

C-BCBTP-2502考試|高通過率| 100%通過SAP Certified Associate - Positioning SAP Business Technology Platform as part of SAP Business Suite考試

P.S. PDFExamDumps在Google Drive上分享了免費的2026 SAP C-BCBTP-2502考試題庫：https://drive.google.com/open?id=1ooPcOW_tSZRMxHkvYS8TBa3yKUA3xhOZ

在21世紀這個IT行業如此輝煌的時代，競爭是很激烈的。理所當然的，在IT行業中SAP C-BCBTP-2502認證考試成為了一個很熱門的考試。報名參加考試的人越來越多，並且能通過這個認證考試也是那些雄心勃勃的IT專業人士的梦想。

SAP C-BCBTP-2502 考試大綱：

主題	簡介
主題 1	<ul style="list-style-type: none">Discovering SAP Business Technology Platform: This section of the exam measures the skills of SAP Solution Architects and focuses on positioning the SAP Business Technology Platform within the overall SAP Business Suite strategy. It includes understanding the platform's role in enabling transformation, aligning with enterprise strategy, and supporting digital innovation. Candidates are expected to recognize the relevance of SAP BTP in modern business processes and how it integrates with other SAP offerings.
主題 2	<ul style="list-style-type: none">Illustrating CIO Transformation Delivered by SAP Business Suite: This section of the exam evaluates the skills of IT Transformation Managers and covers the role of SAP Business Suite in delivering value for CIO-led digital transformation. It highlights the significance of SAP's portfolio in enterprise IT, introduces the capabilities of SAP BTP, and shows how it connects with end-to-end processes and industry-specific use cases. Candidates should also be able to identify the key products within SAP BTP and explain how cross-portfolio components integrate to deliver measurable value.

已通過驗證有用的SAP C-BCBTP-2502考試是由SAP公司教育培訓師嚴格研發的

PDFExamDumps擁有SAP C-BCBTP-2502 認證考試的特殊培訓工具，能使你不用花費大量的時間和金錢就可以短時間獲得很多IT技術知識來提升你的技術，很快就能在IT行業中證明你的專業知識和技術。PDFExamDumps的培訓課程是PDFExamDumps的專家團隊利用自己的知識和經驗為SAP C-BCBTP-2502 認證考試而研究出來的。

最新的 SAP Certified Associate C-BCBTP-2502 免費考試真題 (Q34-Q39):

問題 #34

Which SAP BTP service enables businesses to orchestrate and monitor enterprise-wide workflows?

- A. SAP Ariba
- B. SAP Conversational AI
- **C. SAP Workflow Management**
- D. SAP Business Network

答案: C

解題說明:

In the context of the Intelligent Enterprise, business processes often span multiple departments and different software systems. SAP Workflow Management (now largely integrated into the SAP Build Process Automation suite) is the specific BTP service designed to bridge these gaps. It allows organizations to digitize, manage, and operate business processes with high levels of transparency. The service provides a centralized platform to define process flows, set approval limits, and ensure that tasks are routed to the correct stakeholders in a timely manner.

The importance of this service lies in its ability to provide "live process visibility." Unlike traditional siloed workflows, SAP Workflow Management on BTP can pull data from various SAP Business Suite components-like Finance, Procurement, or HR-to create an end-to-end view of a business operation. This orchestration is critical for identifying bottlenecks and improving operational efficiency. While SAP Business Network and SAP Ariba facilitate external collaboration and procurement respectively, they do not provide the underlying technical framework for custom workflow orchestration across the entire enterprise landscape.

By utilizing BTP's workflow capabilities, companies can achieve a higher level of automation and governance, ensuring that business rules are consistently applied across all digital touchpoints, whether the underlying systems are cloud-based or on-premise.

問題 #35

Which of the following SAP BTP components enhances enterprise data governance?

- A. SAP AppGyver
- B. SAP BusinessObjects BI
- **C. SAP Data Intelligence**
- D. SAP Concur

答案: C

解題說明:

Data governance is the practice of ensuring that data is accurate, available, and secure across an organization.

