

Valid Braindumps Fortinet FCP_FCT_AD-7.4 Book - FCP_FCT_AD-7.4 Real Sheets

Now you need not be worried, if you are run short of time for FCP_FCT_AD-7.4 exam preparation or your tough work schedule doesn't allow you spare time for studying preparatory guides. Relying on BraindumpStudy FCP_FCT_AD-7.4 Dumps will award an easy course to get through the exam and obtain a credential such as FCP_FCT_AD-7.4 you ever desired.

It is never too late to learn. You still have the chance to obtain the FCP_FCT_AD-7.4 certificate as long as you want. What is more, many people have harvest happiness and success after passing the FCP_FCT_AD-7.4 exam. Then you are available for various high salary jobs. You also can become lucky as long as you never give up hopes. Let us make it together. We will be your best friend on your way to get the FCP_FCT_AD-7.4 Certification with our excellent learning braindumps.

FCP_FCT_AD-7.4 Study Guide: FCP - FortiClient EMS 7.4 Administrator & FCP_FCT_AD-7.4 Learning Materials

While most people would think passing Fortinet certification FCP_FCT_AD-7.4 exam is difficult. However, if you choose BraindumpStudy, you will find gaining Fortinet certification FCP_FCT_AD-7.4 exam certificate is not so difficult. BraindumpStudy training tool is very comprehensive and includes online services and after-sales service. Professional research data is our online service and it contains simulation training examination and practice questions and answers about Fortinet Certification FCP_FCT_AD-7.4 Exam. BraindumpStudy's after-sales service is not only to provide the latest exam practice questions and answers and dynamic news about Fortinet FCP_FCT_AD-7.4 certification, but also constantly updated exam practice questions and answers and binding.

Fortinet FCP - FortiClient EMS 7.4 Administrator Sample Questions (Q39-Q44):

NEW QUESTION # 39

Refer to the exhibit.

```

FortiClient logs

```

Why is the user not able to access bbc.com? (Choose one answer)

- A. The endpoint cannot resolve the URL FQDN.
- **B. FortiGuard servers are not reachable from the endpoint.**
- C. The application firewall is blocking Google Chrome.
- D. The URL is blocked by the web filter endpoint profile.

Answer: B

Explanation:

Based on the FortiClient EMS Administrator Study Guide regarding Web Filter troubleshooting and the specific log entries provided in the exhibit, the reason the user cannot access the website is due to connectivity issues with FortiGuard.

1. Analysis of the FortiClient Logs:

* The Error Message: The logs show multiple [ERROR] entries stating: rating_db:97 Category query failure: failed to UrlRequestSendReceive.

* Root Cause Identity: The log explicitly describes the failure: receiveResponse error: FortiGuard server down, task dropped, https bbc.com

* Resulting Action: Because the endpoint could not receive a rating from the FortiGuard servers, the Web Filter module recorded rating: -1 and applied the action WF_ACTION_BLOCK.

2. Why Option C is Correct:

* FortiGuard Dependency: FortiClient's Web Filter module relies on real-time queries to FortiGuard distribution servers to categorize URLs. If the endpoint is behind a firewall blocking FortiGuard ports (typically UDP 53 or 8888, or HTTPS 443) or has no internet path to these servers, it cannot categorize the site.

* Fail-Safe Behavior: In many FortiClient configurations, if a rating cannot be obtained (Category query failure), the default security posture is to block the request to ensure no potentially malicious or unrated

"Unknown" sites are accessed. The logs confirm this by showing the "FortiGuard server down" message immediately followed by the block action.

3. Why Other Options are Incorrect:

* A. The URL is blocked by the web filter endpoint profile: If it were a standard profile block, the log would show a specific Category ID (e.g., Category 52 for News and Media) being blocked by policy. Instead, it shows a rating failure (-1).

* B. The endpoint cannot resolve the URL FQDN: The logs show the process correctly identifies host bbc.com. If DNS had failed, the proxy wouldn't even reach the stage of attempting a FortiGuard category query for that specific URL.

* D. The application firewall is blocking Google Chrome: While the log mentions /opt/google/chrome /chrome, the error is generated by the rating_db and proxy components of the Web Filter, not the Application Firewall module.

NEW QUESTION # 40

When site categories are disabled in FortiClient web filter, which feature can be used to protect the endpoint from malicious web access?

- **A. Web exclusion list**
- B. Real-time protection list
- C. FortiSandbox URL list
- D. Block malicious websites on antivirus

Answer: A

Explanation:

* Web Filter Functionality:

* When site categories are disabled in the FortiClient web filter, the endpoint still requires protection from malicious web access.

* Alternative Protection Features:

* The web exclusion list can be used to manage and block specific URLs that are known to be malicious, providing a way to control and secure web access even without site categories being enabled.

* Conclusion:

* The correct feature that can be used to protect the endpoint in this scenario is the web exclusion list (D).

References:

FortiClient web filter configuration and features from the study guides.

