Quiz Snowflake - Professional SOL-C01 Most Reliable Questions

The modern Snowflake world is changing its dynamics at a fast pace. With the Snowflake SOL-C01 certification, you can learn these changes and stay updated all the time. There are other countless Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) certification exam benefits that you can gain after passing the exam. The prominent Snowflake Certified SnowPro Associate - Platform Certification (SOL-C01) certification exam benefits are validation of skills, more career opportunity, salary increment, and the opportunity to become a member of the Snowflake community.

Snowflake Certified SnowPro Associate - Platform Certification Sample Questions (Q180-Q185):

NEW QUESTION # 180

What Snowflake object is used to organize database objects into logical groupings?

- A. Roles
- B. Tables

- C. Schemas
- D. Stages

Answer: C

Explanation:

Schemas serve as logical containers within a database, grouping tables, views, file formats, functions, and other objects.

Roles control access, not organization.

Tables store data but do not group objects.

Stages store files or point to external storage; they are not organizational containers.

NEW QUESTION # 181

A data warehouse contains a table named 'ORDERS' in schema 'SALES'. The current owner of the 'ORDERS' table is the 'ANALYST' role. The compliance team requires that the ownership be transferred to the 'SECURITY ADMIN' role, but without interrupting any existing queries or processes that use the table. What is the recommended approach to transfer ownership with minimal disruption?

- A. Immediately execute 'ALTER TABLE SALES.ORDERS TRANSFER OWNERSHIP TO ROLE SECURITY_ADMIN;'
- B. Create a clone of the 'ORDERS' table, transfer ownership of the clone, then drop the original 'ORDERS' table and rename the clone to 'ORDERS'.
- C. Create a view on top of the 'ORDERS' table, transfer ownership of the view to 'SECURITY ADMIN' , and then drop the original 'ORDERS' table.
- D. Execute 'ALTER TABLE SALES.ORDERS TRANSFER OWNERSHIP TO ROLE SECURITY_ADMIN;' during a scheduled maintenance window when no queries are running.
- E. Create a new table with the same structure as 'ORDERS' , load data into it, grant all privileges to 'SECURITY_ADMIN' and users from 'ANALYST' role, and then drop the original 'ORDERS' table. Finally, rename the new table to 'ORDERS'.

Answer: A

Explanation:

Transferring ownership using 'ALTER TABLE ... TRANSFER OWNERSHIP' is a metadata operation and does not lock or significantly impact existing queries on the table. It's the most straightforward and least disruptive approach. Cloning, creating views, or recreating tables involve significant data operations and downtime, which are undesirable.

NEW QUESTION # 182

A Snowflake administrator needs to determine the default collation setting for a newly created database. Which of the following methods can be used to identify the default collation of the database named 'MY DATABASE'?

- A. SELECT DATABASE COLLATION FROM INFORMATION SCHEMA.DATABASES WHERE DATABASE NAME = 'MY DATABASE';
- B. SELECT followed by SELECT collation FROM INFORMATION_SCHEMA.DATABASES WHERE database_name =
- C. SELECT FROM WHERE option_name = 'COLLATION';
- D. DESCRIBE DATABASE MY DATABASE;
- E. SHOW DATABASES LIKE 'MY DATABASE';

Answer: D

Explanation:

'DESCRIBE DATABASE MY_DATABASE;' will show all properties of the database, including the default collation. 'SHOW DATABASES LIKE 'MY DATABASE'' will also show information about the database but does not guarantee displaying the default collation. Options C, D, and E use the INFORMATION_SCHEMA, which is useful, but option A gives direct and complete metadata.

'DATABASE_OPTIONS' table does not exist in information schema. The most efficient method and recommended way is to use 'DESCRIBE DATABASE'.

NEW QUESTION # 183

Which types of stages are available in Snowflake? (Choose any 2 options)

- A. External
- B. Private
- C. Public
- D. Internal

Answer: A,D

Explanation:

Snowflake provides two main types of stages: Internal stages and External stages. Internal stages reside inside Snowflake and include user stages, table stages, and named internal stages. These offer convenient, secure storage within Snowflake's managed environment. External stages reference cloud storage locations such as AWS S3, Azure Blob Storage, or Google Cloud Storage, enabling integration with external data repositories.

Snowflake does not define a stage type called "Public" or "Private," although stages can be granted secure access. Thus, the correct types are Internal and External stages.

NEW QUESTION # 184

You are working with a table named 'EMPLOYEES' in the 'PUBLIC' schema of the 'COMPANY DATA' database. The table contains sensitive Personally Identifiable Information (PII). You need to implement Dynamic Data Masking to protect the 'EMAIL' and 'SALARY' columns, ensuring that only users with the 'DATA ADMIN' role can view the actual values, while others see masked values for 'EMAIL' and a fixed value of '\$' for 'SALARY'. Which of the following steps are required to achieve this? (Select all that apply)

- A. Grant the 'APPLY MASKING POLICY' privilege to the DATA ADMINS role.
- B. Create a masking policy for the 'SALARY' column that uses the 'MASK' function with a condition to show the actual value for users with the 'DATA ADMIN' role and applies it to the 'EMPLOYEES.SALARY' column.
- C. Create a masking policy for the 'SALARY' column that always returns '\$' and applies it to the 'EMPLOYEES.SALARY' column.
- D. Create a masking policy for the 'EMAIL' column that uses the 'MASK' function with a condition to show the actual value for users with the role and applies it to the 'EMPLOYEES.EMAIL' column.
- E. Create a masking policy for the 'EMAIL' column that uses the 'MASK' function with a condition to show the actual value for users with the role and applies it to the 'EMPLOYEES.EMAIL' column.

Answer: B,E

Explanation:

To achieve Dynamic Data Masking with role-based access, you need to: Create a masking policy for 'EMAIL' that masks the data unless the user has the role (Option B). Create a masking policy for 'SALARY' that returns '\$' for non-SDATA_ADMIN users and shows the actual salary for users (Option D). Option A is incorrect because it does not include the role-based condition. Option C is incomplete; it masks for all users, including DATA_ADMIN. Option E is not necessary since the DATA_ADMIN role doesn't need the APPLY MASKING POLICY, the ownership of the policy enables the admin to view the unmasked data.

NEW QUESTION # 185

.....

There are a lot of excellent experts and professors in our company. In the past years, these experts and professors have tried their best to design the SOL-C01 exam questions for all customers. More importantly, we believe once you finally gain the SOL-C01 certification with our SOL-C01 exam questions and you will find enormous benefits: more enjoyment of life and better relationships and less stress and a better quality of life overall. So it is very significant for you to do everything in your power to pass the SOL-C01 Exam and get the related certification.
