AWS-Certified-Cloud-Practitioner Exam is designed for beginners and professionals who are interested in learning about cloud computing and its various applications. The Amazon AWS Certified Cloud Practitioner certification helps in validating an individual's knowledge of AWS Cloud and its core services.

Amazon AWS Certified Cloud Practitioner Sample Questions (Q104-Q109):

NEW QUESTION # 104

Which services use AWS edge locations? (Choose two.)

- A. Amazon RDS
- B. AWS Shield
- C. Amazon ElastiCache
- D. Amazon EC2
- E. Amazon CloudFront

Answer: D,E

Explanation:

Explanation/Reference: <https://www.edureka.co/community/600/what-is-an-edge-location-in-aws>

NEW QUESTION # 105

Which of the following security measures protect access to an AWS account? (Select TWO.)

- A. Create one IAM user and share with many developers and users.
- B. Enable Amazon CloudFront.
- C. Activate multi-factor authentication (MFA) for privileged users.

If you decided to create service accounts (that is, accounts used for programmatic access by applications running outside of the AWS environment) and generate access keys for them, you should create a dedicated service account for each use case. This will allow you to restrict the associated policy to only the permissions needed for the particular use case, limiting the blast radius if the credentials are compromised. For example, if a monitoring tool and a release management tool both require access to your AWS environment, create two separate service accounts with two separate policies that define the minimum set of permissions for each tool.

- D. Enable AWS CloudTrail.
- E. Grant least privilege access to IAM users.

Answer: C,E

NEW QUESTION # 106

Which AWS service helps users audit API activity across their AWS account?

- A. Amazon Inspector
- B. AWS Config
- C. AWS CloudTrail
- D. AWS WAF

Answer: C

NEW QUESTION # 107

Which AWS service or feature is an example of a relational database management system?

- A. Amazon Redshift
- B. Amazon Kinesis Data Streams
- C. Amazon S3 Select
- D. Amazon Athena

Answer: A

Explanation:

Amazon Redshift is a fully managed, petabyte-scale data warehouse service in the cloud. You can start with just a few hundred gigabytes of data and scale to a petabyte or more. This enables you to use your data to acquire new insights for your business and customers. Amazon Redshift is a relational database management system (RDBMS), so it is compatible with other RDBMS applications. You can use standard SQL to query the data.

NEW QUESTION # 108

A company wants to run its applications in the AWS Cloud. The company does not have enough staff to maintain and protect its critical business applications. Which AWS service should the company use to perform these tasks?

- A. Amazon RDS
- B. AWS Shield
- C. AWS Managed Services (AMS)
- D. AWSConfig

Answer: D
