Overall, the APICS CSCP Exam is an excellent way for professionals to demonstrate their expertise in supply chain management and to advance their careers in this dynamic and growing field.

Important CSCP Exam Details

To earn the CSCP certification, candidates must pass one exam that covers 3 modules. This test comprises 150 questions, 130 of which are operational, and an additional 20 to complete the pretest options. Overall, you will get a maximum of 3.5 hours to complete this exam. It should be stated that the pretest questions never contribute to the final score in any way. Instead, they serve a critical statistical role to help with creating future exams. This is also a simple reason why they are randomly distributed throughout the CSCP test. However, you must attempt all the questions within the given time limit. Scoring on the CSCP is done on a scale of 200-350. So, anytime you score 300 points and above, you will have satisfied the requirement for attaining the CSCP certification. Any score of 299 points and below will earn you a "Fail" status, and you may have to retake this exam.

So you can buy our CSCP actual test guide without any misgivings. If you have any questions, please you contact us online through the email.

APICS Certified Supply Chain Professional Sample Questions (Q57-Q62):

NEW QUESTION # 57

The most useful inventory costing method which enables purchase price variance analysis is:

- A. first in first out (FIFO) costing.
- B. last in first out (LIFO) costing.
- C. average costing.
- **D. standard costing.**

Answer: D

Explanation:

Standard costing involves assigning expected costs to products, including materials, labor, and overhead. This method allows companies to set cost standards and then analyze variances between the actual costs and the standard costs. Purchase price variance analysis specifically examines the differences between the actual price paid for materials and the standard price. This variance analysis is crucial for identifying cost-saving opportunities and managing purchasing performance. Other costing methods like average costing, LIFO, and FIFO do not provide the same level of detail for analyzing purchase price variances. References:

NEW QUESTION # 58

To participate in C-TPAT, companies must agree to do all of the following EXCEPT:

- A. submit a supply chain security profile questionnaire
- B. communicate C-TPAT guidelines to supply chain partners
- **C. companies don't have an option since participation by businesses is mandatory**
- D. assess the firm's own supply chain security
- E. develop and implement a program to enhance supply chain security

Answer: C

NEW QUESTION # 59

A business is changing from a business to business model to a business to consumer model. Which of the following statements about this supply chain change is true?

- A. Returns from customers will decrease.
- B. Number of supplier orders will increase.
- **C. Number of customer orders will increase.**
- D. Average supplier order size will increase.

Answer: C

Explanation:

Transitioning from a business-to-business (B2B) model to a business-to-consumer (B2C) model typically results in an increased number of customer orders. B2C transactions generally involve smaller order sizes but higher order volumes compared to B2B transactions. The company will need to manage a larger number of individual orders, which may also necessitate adjustments in logistics, inventory management, and customer service processes to accommodate the higher volume of transactions.

NEW QUESTION # 60

A company has determined that products sold to a large, strategic customer have unacceptable low variable margins. Which of the following strategies should the company use to improve profitability of sales to that customer?

- A. Move the production of the products to a low labor cost location.
- **B. Evaluate the products' value to the customer and adjust prices accordingly.**
- C. End the relationship and seek out a profitable customer to replace it.
