

# Portworx-Enterprise-Professional Study Guide Practice Materials and Portworx-Enterprise-Professional Actual Dumps and Torrent - ExamcollectionPass

365 days free upgrades are provided by Pure Storage Portworx-Enterprise-Professional exam dumps you purchased change. To avoid confusion, get the Pure Storage Portworx-Enterprise-Professional practice exam and start studying. To guarantee success on the first try, subject matter experts have created all of the Pure Storage Portworx-Enterprise-Professional Exam Material.

## Pure Storage Portworx-Enterprise-Professional Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Security: This section focuses on Security Engineers and Compliance Officers responsible for enforcing security measures in container storage environments. Topics include managing encryption, access control, and compliance policies to protect stored data.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Business Continuity: This domain measures the skills of Disaster Recovery Planners and IT Continuity Managers in implementing backup, recovery, and failover strategies. It ensures candidates understand how to sustain business operations and data availability using Portworx features.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Observability and Troubleshooting: This section assesses the expertise of Support Engineers and System Administrators in monitoring storage deployments and troubleshooting issues. Candidates learn to use observability tools and techniques to maintain system health and resolve performance problems effectively.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Deploy and Install: This domain targets DevOps Engineers and Infrastructure Specialists and focuses on deploying and installing Portworx storage solutions. It includes configuring and setting up storage clusters to support containerized applications reliably and securely.</li> </ul>
Topic 5	<ul style="list-style-type: none"> <li>Operations and Administration: This section of the exam measures the skills of Storage Administrators and Kubernetes Operators and covers managing cluster operations and administering container storage environments using Portworx. Candidates demonstrate the ability to efficiently manage and operate storage clusters in production environments.</li> </ul>

## Pure Storage Portworx-Enterprise-Professional Valid Exam Pattern, Test Portworx-Enterprise-Professional Dumps.zip

The price of our Portworx-Enterprise-Professional exam materials is quite favourable no matter on which version. As you may find that we have three versions of the Portworx-Enterprise-Professional study braindumps: PDF, Software and APP online. And if you buy the value pack, you have all of the three versions, the price is quite preferential and you can enjoy all of the study experiences. This means you can study Portworx-Enterprise-Professional Practice Engine anytime and anyplace for the convenience these three versions bring.

## Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q70-Q75):

### NEW QUESTION # 70

An administrator deploys Portworx in the "portworx" namespace.

What command should the administrator use to check status of only the Portworx pods?

- A. `kubectl -n portworx get storagecluster`
- **B. `kubectl -n portworx get pods -l name=portworx`**
- C. `kubectl -n portworx get pods -o wide`

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To view the status of only Portworx pods within the "portworx" namespace, administrators should use label selectors with `kubectl`. The command `kubectl -n portworx get pods -l name=portworx` filters pods by the label `name=portworx`, showing only pods related to the Portworx deployment. This is more precise than simply listing all pods with `-o wide`, which includes unrelated pods. Checking Portworx pods' status is crucial for monitoring cluster health, identifying pod restarts, or troubleshooting failures. The Portworx installation manifests and documentation specify labels applied to Portworx pods, enabling operators to filter efficiently. Using this command supports focused operational monitoring and streamlined debugging within Kubernetes environments running Portworx **【Pure Storage Portworx Kubernetes Guide source】** .

### NEW QUESTION # 71

How should a Portworx administrator expose metrics to externally provisioned Prometheus?

