

Real VMware Cloud Foundation 9.0 Support Pass4sure Torrent - 2V0-15.25 Study Pdf & VMware Cloud Foundation 9.0 Support Training Vce

Users do not need to spend too much time on 2V0-15.25 questions torrent, only need to use their time pieces for efficient learning, the cost is about 20 to 30 hours, users can easily master the test key and difficulties of questions and answers of 2V0-15.25 Prep Guide, and in such a short time acquisition of accurate examination skills, better answer out of step, so as to realize high pass the qualification test, has obtained the corresponding qualification certificate.

Many companies have been lost through negligence of service on our 2V0-15.25 study quiz. Some useless products may bring about an adverse effect, so choose our 2V0-15.25 practice engine is 100 percent secure for their profession and usefulness and also our considerate after-sales services. We have built effective serviceability aids in the early resolution of customer-reported problems, which then may result in higher customer satisfaction and improved warm support of 2V0-15.25 Exam Guide.

Hot Practice 2V0-15.25 Exams Supply you Free-Download Exam Dumps Free for 2V0-15.25: VMware Cloud Foundation 9.0 Support to Study casually

However, it's not always the same. Cramming is not what shall stay in your mind forever. you can forget the lines anytime making you blank while you are trying to solve your 2V0-15.25 Exam Questions. So, don't cram even if it takes you a little more time to clear your doubts and get the concept clear. Cramming is not going to stay with you forever.

VMware Cloud Foundation 9.0 Support Sample Questions (Q47-Q52):

NEW QUESTION # 47

An administrator is attempting to troubleshoot why the vSAN witness node cannot form a stretched cluster with the vSAN data nodes. The administrator can successfully ping the vSAN data node from the vSAN witness using the following command:

```
vmkping -I <witness-vmk#> <vsan-IPaddress> -s <1472> -d
```

What could be the possible cause of the issue?

- A. Port 12321 is not opened bidirectionally between all nodes.
- B. Port 443 is not opened bidirectionally between all nodes.
- C. The customer does not have any virtual machines in the vSAN Cluster.
- D. Jumbo Frames have not been enabled on the Witness Network.

Answer: A

Explanation:

In avSAN Stretched Cluster, communication between the witness node and data nodes requires several specific TCP/UDP ports. The ability to successfully execute:

```
vmkping -I <witness-vmk> <vsan-IP> -s 1472 -d
```

confirms that:

- * L2/L3 connectivity is present
- * MTU is correctly configured
- * ICMP traffic flows without fragmentation

However, vmkping alone does not verify vSAN control-plane communication.

For the vSAN Witness to properly form a cluster, TCP port 12321 must be open bidirectionally between:

- * Witness # Data nodes
- * Data nodes # Witness

Port 12321 is required for:

- * vSAN cluster membership
- * Witness traffic
- * vSAN object health/state synchronization

If this port is blocked by firewall policy or misconfigured network ACLs, the nodes can ping each other, but vSAN witness traffic will fail, preventing the stretched cluster from forming.

Why the other options are incorrect:

- * B. Port 443- Required for management, not cluster formation.
- * C. No VMs in cluster- Has no impact on witness formation.
- * D. Jumbo frames not enabled- Already ruled out by the successful 1472-byte vmkping with DF bit.

NEW QUESTION # 48

An administrator is responsible for managing a VMware Cloud Foundation (VCF) fleet. The following information has been provided about the VCF fleet configuration:

- * The VCF fleet consists of a single VCF instance with a single management domain and a single workload domain.
- * VCF Automation has a single Organization for VM Apps configured with a VCF Cloud Account for the workload domain.

The administrator has been tasked with creating a new Organization for All Apps to support the developers need to deploy Kubernetes-based applications in a new region in a workload domain.

The administrator attempts to create a new region through the VCF Automation Provider Portal but the VMware NSX manager for the workload domain does not appear on the list of available NSX managers.

What action must the administrator complete to resolve the issue?

- A. Deploy an additional VCF workload domain cluster.
- B. Trigger an inventory synch in VCF Operations fleet management.
- C. Deploy a new VCF workload domain.
- **D. Add the SDDC Manager integration for the VCF instance.**

Answer: D

Explanation:

In VMware Cloud Foundation 9.0 Automation, the Provider Portal must have full visibility into the underlying VCF inventory- including NSX Managers, clusters, regions, vCenters, and SDDC Manager objects- before new regions can be created for Kubernetes-based deployments (All Apps Orgs).

The issue described:

"The NSX Manager for the workload domain does not appear in the list of available NSX Managers" occurs when SDDC Manager is not integrated into VCF Automation. Without this integration, VCF Automation cannot discover workload domains or their associated NSX Managers. As a result, when attempting to create a new region, the NSX Manager list is empty.

The required action is:

Add the SDDC Manager integration under VCF Automation # Provider Portal # Integrations.

This integration enables Automation to pull:

- * NSX Manager inventory
- * vCenter endpoints
- * Workload domain topology
- * Cluster details

Only after this integration is complete will the NSX Manager appear and allow region creation.

Option A and D (deploying new WLD or cluster) are unnecessary- inventory access is the problem, not resources.

Option B (triggering inventory sync) cannot work because no SDDC Manager integration exists.

NEW QUESTION # 49

A VMware Cloud Foundation (VCF) administrator cannot deploy Virtual Machines (VMs) to a compute cluster.

