We also offer you free update for one year, and the update version will be sent to your email automatically.

ATLASSIAN Jira Cloud Administrator Sample Questions (Q73-Q78):

NEW QUESTION # 73
You have two issue types in your HR project: Hire and Fire.
Which two requirements can be met through changes only to field configurations? (Choose two.)

- A. For the Hire issue type, the field description for the Due Date field should read "First day of work".
- B. For the Fire issue type, the default value for the Priority field should be Blocker.
- C. For the Fire issue type, the Description field should have a default value of "Termination".
- D. For both issue types, the Resolution should be set once the issues are being resolved.
- E. For both issue types, the Assignee field should be hidden when creating but not when viewing an issue.
- F. For both issue types, the Employee Name custom field must be required upon creation and must never be blank.

Answer: D,E

NEW QUESTION # 74
George is the project lead of several projects. Now, he needs to create projects but should not have Jira administrator privileges.
What does George need?

- A. Project permission
- B. Project role
- C. Product role
- D. Product access
- E. Global permission

Answer: E

Explanation:
To create projects in Jira Software Cloud without having full Jira administrator privileges, George needs a specific global permission, namely the Create Projects permission. This permission allows users to create new projects without granting them broader administrative access.
* Explanation of the Correct Answer (Option D):
* The Create Projects global permission enables a user to create new projects in Jira. This permission is distinct from Jira administrator privileges, which include managing global settings like schemes, users, and workflows. By granting George this permission, he can create projects while maintaining a limited scope of authority.
* Exact Extract from Documentation:
Global permissions
Global permissions control access to system-wide actions in Jira. The Create Projects permission allows users to create new projects without requiring full Jira administrator privileges.
To grant this permission:
* Go to Settings > System > Global permissions.
* Add a user, group, or role to the Create Projects permission. Note: Users with this permission can create projects but cannot modify global configurations like schemes or user management unless they have additional permissions.(Source: Atlassian Support Documentation, "Manage global permissions")
* Why This Fits: The Create Projects global permission directly addresses the requirement for George to create projects without needing Jira administrator privileges, making Option D the correct choice.
* Why Other Options Are Incorrect:

* Project role (Option A):
* Project roles (e.g., Administrator, Developer) are used within a project's permission scheme to grant project-specific permissions, such asAdminister ProjectsorBrowse Projects. They do not control the ability to create new projects, which is a system-level action.
* Extract from Documentation:
Project roles are used in permission schemes to grant permissions within a specific project. They do not apply to global actions like creating projects.
(Source: Atlassian Support Documentation, "Manage project roles")
* Product access (Option B):
* Product access determines whether a user can use Jira Software or other Atlassian products.
While George needs product access to use Jira, this does not grant the specific ability to create projects.
* Extract from Documentation:
Product access allows users to log in and use Jira products. Specific actions, like creating projects, require global or project permissions.
(Source: Atlassian Support Documentation, "Manage product access")
* Project permission (Option C):
* Project permissions (e.g.,Administer Projects,Browse Projects) are defined in a project's permission scheme and apply to actions within a specific project. Creating a project is a global action, not tied to any existing project's permission scheme.
* Extract from Documentation:
Project permissions control actions within a project, such as editing issues or managing components. Global permissions control system-wide actions like creating projects.
(Source: Atlassian Support Documentation, "Manage project permissions")
* Product role (Option E):
* Product roles (e.g., Jira Software User, Jira Service Management Agent) define access to specific Atlassian products but do not grant permissions for actions like creating projects.
This is not relevant to the requirement.
* Extract from Documentation:
Product roles determine access to Atlassian products and are not related to specific permissions like creating projects.
(Source: Atlassian Support Documentation, "Manage product roles")
* Additional Notes:
* TheCreate Projectspermission can be granted to George via a group or directly to his user account inSettings > System > Global permissions.
* As a project lead, George likely already has project-level permissions (e.g.,Administer Projects for his projects), but these do not extend to creating new projects.

NEW QUESTION # 75
Which configurations do Not have any impact on email notifications sent to users

- A. Workflow post functions
- B. Version Configurations
- C. Custom Events
- D. Premission Schemes

Answer: B

NEW QUESTION # 76
Gary complains that he is not getting any notifications when issues are updated.
According to the notification helper, he should receive notifications for all issues he is watching. His coworkers confirm they receive those notifications and they regularly update issues that he is watching.
Which update to Gary's personal settings must have occurred (Choose one)

- A. The setting Email notifications format was changed
- B. The setting You make changes to the issue was disabled

- C. The setting You're watching the issue was disabled
- D. The setting Watch your issues was disabled

Answer: C

NEW QUESTION # 77
Your business users want to know more about what is happening with the issues raised by their business unit. They gave you a list of situations in which they want to get emails, so you know which parts of the shared notification scheme they want to be added to.
You consult with the project owner.
He doesn't want any changes to the emails that go to developers and testers.
The project owner approves of the business users getting the emails, but he would like to retain control of who gets emails for his project.
How can you satisfy these requests?

- A. Create a role for business users and add that role to the events in the notification scheme.
- B. Place the business users in a group and add that group to the events in the notification scheme.
- C. Modify the events in the workflow so they send the emails to the business users.
- D. Add the business users as Watchers on the issues.

Answer: B

NEW QUESTION # 78
......
