Our Analytics-Admn-201 Research materials design three different versions for all customers. These three different versions include PDF version, software version and online version, they can help customers solve any problems in use, meet all their needs. Although the three major versions of our Analytics-Admn-201 learning materials provide a demo of the same content for all customers, they will meet different unique requirements from a variety of users based on specific functionality. The most important feature of the online version of our Analytics-Admn-201 Learning Materials are practicality. The online version is open to all electronic devices, which will allow your device to have common browser functionality so that you can open our products. At the same time, our online version of the Analytics-Admn-201 learning materials can also be implemented offline, which is a big advantage that many of the same educational products are not able to do on the market at present.

Salesforce Analytics-Admn-201 Exam Syllabus Topics:

Topic	Details
Topic 1	Administration: This section of the exam measures the skills of Tableau Administrators and covers the day-to-day tasks of maintaining Tableau Server. Candidates should understand how to create and manage schedules, subscriptions, backups, and restores, as well as how to use tools such as TSM, Tabcmd, and REST API. It emphasizes monitoring, server analysis, log file usage, and embedding practices. It also includes managing projects, sites, and nested structures, while contrasting end-user and administrator abilities. Knowledge of publishing, web authoring, sharing views, caching, and data source certification is also tested.

Topic 2	Connecting to and Preparing Data: This section of the exam measures the skills of Tableau Administrators and covers the basic understanding of Tableau Server's interface, navigation, and overall topology. Candidates are expected to recognize both client and server components, understand how these interact, and know where to find information about versions, releases, and updates. It also focuses on system requirements, including hardware, operating systems, browsers, email configurations, cloud considerations, and licensing models. Additionally, it examines knowledge of server processes, data source types, network infrastructure, and ports needed for a stable deployment.
Topic 3	Migration & Upgrade: This section of the exam measures the skills of System Engineers and covers the process of upgrading and migrating Tableau Server environments. Candidates should understand how to carry out clean reinstalls, migrate servers to new hardware, and maintain backward compatibility during the process.
Topic 4	Troubleshooting: This section of the exam measures the skills of Support Specialists and covers resolving common Tableau Server issues. Candidates must know how to reset accounts, package logs, validate site resources, rebuild search indexes, and use analysis reports. It also includes understanding the role of browser cookies and creating support requests when needed.
Topic 5	Installation and Configuration: This section of the exam measures the skills of Server Engineers and covers the process of installing Tableau Server, understanding installation paths, identity store options, SSO integrations, SSL setup, and silent installs. Candidates also need to demonstrate the ability to configure Tableau Server by setting cache, distributing processes, customizing sites, and configuring user quotas. It further includes adding users, managing their roles and permissions, and applying Tableau's security model at different levels from sites to workbooks.

Ample Study Material for Salesforce Analytics-Admn-201 Exam Questions - Attain Exam Success

The desktop Salesforce Analytics-Admn-201 exam simulation software works only on Windows, but the web-based Salesforce Analytics-Admn-201 practice exam is compatible with all operating systems. You can take the online Salesforce Analytics-Admn-201 Mock Test without software installation via Chrome, Opera, Firefox, or another popular browser.

Salesforce Certified Tableau Server Administrator Sample Questions (Q81-Q86):

NEW QUESTION # 81

Which two operating systems are supported for a Tableau Server installation? (Choose two.)

- A. Windows Server 2016
- B. Windows 10
- C. Windows Server 2019
- D. Windows 7

Answer: A,C

Explanation:

Tableau Server is designed for production environments and is supported only on server-class operating systems, not desktop operating systems. As of the latest documentation (aligned with knowledge up to March 21, 2025), the supported operating systems for Tableau Server on Windows are:

Windows Server 2016

Windows Server 2019

Windows Server 2022 (added in later versions, but relevant as of 2025).

Desktop operating systems like Windows 7 or Windows 10 are not supported for production installations due to stability, security, and performance requirements.

Option C (Windows Server 2019): Correct. This is a supported server OS for Tableau Server.

Option D (Windows Server 2016): Correct. This is also a supported server OS for Tableau Server.

NEW QUESTION # 82

What Tableau Server authentication method should you configure to use OpenID Connect?

- A. Local Authentication
- B. Kerberos
- C. SAML
- D. Active Directory

Answer: C

Explanation:

Tableau Server supports multiple authentication methods, including Local Authentication, Active Directory, Kerberos, SAML, and OpenID Connect. OpenID Connect (OIDC) is an identity layer built on OAuth 2.0, commonly used for single sign-on (SSO). In Tableau Server, OIDC is implemented as a variant of SAML (Security Assertion Markup Language) authentication because both are SSO protocols managed through the same configuration workflow.