NEW QUESTION # 41

Exhibit.

FortiClient Status - GUI

Refer to the exhibits, which show the Zero Trust Tag Monitor and the FortiClient GUI status.

Remote-Client is tagged as Remote-User* on the FortiClient EMS Zero Trust Tag Monitor.

What must an administrator do to show the tag on the FortiClient GUI?

- A. Change the endpoint alerts configuration to enable tag visibility.
- B. Change the FortiClient system settings to enable tag visibility.
- C. Change the FortiClient EMS shared settings to enable tag visibility.
- D. Update tagging rule logic to enable tag visibility.

Answer: A

Explanation:

* Observation of Exhibits:

* The exhibits show the Zero Trust Tag Monitor on FortiClient EMS and the FortiClient GUI status.

* Remote-Client is tagged as "Remote-Endpoints" on the FortiClient EMS Zero Trust Tag Monitor.

* Enabling Tag Visibility:

- * To show the tag on the FortiClient GUI, the endpoint alerts configuration must be adjusted to enable tag visibility.
 - * Verification:
 - * The correct action is to change the endpoint alerts configuration to enable tag visibility, ensuring that the tag appears in the FortiClient GUI.

FortiClient EMS and FortiClient configuration documentation from the study guides.

NEW QUESTION # 42

An administrator must deploy FortiClient for an organization that has BYOD and remote users. What can the administrator use to deploy FortiClient? (Choose one answer)

- **A. Microsoft Intune**
- B. Microsoft System Center Configuration Manager (SCCM)
- C. FortiClient zero-touch provisioning
- D. Group Policy Object (GPO)

Answer: A

Explanation:

According to the FortiClient EMS Administrator Study Guide and the Fortinet Document Library (7.2/7.4 versions), the most effective method for deploying FortiClient to BYOD (Bring Your Own Device) and remote users is using Microsoft Intune (or other supported Mobile Device Management - MDM solutions).

1. Why Microsoft Intune (Answer C) is the Correct Choice:

* Cloud-Based Accessibility: Unlike GPO or SCCM, which traditionally require a direct connection to the local Active Directory (AD) domain or a VPN to reach the on-premises infrastructure, Microsoft Intune is a cloud-based MDM. This makes it the native choice for remote users who may not always be on the corporate network.

* BYOD Management: Intune is specifically designed to manage a variety of operating systems (Windows, macOS, iOS, Android) that are common in BYOD environments. It allows administrators to push the FortiClient installation package and enrollment configuration (such as the invitation_code or ems_server details) directly to the user's device via the cloud.

* Integration with EMS: FortiClient EMS 7.2/7.4 provides specific documentation for Intune Integration. Administrators can create a custom MSI or .pkg installer in EMS, upload it to Intune, and use Intune's app configuration policies to automate the Telemetry connection to EMS.

2. Why Other Options are Incorrect for this Scenario:

* A. FortiClient zero-touch provisioning: While FortiClient supports zero-touch provisioning (particularly for mobile or through FortiCloud), in the context of a "deployment tool" for an organization's broad BYOD and remote fleet, it is typically a feature or process facilitated by an MDM like Intune rather than the standalone deployment mechanism for the initial software package on third-party remote devices.

* B. Microsoft SCCM: SCCM (now part of Microsoft Configuration Manager) is heavily reliant on on-premises infrastructure and is generally used for corporate-owned, domain-joined devices. It is less flexible than Intune for managing "unmanaged" BYOD devices belonging to remote users.

* D. Group Policy Object (GPO): GPO requires the device to be joined to the Active Directory (AD) Domain. BYOD devices are typically not domain-joined, and remote devices cannot receive GPO updates unless they are connected via VPN at the time of the policy refresh, making it unsuitable for this specific use case.

3. Curriculum References:

* EMS Administration Guide (Deployment Section): Specifies that for endpoints not reachable via AD / Workgroups (which covers remote and BYOD), administrators should use the Installer Link method or an MDM (like Microsoft Intune).

* Intune Deployment Guide for FortiClient: Detail the specific use of Configuration Keys (e.g., cloud_invite_code, ems_server) that are passed from Intune to the FortiClient app to ensure that once the remote user installs the app, it automatically registers to the correct EMS instance.

NEW QUESTION # 43

Which security fabric component sends a notification to quarantine an endpoint after IOC detection in the automation process?

- A. FortiAnalyzer
- B. FortiClient
- C. FortiGate
- **D. FortiClient EMS**

Answer: D

Explanation:

* Understanding the Automation Process:

* In the Security Fabric, automation processes can include actions such as quarantining an endpoint after an IOC (Indicator of Compromise) detection.

* Evaluating Responsibilities:

* FortiClient EMS plays a crucial role in endpoint management and can send notifications to quarantine endpoints.

* Conclusion:

* The correct security fabric component that sends a notification to quarantine an endpoint after IOC detection is FortiClient EMS.
