

# Review Key Concepts With AD0-E117 Exam-Preparation Questions

BONUS!!! Download part of RealValidExam AD0-E117 dumps for free: <https://drive.google.com/open?id=1s-a3SBYbq699f0KAyw1rxjho8lbDIYD2>

Our system is high effective and competent. After the clients pay successfully for the AD0-E117 certification material the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the AD0-E117 prep guide materials immediately. It takes only a few minutes for you to make the successful payment for our AD0-E117 learning file. Our system will automatically send the updates of the AD0-E117 learning file to the clients as soon as the updates are available. So our system is wonderful.

Adobe AD0-E117 (Adobe Experience Manager Architect Master) Exam is a certification exam designed for professionals who want to validate their skills and knowledge in Adobe Experience Manager (AEM) architecture. AEM is a powerful content management system that allows businesses to create, manage, and deliver digital experiences across multiple channels. The AD0-E117 Exam measures the candidate's ability to design and architect AEM solutions that meet the needs of their organization.

## Pass Guaranteed Quiz 2026 Professional Adobe AD0-E117 Latest Test Camp

Cracking the AD0-E117 examination requires smart, not hard work. You just have to study with valid and accurate Adobe AD0-E117 practice material that is according to sections of the present Adobe AD0-E117 Exam content. RealValidExam offers you the best Adobe AD0-E117 Exam Dumps in the market that assures success on the first try.

## Adobe Experience Manager Architect Master Sample Questions (Q86-Q91):

### NEW QUESTION # 86

Refer to the exhibit.

A customer with an existing AEM implementation wants to enrich product pages with technical data coming from their PIM system. The PIM system sits behind an API Management solution that publicly exposes the PIM API's as RESTful web services with basic authentication as the security mechanism. Data consistency with the PIM and secure access to the APIs are key elements of the integration.

How should the Architect set up the integration between AEM and the PIM?

- A. Convert the technical data to Content Fragments and expose using Content Services
- B. Use a client-side integration with AJAX from the browser to the API Management
- **C. Integrate the AEM Publishers directly with the API Management solution**
- D. Import the technical data into the AEM Author and replicate to Publishers

**Answer: C**

Explanation:

Integrate the AEM Publishers directly with the API Management solution. According to Adobe Experience Manager documentation<sup>1</sup>, a direct integration between AEM and PIM can enable marketers and creative professionals to manage eCommerce-related product data and photography within AEM. A direct integration can also ensure data consistency with the PIM and secure access to the APIs using basic authentication<sup>23</sup>. Option A is the only diagram that shows how AEM Publishers can directly communicate with the API Management solution.

#### NEW QUESTION # 87

A website built on AEM as a Cloud Service (AEMaaCS) leverages browser caching of JavaScript and CSS files to optimize page load times. After the caching is enabled, QA testers notice that newly delivered components are lacking newly developed features and are missing styling, even hours after their deployment.

Further analysis identifies outdated CSS and JavaScript files in the browser cache as the root cause.

What steps would an AEM architect take first to fix this issue?

- A. Check the Adobe Granite HTML Library Manager OSGi configuration to see if the timestamp appending option is enabled
- B. Append a user-specific unique ID query parameter to each JavaScript and CSS call as a cache-bust mechanism
- C. Check whether the clientlib paths are included in the dispatcher invalidation section of the Cloud Manager Deployment pipeline
- D. Add max-age=300 and must-revalidate Cache-Control headers to JavaScript and CSS files in the dispatcher configuration

**Answer: A**

#### NEW QUESTION # 88

An enterprise client is on-boarding an AEM Desktop application to provide authors with the ability to load the AEM repository virtually on the file system. The desktop application is unable to connect to the AEM Author, which has SSL enabled. The intermediate certificate is installed on Apache.

How should an Architect resolve this issue?

- A. Install the certificate chain to the keystore of the AEM authentication service user
- B. **Install the Root certificate to the AEM truststore**
- C. Install the certificate chain to the keystore of the AEM ssl-service user
- D. Install the certificate chain to the AEM truststore

**Answer: B**

Explanation:

"installing the Root certificate to the AEM truststore can allow AEM Desktop application to connect to AEM Author with SSL enabled".

#### NEW QUESTION # 89

A client migrated from their On-prem AEM instances to AEMaaCS. One of their requirements is the ability to publish full microsites, including all the children pages. In the legacy implementation, the client used the Tree Activation option in the Classic UI. They want to be able to use the same functionality on AEMaaCS. What is the recommended approach to do this?

- A. Use the Content Transfer Tool in Cloud Manager to move the content from Author to Publish
- B. Use the publish Distribution to tree publish the pages by selecting the "tree activation" option
- C. Use the workflow by creating a new Workflow Model using the "Publish Content Tree" process step
- D. **Use the provided "Publish Content Tree" model to publish all content under a single path**

**Answer: D**

#### NEW QUESTION # 90

A news agency editor wants to publish news articles to an intermediate Publish (preview) instance for internal review before publishing the article to production Publish instance.

Which two steps should the Architect recommend? (Choose two.)

- A. Set up a new replication agent for preview server
- B. Create a closed user group (CUG) for editors
- C. Create a custom publish workflow
- D. Create a reverse replication agent on preview server
- E. Create a separate live copy to preview content

**Answer: A,E**

### Explanation:

Create a separate live copy to preview content and set up a new replication agent for preview server1. According to Adobe Experience Manager documentation4, a live copy is used to create a local copy of content from another site that can be modified independently. A replication agent is used to publish content from an author instance to a publish instance. Creating a reverse replication agent on preview server (B) is not necessary as reverse replication is not supported by AEM as a Cloud Service1. Creating a custom publish workflow (E) is also not necessary as workflows are handled by AEM Cloud Service automatically1.

## NEW QUESTION # 91

As one of the most professional dealer of AD0-E117 practice questions, we have connection with all academic institutions in this line with proficient researchers of the knowledge related with the AD0-E117 exam materials to meet your tastes and needs, please feel free to choose. And we have three versions of AD0-E117 training guide: the PDF, Software and APP online for you. You can choose the one which you like best.
