#### NEW QUESTION # 300

During an insider data theft investigation at a software company in San Jose, California, a forensic examiner must select the most appropriate data acquisition format to ensure broad compatibility with analysis tools while avoiding compression and metadata overhead. What format should be chosen by the examiner?

- A. AFF format
- **B. Raw format**
- C. AFF4 format
- D. Proprietary format

**Answer: B**

Explanation:

The correct answer is A because raw format is the most straightforward acquisition format when the priority is maximum compatibility and minimum format-related overhead. In CHFI v11, candidates are expected to understand acquisition formats and choose the one that best fits the investigation. A raw image is essentially a direct bit-for-bit copy of the data without added container features such as embedded metadata structures or compression layers. That simplicity makes it widely supported across forensic tools and platforms. By contrast, AFF and AFF4 were designed to add features such as metadata support, segmentation, and optional compression, which can be useful in many cases but do introduce additional format overhead. Proprietary formats may also include useful features, yet they can limit interoperability depending on the tool ecosystem.

The scenario specifically asks for a format that avoids compression and metadata overhead while remaining broadly compatible, which points directly to raw format. In CHFI-style reasoning, when a question emphasizes universality, simplicity, and minimal encapsulation, raw is the strongest answer because it preserves the evidence in the most tool-neutral and uncomplicated image representation.

#### NEW QUESTION # 301