The administrator discovers that the vCLS VMs on the problematic cluster are powered off and cannot be powered on. What action can the administrator take to enable deployment of VMs?

- A. Delete all resource pools in the affected cluster.
- B. Set DRS Automation level to fully automated.
- C. Disable HA on the affected cluster.
- **D. Enable retreat mode on the affected cluster.**

Answer: D

Explanation:

In vSphere 7+ and VCF-managed clusters, the vSphere Cluster Services (vCLS) VMs must remain powered on for DRS, cluster health, and policy enforcement to function. If the vCLS VMs cannot power on, no workloads—including new VMs—can be deployed to the cluster because vSphere considers the cluster unhealthy.

A common cause is insufficient resources (CPU/memory), datastore issues, or policy conflicts preventing vCLS VMs from starting. VMware provides Retreat Mode as a troubleshooting mechanism to temporarily disable vCLS, allowing the administrator to deploy VMs and correct underlying issues. Enabling retreat mode:

- * Removes vCLS from the cluster
- * Restores ability to deploy VMs
- * Allows remediation of storage/placement issues
- * Can later be disabled to restore DRS health

Option A (deleting resource pools) does not restore vCLS VM power state.

Option B (disabling HA) does not affect vCLS behavior.

Option D (setting DRS automation level) does not correct vCLS placement problems.

NEW QUESTION # 50

An administrator is responsible for managing a remote VMware Cloud Foundation (VCF) fleet with the following configuration:

- * A single VCF instance with a single Workload Domain.
- * The Workload Domain has a single VMware vSAN Express Storage Architecture (ESA) cluster.
- * VCF is licensed using the disconnected mode.

The administrator discovers a notification in VCF Operations showing that the VCF licenses have expired.

Which three steps should the administrator take to resolve the issue? (Choose three.)

- **A. Import the license file into VCF Operations and assign to the SDDC Manager.**
- B. Restart SDDC Lifecycle Manager Service in the VCF Operations console.
- C. Increase the license core count in SDDC Manager.
- **D. Export the usage file from VCF Operations and upload to the VCF Business Services console.**
- **E. Use the VCF Business Services console to export a new VCF license file.**
- F. Import the license file into VCF Operations and assign to the workload domain vCenter.

Answer: A,D,E

Explanation:

In VMware Cloud Foundation (VCF) 9.0 using disconnected mode licensing, VCF Operations does not automatically synchronize license status with VMware's cloud services. Instead, the administrator must periodically refresh the license file using a manual offline workflow. When the VCF Operations console reports that licenses have expired, it means the license entitlement in the VCF Business Services portal is out of date, and therefore VCF Operations cannot validate the current usage.

The VMware-documented offline licensing workflow requires the following steps:

* Export the usage file from VCF Operations. This usage file contains consumption details needed to generate a new offline license. #C is correct.

* Upload the usage file to the VCF Business Services console and generate a new offline license file. In disconnected mode, the Business Services portal is the only mechanism to create updated license entitlements. #D is correct.

* Import the updated VCF license file into VCF Operations, specifically assigning it to the SDDC Manager. SDDC Manager is the system that validates and enforces licensing across workload domains, so the new license must be applied there—not only to a vCenter. #F is correct.

Options A and B do not affect license validation.

Option E is incorrect because workload-domain vCenter licensing is independent and not the root cause of VCF license expiration.

NEW QUESTION # 51

The administrator has to change the DRS automation level in preparation to upgrade the vCenter. When making this change through VCF Operations, the following error occurs: 'Internal Error: Failed to retrieve vim client'. What is the possible cause of this error?

- **A. Connectivity issue between vCenter and VCF Operations.**
- B. The vCenter is overloaded with API requests from VCF Operations.
- C. DRS Automation is already set on the vSphere Client.
- D. Insufficient licensing for the advanced vCenter features.

Answer: A

Explanation:

The error:

"Internal Error: Failed to retrieve vim client"

occurs when VCF Operations cannot establish a functional API session with vCenter. The vim client is the internal vSphere API client library used by VCF Operations to perform cluster actions such as modifying DRS settings, powering on/off workloads, or retrieving inventory.

When this error appears, VMware documentation identifies these common root causes:

- * Loss of connectivity between VCF Operations and vCenter
- * DNS resolution issues
- * Network interruption
- * Stale or expired authentication tokens
- * Credential mismatch If the vCenter password was changed manually, VCF Operations may be unable to authenticate.
- * vCenter services restarting or unavailable If vCenter backend services (vpxd, sts, etc.) are unstable, VCF Operations cannot establish a vim session.

Option A is incorrect-DRS automation state in the vSphere Client does not cause vim client retrieval errors.

Option B (vCenter overloaded by API requests) would cause timeouts, not a vim client initialization failure.

Option D (insufficient licensing) affects feature use, not API connectivity.

NEW QUESTION # 52

.....

These VMware 2V0-15.25 questions can be customized by the user according to their needs. This customization feature so that customers can adjust the time as they want. They can change the settings of the time and questions as per need while giving the VMware 2V0-15.25 tests. These VMware 2V0-15.25 exam questions train candidates to maintain discipline so that they can solve the real VMware 2V0-15.25 questions on time while giving their final 2V0-15.25 exam.
