**Well-known AD0-E725 Practice Engine Sends You the Best Training Dumps - DumpsTests**

Are you still worried about the actuality and the accuracy of the AD0-E725 exam cram? If you choose us, there is no necessary for you to worry about this problem, because we have the skilled specialists to compile as well check the AD0-E725 Exam Cram, which can ensure the right answer and the accuracy. The pass rate is 98%, if you have any other questions about the AD0-E725 dumps after buying, you can also contact the service staff.

## Adobe Commerce Developer Expert Sample Questions (Q10-Q15):

### NEW QUESTION # 10

A client requests changes to their Pro Staging and Production environments. They supply a Developer with different domains for new websites to be created with the goal of expanding operations to multiple countries, doubling the current number of SKUs, and adding more customer groups.

Which two issues should the Developer anticipate based on the requested changes? (Choose two.)

- A. Recreate hierarchy navigation for every new website.
- B. Multiple websites may require duplicating custom functionality for each store, which increases code redundancy.
- C. Catalog data expands as the number of websites and stores are increased.
- D. Additional stores can lead to a longer indexing process and slower response times for noncached catalog pages.

**Answer: C,D**

Explanation:

When new websites and stores are added in Adobe Commerce:

The catalog data expands because product, price, inventory, and configuration data must be stored per website

/store (B).

Indexing becomes more complex as indexers must recalculate data per website/store, which can increase indexing times and slow down noncached catalog pages (C).

A is incorrect because navigation hierarchy is managed via categories, not recreated per website automatically.

D is incorrect because Magento code is shared across stores; functionality is not duplicated per store.

### NEW QUESTION # 11

A Developer is tasked with extending the GraphQL capabilities of a client's Adobe Commerce project by adding custom attributes to the product query.

Which step should the Developer take to correctly implement this GraphQL customization?

- A. Add `aroundGetList` and `afterGetList` plugins to the `ProductRepositoryInterface` to reflect the new attributes.
- B. Add new attributes in the Adobe Commerce admin panel to reflect the additions.
- C. Extend the `ProductInterface` by creating a `schema.graphqls` file in the custom module's etc directory.

**Answer: C**

### NEW QUESTION # 12

A client expresses disappointment with the underreported engagement and revenue metrics reported by Product Recommendations.

Which limitation or consideration of this service should be communicated to the client?

- A. Product Recommendations does not support insightful engagement and revenue metrics; an additional service contract is required for this feature.
- B. Product Recommendations requires the purchase of an additional license to enable real-time reporting.
- C. Ad blockers and privacy settings can prevent Product Recommendations from capturing shopper behavior.

**Answer: C**

### NEW QUESTION # 13

A Developer is working on an Adobe Commerce store, and the security team has flagged certain inline scripts in the store as vulnerable to potential attacks. The Developer decides to implement Content Security Policies (CSP) to secure the store's

environment.

What will the Developer achieve by taking this action?

- A. Prevent users from accessing certain areas of the website based on their IP address.
- **B. Restrict which resources (scripts, styles, images) are allowed to load on the website.**
- C. Ensure that all user input is sanitized before being processed by the application.

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation (with official references):

The correct answer is C. Restrict which resources (scripts, styles, images) are allowed to load on the website.

Adobe Commerce supports Content Security Policy (CSP), a browser-level security feature that mitigates certain types of attacks such as Cross-Site Scripting (XSS) and data injection attacks.

By defining a CSP in Adobe Commerce, developers can control:

- \* Which scripts can be executed (script-src).
- \* Which stylesheets can be applied (style-src).
- \* Which images and media can be loaded (img-src, media-src).
- \* Whether inline scripts or styles are allowed.

This does not sanitize user input (A) nor restrict user access based on IP addresses (B). Instead, it focuses on restricting the sources of content that the browser can load.

Official Documentation Extracts:

\* "Content Security Policy (CSP) is an added layer of security that helps to detect and mitigate certain types of attacks, including Cross-Site Scripting (XSS) and data injection attacks. CSP works by restricting the sources from which content can be loaded."-

Adobe Commerce DevDocs: Content Security Policy

\* "A CSP allows developers to define approved sources of content that browsers can load. These policies help reduce the risk of malicious content injection in Magento storefronts."- Adobe Commerce Security Guide

#### NEW QUESTION # 14

An Adobe Commerce Developer is tasked with adding a custom tax calculation to the checkout process. In addition to core tax calculations, a legacy code extending core tax calculation classes is also found. The Developer wants to utilize Magento's dependency injection system effectively to meet requirements, ensuring the solution works without modifying the existing core and legacy classes.

What should the Developer implement to achieve this?

- A. Constructor arguments
- **B. Virtual types**
- C. Preferences

**Answer: B**

Explanation:

The correct approach is Virtual types.

Virtual types allow developers to configure existing classes with different constructor arguments and create multiple variations of the same class without modifying the core or legacy code.

Preferences (C) would replace one class with another entirely, which could break the legacy functionality.

Constructor arguments (A) are part of DI but don't allow multiple variants of the same class like virtual types do.