To use OpenID Connect:

* Configure Tableau Server for SAML/SSO.

* Provide an OIDC-compatible identity provider (IdP) configuration (e.g., Google, Okta).

* Set up the IdP metadata and certificates in TSM.

* Option D (SAML): Correct. Tableau Server treats OIDC as a subset of its SAML authentication framework, so you configure it under the SAML settings in TSM.

* Option A (Local Authentication): Incorrect. Local Authentication uses Tableau's internal user database, not an external SSO protocol like OIDC.

* Option B (Kerberos): Incorrect. Kerberos is a network authentication protocol for Windows environments, unrelated to OIDC.

* Option C (Active Directory): Incorrect. AD uses LDAP or Kerberos, not OIDC, for authentication.

Reference: Tableau Server Documentation - "Configure SAML and OpenID Connect" (https://help.tableau.com/current/server/en-us/saml_config.htm).

NEW QUESTION # 83

An organization wants extract-only data sources refreshed automatically every night. What must be configured?

- A. A Backgrounder process and a refresh schedule assigned to the extract
- B. A Search and Browse index rebuild
- C. Kerberos delegation
- D. A live connection setting on the data source

Answer: A

Explanation:

Automatic extract refreshes require both an active Backgrounder process (to execute the job) and a schedule assigned to the extract via the Server or Desktop publishing dialog. Live connections bypass extracts entirely, so that option doesn't apply.

NEW QUESTION # 84

A new engineer reports that he is unable to log on to Tableau Services Manager (TSM) from the initial node of a Windows test cluster. Which account credentials should you instruct the engineer to use?

- A. An account for the Tableau Server administrator
- B. An account with a Creator site role
- C. An account with a Site Administrator role
- D. An account with administrative rights to the computer

Answer: D

Explanation:

Tableau Services Manager (TSM) is the administrative tool for managing Tableau Server's configuration, processes, and topology. To log in to TSM (via the web UI at <https://<server>:8850> or CLI), you need:

* TSM administrator credentials: These are distinct from site roles and are set during installation or reset via tsm reset.

* Local administrative rights: On Windows, the account used to access TSM must be in the local Administrators group on the initial node, as TSM interacts with system-level services.

In a test cluster, the engineer's inability to log in suggests they lack either the correct TSM credentials or sufficient OS-level permissions. Since the question focuses on a Windows environment and "initial node," the most immediate requirement is local administrative rights to run TSM commands or access the UI.

* Option C (An account with administrative rights to the computer): Correct. The engineer must use an account in the local Administrators group on the initial node to authenticate to TSM. After that, they'll need the TSM admin username/password set during installation.

* Option A (An account with a Creator site role): Incorrect. Site roles (e.g., Creator) apply to content access within Tableau Server, not TSM administration.

* Option B (An account with a Site Administrator role): Incorrect. Site Administrators manage site content, not server-level TSM functions.

* Option D (An account for the Tableau Server administrator): Partially correct but incomplete. This likely refers to the TSM admin account, but without local admin rights on the machine, login will fail.

Option C is more precise.

Reference: Tableau Server Documentation - "TSM Authentication" (https://help.tableau.com/current/server/en-us/tsm_overview.htm#authentication).

NEW QUESTION # 85

To which site role can you associate the Viewer user-based license level?

- A. Viewer
- B. Creator
- C. Explorer
- D. Explorer (can publish)

Answer: A

Explanation:

Tableau Server uses a role-based licensing model with three primary license levels: Creator, Explorer, and Viewer. Each license level corresponds to specific site roles that define what users can do on the server.

Viewer License: This is the most restrictive license, allowing users to view and interact with published content (e.g., dashboards and visualizations) but not to create or publish new content.

Site Role: The Viewer license can only be associated with the Viewer site role. This role restricts users to viewing capabilities, aligning with the license's purpose.

Option C (Viewer): Correct. The Viewer site role matches the Viewer license level perfectly.

NEW QUESTION # 86

.....

Usually you may take months to review a professional exam, but with Analytics-Admn-201 exam guide, you only need to spend 20-30 hours to review before the exam, and with our Analytics-Admn-201 study materials, you will no longer need any other review materials, because our learning dumps have already included all the important test points. At the same time, Analytics-Admn-201 Practice Engine will give you a brand-new learning method to review - let you master the knowledge in the course of the doing exercise.
