GAQM Certified Data Centre Specialist (CDCS) Sample Questions (Q35-Q40):

NEW QUESTION # 35

How many approaches are there to remove unwanted heat from an IT environment?

- A. Five
- B. Six
- C. Seven
- D. Four

Answer: A

Explanation:

There are five common approaches to removing unwanted heat from an IT environment:

- * Air conditioning: using mechanical cooling to remove heat from the air.
- * Air economization: using outside air to cool the IT environment when the temperature is cooler than the desired temperature inside the data center.
- * Liquid cooling: using a liquid coolant to absorb and remove heat from IT equipment.
- * Evaporative cooling: using water evaporation to cool the air.
- * Immersion cooling: submerging IT equipment in a liquid coolant to remove heat.

NEW QUESTION # 36

Which system in Air Distribution System takes the hot exhaust air from the IT equipment to the CRAC

- A. Supply system
- B. Regulation system
- C. Maintenance system
- **D. Return system**

Answer: D

Explanation:

The return system in an air distribution system takes the hot exhaust air from the IT equipment and returns it to the Computer Room Air Conditioner (CRAC) unit. The CRAC unit cools the hot exhaust air and recirculates it back into the data center. The return system typically includes ducts, grills, and other components that allow the hot air to be efficiently and effectively returned to the CRAC unit.

Supply system is responsible for bringing in the cooled and filtered air from the CRAC unit to the data center.

Maintenance system and regulation system are not related to air distribution system in the data center.

NEW QUESTION # 37

True or False: Human error is a major cause of data center downtime

- **A. True**
- B. False

Answer: A

Explanation:

Human error is a major cause of data center downtime. Human mistakes are one of the top causes of data center outages, accounting for around one-third of all downtime incidents. Common causes of human error in data centers include misconfiguration, inadequate maintenance, and improper security practices. To reduce the risk of human error, it is important to ensure that data center staff receive proper training, have adequate access control measures in place, and are familiar with best practices for data center operations.

NEW QUESTION # 38

For which one of these processes is Direct Current essential, and will not work with alternating current?

- A. Lighting
- **B. Electrolysis**
- C. Heating
- D. Turning a motor

Answer: B

Explanation:

Explanation

Direct Current (DC) is essential for the process of electrolysis. Electrolysis is the process of breaking down a compound using an electric current. The electric current causes ions to move, which results in a chemical reaction that breaks down the compound. In

order for electrolysis to work, a direct current is required, as the ions must flow in one direction. Alternating Current (AC) changes direction and would not provide a consistent flow of ions.

Heating, lighting, and turning a motor can be done by either DC or AC. Heating can be done by passing an electric current through a heating element, which can be powered by either DC or AC. Lighting can be done by passing an electric current through a light bulb, which can be powered by either DC or AC. A motor can be powered by either DC or AC, but the type of motor and the application will determine which type of current is more suitable.

NEW QUESTION # 39

Which type of power can be a source available to the data center that takes over the function of supplying when utility power is unavailable?

- A. Passive
- **B. Standby**
- C. Alternate
- D. Active

Answer: B

Explanation:

Standby power, also known as backup power, is a type of power that can be a source available to the data center that takes over the function of supplying when utility power is unavailable. Standby power systems are designed to provide power to critical loads in the event of a power outage, and can include generators, uninterruptible power supplies (UPS), and batteries. Standby power systems can be used to provide power to the data center for a short period of time, such as a few hours or days, until utility power is restored.

Passive, Active and Alternate are not specific type of power sources used in data center. They are terms used in different context and have different meaning.
