# Pass Guaranteed 2026 Nutanix Newest NCP-MCA: Exam Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Questions Pdf

2026 Latest TestPassKing NCP-MCA PDF Dumps and NCP-MCA Exam Engine Free Share: https://drive.google.com/open?id=1kRZTbcNSqVfWKe340phUZiuTe0mCir3P

The TestPassKing Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) exam dumps are being offered in three different formats. All these three NCP-MCA exam dumps formats contain the real Nutanix NCP-MCA exam questions that will help you to streamline the NCP-MCA Exam Preparation process. The TestPassKing Nutanix NCP-MCA PDF dumps file is a collection of real, valid, and updated NCP-MCA practice questions that are also easy to install and use.

The NCP-MCA certification exam is open to professionals who have experience in multicloud automation and are familiar with Nutanix technologies. Candidates are required to have a minimum of two years of experience in IT infrastructure and operations, as well as a strong understanding of automation tools and techniques. Candidates who pass the NCP-MCA certification exam are awarded the Nutanix Certified Professional - Multicloud Automation (NCP-MCA) certification, which is recognized by industry leaders and demonstrates the candidate's expertise in multicloud automation.

The NCP-MCA exam covers a range of topics, including Nutanix Calm, which is Nutanix's automation and orchestration platform. Candidates will be tested on their ability to use Calm to automate application deployment, scaling, and management across multiple clouds. NCP-MCA Exam also covers Nutanix Era, which is a database-as-a-service platform designed to simplify database provisioning, management, and lifecycle operations. Other topics covered by the exam include Nutanix Xi Leap, which is a disaster recovery and business continuity solution, and Nutanix Files, which is a software-defined file storage solution.

With our APP online version of our NCP-MCA learning guide, the users only need to open the App link, you can quickly open the learning content in real time in the ways of the NCP-MCA study materials, can let users anytime, anywhere learning through our App, greatly improving the use value of our NCP-MCA Exam Prep, but also provide mock exams, timed test and on-line correction function, achieve multi-terminal equipment of common learning.

Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) Sample Questions (Q47-Q52):

NEW QUESTION # 47
With the Prism Viewer role, what operations are allowed to be performed?

- A. Analyze playbooks plays and action gallery.
- B. Create clone and update a playbook.
- C. Clone, read and update action template in the action gallery.
- D. Stop or resume a playbook that is in running state.

Answer: A

Explanation:
The Prism Viewer role in Nutanix Prism Central is a read-only role. Users with this role can view and analyze various elements within Prism Central, including playbooks and the action gallery, but they cannot perform any modifications or operational tasks such as stopping or resuming a playbook, cloning, or updating templates.

Nutanix Best Practices for Role-Based Access Control.

NEW QUESTION # 48
A developer updated a blueprint to ensure that the IP address of the VM is reserved in IPAM as part of the deployment process.
The developer noticed that when new VMs are created, they still get a DHCP IP address and not a reserved IP address.
What is the most likely reason for this behavior?

- A. Developer created a pre-create task for reserving the IP address
- B. Developer forgot to publish the updated blueprint
- C. Developer created a post-create task for reserving the IP address
- D. Developer forgot to save the updated blueprint

Answer: C

Explanation:
The most likely reason for this behavior is that the developer created a post-create task for reserving the IP address. A post-create task is executed after the VM is created and powered on, which means that the VM already obtained a DHCP IP address before the task is run. To reserve the IP address in IPAM as part of the deployment process, the developer should create a pre-create task instead. A pre-create task is executed before the VM is created and powered on, which allows the task to reserve the IP address in IPAM and assign it to the VM. NEW QUESTION # 49
Which two features does the Calm Marketplace provide? (Choose two.)

- A. Published and versioned Blueprints
- B. Store of all Blueprints created in Calm
- C. Set of pre-seeded application Blueprints
- D. Library of executable tasks

Answer: A,C

Explanation:
The Calm Marketplace acts as an application store, providing end users with a catalog of available applications. By default, Calm comes pre-seeded with validated Blueprints for multiple open source and enterprise applications. These are the set of pre-seeded application Blueprints. Additionally, Marketplace Manager acts as a staging area for publishing default and user-created Blueprints to your local Marketplace. These are the published and versioned Blueprints. The other two options, library of executable tasks and store of all Blueprints created in Calm, are not features of the Calm Marketplace. NEW QUESTION # 50
What are Self-Service (formerly Calm) Substrates?

- A. Substrates are runbooks used to accomplish a particular task on an app
- B. Substrates are part of a templating language for Self-Service scripts. These are evaluated by the Self-Service execution before the script is run.
- C. Substrates are a combination of the underlying cloud and the virtual machine instance.
- D. Substrates use install and Uninstall operations run when a blueprint is first launched or when the entire app is finally deleted.

Answer: C

Explanation:
In Nutanix Self-Service (formerly known as Calm), substrates refer to the combination of the underlying cloud infrastructure and the virtual machine instances. Substrates define the environment where applications will be deployed and managed, encompassing cloud providers, virtualization platforms, and the associated VM configurations.
Reference:
Nutanix Calm documentation on Substrates.
Nutanix Best Practices for Application Deployment.

NEW QUESTION # 51
An administrator reports that their Self-Service Project is showing Environments with production clusters.
The Project was intended to only include the development cluster.
What is the most likely cause?

- A. Project scope whitelists production and development Environments, so it is working as implemented.
- B. Project scope whitelists production and development infrastructure, so it is working as implemented.
- C. VM template is incorrectly categorized, which should not affect Project visibility.
- D. Blueprint is misconfigured and blueprint needs to remove infrastructure resources.

Answer: B

Explanation:
The visibility of clusters within a Self-Service Project is strictly controlled by the Infrastructure (or Accounts) configuration within the Project settings.
* Infrastructure Whitelisting:When configuring a Project, the administrator must select which Accounts and Clusters are available for use. This is often referred to as defining the Project Scope or whitelisting infrastructure.
* The Cause:If users can see and create Environments targeting "Production Clusters," it is because the administrator explicitly selected (whitelisted) those Production Clusters in the Project's Infrastructure tab.
* Environments vs. Infrastructure:Environments are definitions created using the allowed infrastructure.
Option D is less accurate because you whitelist the Infrastructure (resources), and then Environments are created on top of them. The root cause of the resource availability is the infrastructure whitelist in the Project Scope.

NEW QUESTION # 52
......

So it requires no special plugins. The web-based Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) practice exam software is genuine, authentic, and real so feel free to start your practice instantly with Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) practice test. It would be really helpful to purchase Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) exam dumps right away. If you buy this Nutanix Certification Exams product right now, we'll provide you with up to 1 year of free updates for Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) authentic questions. You can prepare using these no-cost updates in accordance with the most recent test content changes provided by the Nutanix Certified Professional - Multicloud Automation (NCP-MCA 6.10) (NCP-MCA) exam dumps.
