100% Pass 2026 VTNE: Veterinary Technician National Exam Accurate Exam Vce

There are many benefits after you pass the VTNE certification such as you can enter in the big company and double your wage. Our VTNE study materials boost high passing rate and hit rate so that you needn't worry that you can't pass the test too much. We provide free tryout before the purchase to let you decide whether it is valuable or not by yourself. To further understand the merits and features of our VTNE Practice Engine you could look at the introduction of our product in detail on our website.

AAVSB Veterinary Technician National Exam Sample Questions (Q1272-

Q1277):

NEW QUESTION # 1272

Ferrets under anesthesia must be closely monitored for what complication?

- A. Hypotension
- **B. Hypothermia**
- C. Tachycardia
- D. Malignant hyperthermia

Answer: B

Explanation:

Ferret core body temperature must be carefully maintained while under anesthesia. Due to a ferret's small size, the species is at risk for hypothermia.

Ensure you are monitoring temperatures closely with rectal or esophageal thermometers. Ensure active warming before surgery starts via warmed fluids in conjunction with forced hot air blankets or circulating water blankets. Ensure warming continues throughout the procedure and during recovery. Stop providing heat support once the ferret is awake and alert and the temperature has returned to the normal range (99°F to 104°F).

Malignant hyperthermia is seen in humans and swine primarily.

Hypotension and tachycardia can occur but depend on various factors not specific just to ferrets, including medications administered, pain, anesthetic depth, fluid status, and more.

NEW QUESTION # 1273

In the dispensing of veterinary medications, what does the abbreviation "b.i.d." mean?

- A. Give once daily (or every 24 hours)
- **B. Give twice daily (or every 12 hours)**
- C. Give the medication by mouth
- D. Give three times daily (or every 8 hours)

Answer: B

Explanation:

Veterinary technicians should be familiar with the most commonly used Latin terms in prescription writing. The Latin term "b.i.d." stands for "bis in die," meaning twice in a day. However, for written prescriptions to be filled elsewhere, it is recommended that these abbreviations no longer be used. In human medicine, they now write out "every 12 hours" to minimize the risk of errors.

The abbreviation "t.i.d." means give three times daily (or every eight hours). The abbreviation "q.d." means give once daily (or every 24 hours). The abbreviation "p.o." means to give the medication by mouth.

NEW QUESTION # 1274

What is the most common approach to the abdominal cavity when a horse is undergoing gastrointestinal tract surgery?

- A. A dorsal vulvar labia incision with the horse in a sedated, standing position
- B. A flank incision with the horse in a sedated, standing position
- **C. A ventral midline incision with the horse anesthetized in dorsal recumbency**
- D. A vaginal wall incision with the horse in a sedated, standing position

Answer: C

Explanation:

It is common for horses and foals to require abdominal surgery to treat gastrointestinal tract problems. In horses, the most common approach to the abdominal cavity is an anesthetized patient in dorsal recumbency via a ventral midline incision.

Though less common, a horse may undergo gastrointestinal tract surgery using a flank incision into the abdominal cavity. However, this approach is much less common than the ventral midline approach.

An ovarioectomy is most commonly performed on a horse using a vaginal wall incision with the horse in a sedated, standing position. However, it can be performed using a ventral midline, flank, or paramedian approach.

A Caslick's procedure is performed on a horse using a dorsal vulvar labia incision with the horse in a sedated, standing position.

NEW QUESTION # 1275

Which term describes a radiographic artifact?

- A. Attenuation
- B. Rectification
- C. Ionization
- **D. Summation**

Answer: D

NEW QUESTION # 1276

Urovagina occurs when urine builds up in the vagina of a cow. Urovagina requires surgical correction to do which of the following?

- A. To direct urine cranially
- B. To minimize hemorrhage
- **C. To elongate the urethra**
- D. To relieve obstruction

Answer: C

Explanation:

Urovagina requires surgical correction to elongate the urethra. It is also used to redirect the urine externally by elevating the transverse fold. If urovagina is not corrected, it may cause the cow to become infertile.

Surgical correction for urovagina is not done to relieve obstructions, to direct urine cranially, or to minimize hemorrhage.

Joanna M. Bassert, VMD. McCurmin's Clinical Textbook for Veterinary Technicians, 9th Edition. Pg 1207.

Clinical Anatomy and Physiology for Veterinary Technicians 3rd Edition. Pg 479.

NEW QUESTION # 1277

.....
