast on the 2.4-GHz band and 16 WLANs to be broadcast on the 5.0- GHz band.
- B. Configure different AP groups to support different VLANs, so that all of the WLANs can be broadcast on both radios.
- C. Configure a second WLC to support half of the APs in the deployment.
- D. Configure one single SSID and implement Cisco ISE for VLAN assignment according to different user roles.

Answer: D

Explanation:
For a large company requiring support for 32 VLANs for different departments, the most efficient solution is to configure one single SSID and use Cisco ISE for dynamic VLAN assignment based on user roles. Cisco ISE can classify users into different groups and assign them to the appropriate VLANs. This approach reduces the complexity of managing multiple SSIDs and simplifies the user experience while maintaining a high level of security and network segmentation. An engineer is deploying centralized wireless solution with a 5508 controller. What is the most AP licenses that can be supported?

- A. 0
- B. 1
- C. 2
- D. 3