- A. Enable metrics in the `storagecluster` object by setting:  
spec:  
  monitoring:  
    exportMetrics: true
- **B. Enable metrics in the `storagecluster` object by setting the following:**  
spec:  
  monitoring:  
    prometheus:  
      exportMetrics: true
- C. Enable metrics in the Portworx cluster by running the command:  
`pxctl service monitoring enable --export-metrics-only`

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

To enable Portworx metrics exposure compatible with external Prometheus servers, administrators must set the `exportMetrics` flag inside the Prometheus monitoring section of the `StorageCluster` spec. The correct configuration is:

```
spec:
  monitoring:
    prometheus:
```

exportMetrics: true

This declarative configuration directs Portworx to expose its internal metrics on Prometheus endpoints, allowing external monitoring tools to scrape these metrics for observability, alerting, and dashboarding. The operator-managed Portworx cluster leverages this configuration for integration with cloud-native monitoring stacks, ensuring seamless visibility into cluster health, performance, and resource utilization. Using CLI commands alone is insufficient for operator-managed clusters since they don't persist settings or integrate with Kubernetes manifests. The official Portworx observability guide and operator documentation endorse this method as the recommended approach for metrics exposure and integration with Prometheus-compatible systems **【Pure Storage Portworx Monitoring Guide source】** .

#### NEW QUESTION # 72

An infrastructure admin wants to restrict installing Portworx in two nodes.  
What label does the node need to have?

- A. px/storage-node=false
- B. px/service=stop
- C. px/enabled=false

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Restricting Portworx installation on certain Kubernetes nodes is achieved by labeling those nodes with px/enabled=false. This label signals the Portworx Operator or installer to exclude these nodes from Portworx deployment. This allows admins to reserve nodes for other workloads or prevent Portworx from running on unsupported hardware. The label px/service=stop or px/storage-node=false are not recognized controls in the Portworx installation process. Portworx deployment guides consistently document the use of px/enabled=false for node exclusion, providing a simple, declarative way to control cluster topology and resource assignment during Portworx installations and upgrades **【Pure Storage Portworx Deployment Guide source】** .

#### NEW QUESTION # 73

Which command shows a summary of the Portworx cluster status?

- A. kubectl get pxstatus
- B. pxctl cluster status
- C. helm list --px

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

The command pxctl cluster status provides a concise summary of the Portworx cluster's health and operational status. This includes node states, storage pool information, volume statuses, and quorum information. It is the primary CLI command for administrators to quickly assess cluster health and detect any issues affecting storage availability or performance. helm list --px is a Helm package management command unrelated to cluster status, and kubectl get pxstatus is not a valid Kubernetes or Portworx command. Portworx documentation recommends pxctl cluster status as an essential monitoring command during routine operations and troubleshooting to ensure the cluster is functioning properly and that all nodes are communicating and healthy **【Pure Storage Portworx CLI Guide source】**

#### NEW QUESTION # 74

Which Portworx component is used to co-locate volumes with pods?

- A. Autopilot
- B. Stork
- C. Volume Placement Strategy

**Answer: C**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Portworx's Volume Placement Strategy ensures that persistent volumes are co-located with the pods that use them, enhancing performance and reducing latency. This strategy involves applying placement rules and constraints that guide Kubernetes scheduler and Portworx storage operations to place data volumes on nodes close to or the same as the pods. Co-location improves I/O throughput and application responsiveness by minimizing network hops between compute and storage resources. While Autopilot automates scaling and Stork manages storage-aware scheduling, Volume Placement Strategy specifically handles volume location relative to workloads. The Portworx architecture documentation highlights this component as critical for optimizing storage efficiency and workload performance in Kubernetes environments running Portworx storage [【Pure Storage Portworx Architecture Docs source】](#).

## NEW QUESTION # 75

.....

Our company according to the situation reform on conception, question types, designers training and so on. Our latest Portworx-Enterprise-Professional exam torrent was designed by many experts and professors. You will have the chance to learn about the demo for if you decide to use our Portworx-Enterprise-Professional quiz prep. We can sure that it is very significant for you to be aware of the different text types and how best to approach them by demo. At the same time, our Portworx-Enterprise-Professional Quiz torrent has summarized some features and rules of the cloze test to help customers successfully pass their exams. More importantly, you have the opportunity to get the demo of our latest Portworx-Enterprise-Professional exam torrent for free, yes, you read that right, and our demo is free. So why still hesitate?
