ISTQB CT-UT Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Basic Concepts: This section measures the skills of Usability Analysts and covers fundamental definitions and ideas related to usability, user experience, and accessibility. It explains what usability means in terms of effectiveness, efficiency, and satisfaction within software products. User experience concepts related to emotions, perceptions, and responses before, during, and after use are included. It also addresses accessibility, focusing on usage by people with diverse abilities.
Thema 2	• Selecting Appropriate Methods: This domain helps Test Managers make decisions on which usability evaluation methods to apply depending on project context, resources, and maturity. It discusses criteria for selecting usability, user experience, and accessibility evaluation methods suited to different stages of development and organizational needs, including agile development scenarios.
Thema 3	• Risks in Usability, User Experience and Accessibility: This domain assesses the ability of Risk Analysts to identify and analyze common risks that can affect usability, user experience, and accessibility. It differentiates between product risks—such as users being unable to use a product effectively—and project risks, including lack of expertise or insufficient usability evaluation processes. Understanding these risks helps in planning effective usability testing and evaluation.
Thema 4	• Usability Reviews: This domain evaluates the skills of Usability Testers in conducting reviews of software interfaces without user involvement. It differentiates informal reviews from expert reviews and introduces heuristic evaluation as a structured method. The section describes step-by-step approaches to preparing for and conducting reviews, emphasizing the importance of consensus and clear communication of findings.

ISTQB Certified Tester Usability Tester CT-UT Prüfungsfragen mit Lösungen (Q32-Q37):

32. Frage

Which of the following statements about usability testing is true?

- A. A usability test consists of one usability test session
- B. The preparation of a usability test is optional
- **C. Before the usability test sessions, a pilot usability test session can be conducted**
- D. The conditions under which a usability test is done are irrelevant

Antwort: C

Begründung:

A pilot usability test session is a critical step prior to conducting the actual usability test. Its purpose is to ensure that the test setup, task design, and moderator instructions are clear and function as expected.

According to ISO 9241-210 and the Nielsen Norman Group's best practices, pilot testing helps detect unforeseen issues and fine-tune the process. Options A and B are incorrect because testing conditions must reflect realistic scenarios, and thorough preparation is essential to gather meaningful usability data. Option D is also incorrect; a usability test typically consists of multiple sessions with different users to gather sufficient data for analysis. The pilot session ensures everything works smoothly before involving real participants.

33. Frage

A large customer complained that a business application developed by your company sometimes transfers the wrong amount of

money to clients, although there are no complaints of the actual users. The expected amount differs from the actually transferred amount by a factor of 10 or 100. After analyzing the log files, you found out that the application itself works fine. The problem seems to be caused by confusing text fields and labels for the decimal place, leading to user errors. Which usability risk should be reasonably addressed for the next release?

- A. Users buy the software product but repeatedly need to call support because they don't understand how to use it
- B. Users won't buy or use the software product because it lacks effectiveness, efficiency or satisfaction
- **C. Increased liability through risk to financial loss caused by a poorly designed or deceptive user interface**
- D. Users resist using a software product which is essential for their daily work because it lacks usability

Antwort: C

Begründung:

The scenario describes a situation where the interface misleads users into making serious financial mistakes due to poor design, such as confusing decimal separators. Even though the system functions correctly, it facilitates critical user errors. This constitutes a major usability risk with potential legal and financial consequences. Therefore, the correct risk to address is increased liability due to financial loss caused by a poorly designed or deceptive interface (option D). The other options focus on usability-related dissatisfaction, resistance, or lack of adoption, which are not the key concern in this scenario.

34. Frage

During a usability test, a user suggested that a quick search box on every page would help a lot for several of the main tasks. You added this finding to the list.

What's the correct classification for these kinds of findings?

- A. Usability problem
- B. Positive finding
- C. Functional problem
- **D. Good idea**

Antwort: D

Begründung:

In usability evaluations, a distinction is made between actual usability problems (where a user struggles to complete a task or is confused by the interface) and suggestions or ideas that users provide based on their preferences or perceived improvements. When a participant offers a new feature idea (such as a quick search box), this is classified as a "good idea" or "feature suggestion," not necessarily a usability problem. It may inform future design enhancements but does not indicate a failure in usability for existing functionality.

35. Frage

Which of the following is the best description for a usability test session?

- A. A test activity specified by the moderator that needs to be accomplished by a usability test participant within a given period of time.
- **B. A period of time in which a usability test participant is executing tests, moderated by a moderator and observed by a number of observers.**
- C. A black-box test technique in which test cases are designed to execute usability scenarios.
- D. A document specifying a sequence of actions for the execution of a usability test.

Antwort: B

Begründung:

A usability test session is a controlled period during which a test participant performs tasks using the system under test while being observed by a moderator and sometimes additional stakeholders or observers. The goal is to understand how users interact with the interface and identify usability problems. Option A describes an individual task, not the whole session. Option C refers to a test plan or test script, and Option D describes a test technique rather than a usability session. Thus, option B provides the most accurate and comprehensive definition.

36. Frage

Which of the following elements are addressed by the WCAG?

- i. Resizability of text
- ii. Visually appealing design
- iii. Text alternatives
- iv. Keyboard accessibility
- v. Mouse input

- A. i, ii, & iii are true, iv & v are false
- **B. i, iii, iv & v are true, ii is false**
- C. i & iii are true, ii, iv & v are false
- D. iv & v are true, i, ii & iii are false

Antwort: B

Begründung:

The Web Content Accessibility Guidelines (WCAG) provide standards to ensure websites are accessible to people with disabilities. They specifically address:

- i. Text resizing (SC 1.4.4),
- iii. Text alternatives for non-text content (SC 1.1.1),
- iv. Keyboard accessibility (SC 2.1.1),
- v. Device independence, which includes not relying solely on mouse input.

Visually appealing design (ii) is not an accessibility requirement and is thus not a WCAG focus. The correct answer is D: i, iii, iv & v are true; ii is false.