SAP Data Intelligence is the primary component within SAP BTP that addresses this need. It provides advanced metadata management and data cataloging capabilities, which are the foundations of governance. A data catalog acts like a "search engine" for enterprise data, allowing users to understand the origin (lineage), quality, and sensitivity of the information they are working with. In a complex SAP Business Suite environment, data often moves through multiple stages and systems. SAP Data Intelligence tracks this "data lineage," showing how data was transformed as it moved from an ERP system to a reporting dashboard. This transparency is crucial for regulatory compliance (like GDPR) and for building trust in the data used for decision-making. If a financial report looks incorrect, governance tools allow IT to trace the data back to its source to find the error. By positioning Data Intelligence as the governance hub, SAP BTP ensures that the "Intelligent Enterprise" is built on a foundation of high-quality, trusted data. This is a significant differentiator from tools like SAP BusinessObjects (which focuses on reporting) or SAP Concur (which focuses on expenses), as Data Intelligence provides the underlying control layer for the entire data ecosystem.

問題 #36

Which of the following are key features of SAP BTP's Integration Suite? (Choose two).

- A. Restricted integration to SAP-only services.
- B. Prebuilt connectors for SAP and third-party applications.
- C. Manual data processing with no automation.
- D. Built-in API management for secure data exchange.

答案: B,D

解題說明:

The SAP Integration Suite is designed to handle the complexities of a hybrid and heterogeneous IT landscape.

One of its most significant features is the availability of thousands of prebuilt connectors and integration flows for both SAP and third-party applications (such as Salesforce, ServiceNow, and various government portals). These "accelerators" significantly reduce the time and cost associated with integration projects, as developers do not have to build connections from scratch. This allows businesses to achieve a faster "time-to-value" when expanding their digital ecosystem.

Another critical feature is built-in API management. As enterprises move toward microservices and cloud-native applications, the number of APIs (Application Programming Interfaces) increases exponentially. SAP Integration Suite provides a centralized layer to govern, secure, and monitor these APIs. This ensures that data exchange between systems is not only efficient but also highly secure, protecting the enterprise from unauthorized access or data breaches. By combining prebuilt content with robust API governance, SAP BTP enables organizations to create a "composable enterprise" where different systems can be easily connected and reconfigured to meet changing business needs, moving away from the rigid, manual processes of the past.

問題 #37

Which SAP BTP services support AI-driven automation? (Choose two).

- A. SAP AI Core
- B. SAP Business Process Intelligence
- C. SAP Business Network
- D. SAP Concur

答案: A,B

解題說明:

AI-driven automation on SAP BTP is achieved through a combination of foundational infrastructure and process analysis tools. SAP AI Core is a key service that provides a dedicated runtime for AI workloads. It allows developers to manage the entire lifecycle of machine learning models—from training to deployment—at scale. It is designed to handle large datasets and complex computations while ensuring that AI models are transparent and compliant with enterprise standards. By using SAP AI Core, businesses can embed predictive capabilities directly into their business logic.

Complementing this is SAP Business Process Intelligence (part of the SAP Signavio suite). This service uses AI to "mine" data from existing business processes to identify inefficiencies, bottlenecks, and manual tasks that are prime candidates for automation. It provides the "sight" to see where automation is needed, while SAP AI Core provides the "brain" to execute intelligent decisions. Together, these services allow an organization to move beyond simple task automation toward intelligent process transformation. SAP Concur and SAP Business Network, while benefiting from these technologies, are SaaS applications rather than the underlying services that facilitate the creation and management of AI-driven automation workflows within the BTP ecosystem.

問題 #38

How does SAP LeanIX support IT landscape management when integrated with SAP BTP?

- A. By restricting governance of IT landscapes.
- B. By providing enterprise architecture visualization and analysis.
- C. By preventing real-time integration with business processes.
- D. By enforcing manual IT infrastructure tracking.

答案: B

解題說明:

As organizations adopt SAP BTP to build and extend their applications, their IT landscapes can become increasingly complex. SAP LeanIX (now a core part of SAP's enterprise architecture strategy) supports management by providing comprehensive visualization and analysis of the enterprise architecture. When integrated with SAP BTP, LeanIX allows IT leaders to see exactly how different BTP services, cloud applications, and on-premise systems are interconnected. This "map" of the IT landscape is essential for identifying redundant applications, managing technical debt, and ensuring that the IT strategy aligns with business goals.

The positioning of LeanIX alongside BTP is crucial for "Transformation Management." During a move to SAP S/4HANA or a transition to the cloud, LeanIX helps organizations plan their roadmap by showing the impact of changes on the existing architecture. It provides data-driven insights into which applications are critical, which are obsolete, and where there are gaps in security or compliance. By providing this transparency, LeanIX empowers architects to make informed decisions about where to deploy new BTP services. This prevents the "sprawl" of unmanaged cloud services and ensures that the evolution of the SAP Business Suite is organized, cost-effective, and fully aligned with the broader digital transformation objectives of the company.
