UiPath Agentic Automation Associate Sample Questions (Q11-Q16):

NEW QUESTION # 11

A Citrix Administrator is configuring a Citrix Virtual Desktops Site for use with a mirrored SQL Server database. Which setting In SQL is important that the administrator configure manually when creating an empty database on the principal SQL Server?

- A. SQL Mirroring Version
- B. Database Type Setting
- C. SQL Version Number
- **D. Collation Setting**

Answer: D

Explanation:

When configuring a Citrix Virtual Desktops Site with a mirrored SQL Server database, the collation setting must be configured manually and must match across all SQL Servers in the mirroring setup. Citrix relies on consistent collation to ensure proper database functionality.

NEW QUESTION # 12

A Citrix Administrator wishes to deploy catalogs of machines using Machine Creation Services. Which two things must be configured and setup to accomplish this? (Choose two.)

- A. Citrix Policies
- B. NetScaler Gateway
- **C. Citrix Delivery Controller**
- D. Citrix StoreFront
- **E. Hosting Connection**

Answer: C,E

Explanation:

To deploy machine catalogs with Machine Creation Services (MCS), a hosting connection (to the hypervisor or cloud environment) must be configured to provide resources, and a Delivery Controller must be available to manage provisioning and brokering of the machines.

NEW QUESTION # 13

Scenario: A Citrix Administrator configures the 'Auto connect client drives' user settings to map client drives within the HDX session for all published desktops. The setting is configured in a Baseline Group Policy Object (GPO) and linked to an Organizational Unit (OU) that contains all of the published desktops. When a user launches the desktop, client drives are NOT mapped. What is a possible reason?

- **A. Loopback processing is NOT enabled.**
- B. The GPO needs to be linked to the User OU.

- C. gpupdate /force needs to be executed on all of the machines.
- D. Desktops need to be restarted for the policy to be applied.

Answer: A

Explanation:

User settings in a GPO linked to a machine OU only apply if loopback processing is enabled.

Since the "Auto connect client drives" setting is a user policy but applied at the desktop OU level, loopback processing must be enabled for the policy to take effect within the HDX sessions.

NEW QUESTION # 14

Scenario: A user is working on a document in an HDX session and saves data on the desktop.

The Virtual Delivery Agent (VDA) session abruptly crashes, causing the saved data to be lost.

Which Citrix Profile Management policy can a Citrix Administrator enable to prevent data loss?

- **A. Active Write Back**
- B. Delay Cached Profile Deletion
- C. Profile Caching
- D. Profile Streaming

Answer: A

Explanation:

Active Write Back ensures that changes made during the session, such as saving files to the desktop, are written back to the user profile in real time. This prevents data loss if the VDA session crashes unexpectedly.

NEW QUESTION # 15

Scenario: A Citrix Administrator needs to create local user accounts for other administrators with limited privileges. The other administrators will need only:

- Read-only access
 - The ability to enable and disable services and servers
- Which built-in Command Policy permission level can the administrator use?

- A. Read-Only
- B. Network
- C. Sysadmin
- **D. Operator**

Answer: D

NEW QUESTION # 16
