To make this task easier for you, Splunk provides you with the most reliable and concise practice material, to pass the Splunk

SPLK-1002 in the first go. We make sure that a more confident and well-prepared student enters the Splunk SPLK-1002. This is a convenient and manageable e-book format that contains actual Splunk SPLK-1002 questions.

Splunk Core Certified Power User Exam Sample Questions (Q44-Q49):

NEW QUESTION # 44

A field alias is created where field1-field2 and the Overwrite Field Values checkbox is selected. What happens if an event only contains values for field1?

- A. field2 values are removed from the events.
- **B. field2 values are replaced with the value of the field1.**
- C. field1 and field2 values are merged.
- D. field2 values are unchanged.

Answer: B

Explanation:

Explanation

The correct answer is D. field2 values are replaced with the value of the field1.

A field alias is a way to associate an additional (new) name with an existing field name. A field alias can be used to normalize fields from different sources that have different names but represent the same data. Field aliases can also be used to rename fields for clarity or convenience1.

When you create a field alias in Splunk Web, you can select the Overwrite Field Values option to change the behavior of the field alias. This option affects how the Splunk software handles situations where the original field has no value or does not exist, as well as situations where the alias field already exists as a field in your events, alongside the original field2.

If you select the Overwrite Field Values option, the following rules apply:

If the original field does not exist or has no value in an event, the alias field is removed from that event.

If the original field and the alias field both exist in an event, the value of the alias field is replaced with the value of the original field.

If you do not select the Overwrite Field Values option, the following rules apply:

If the original field does not exist or has no value in an event, the alias field is unchanged in that event.

If the original field and the alias field both exist in an event, both fields are retained with their respective values.

Therefore, if you create a field alias where field1-field2 and select the Overwrite Field Values option, and an event only contains values for field1, then the value of field2 will be replaced with the value of field1.

NEW QUESTION # 45

Which workflow action method can be used when the action type is set to link?

- A. PUT
- B. Search
- **C. GET**
- D. UPDATE

Answer: C

Explanation:

Explanation/Reference: <https://docs.splunk.com/Documentation/Splunk/8.0.3/Knowledge/SetupaGETworkflowaction>

NEW QUESTION # 46

When performing a regular expression (regex) field extraction using the Field Extractor (FX), what happens when the require option is used?

- A. The events without the required field will not display in searches.
- **B. Only events with the required string will be included in the extraction.**
- C. The regex can no longer be edited.
- D. The field being extracted will be required for all future events.

Answer: B

NEW QUESTION # 47

Which of the following statements describes macros?

- **A. A macro is a reusable search string that must contain only a portion of the search.**
- B. A macro is a reusable search string that must have a fixed time range.
- C. A macro is a reusable search string that may have a flexible time range.
- D. A macro is a reusable search string that must contain the full search.

Answer: A

Explanation:

NEW QUESTION # 48

The time range specified for a historical search defines the _____ .-----questionable on ans

- A. Amount of data shown on the timeline as data streams in
- **B. Amount of data fetched from index matching that time range**
- C. Time range for the static results

Answer: B

Explanation:

Explanation

The time range specified for a historical search defines the amount of data fetched from the index matching that time range. A historical search is a search that runs over a fixed period of time in the past. When you run a historical search, Splunk searches the index for events that match your search string and fall within the specified time range. Therefore, option B is correct, while options A and C are incorrect because they are not what the time range defines for a historical search.

NEW QUESTION # 49

.....

Professional guidance is indispensable for a candidate. As a leader in the field, our SPLK-1002 learning prep has owned more than ten years' development experience.
