Using C-SEC-2405 Authorized Test Dumps Makes It As Relieved As Sleeping to Pass SAP Certified Associate - Security Administrator

TestPassed is the website that has been known to learn IT technology. TestPassed gets high praise from our customers in real test questions and answers. It is the real website that can help you to pass SAP C-SEC-2405 certificate. Why is TestPassed very popular? Because TestPassed has a group of IT elite which is committed to provide you with the best test questions and test answers. Therefore, TestPassed will provide you with more and better certification training materials to satisfy your need.

SAP Certified Associate - Security Administrator Sample Questions (Q72-

Q77):

NEW QUESTION # 72

In SAP S/4HANA Cloud Public Edition, what does the ID of an SAP-predefined Space refer to?

- A. The business roles it is to be assigned to
- B. The SAP Fiori applications it was defined for
- C. The software release it was created for
- **D. The business area it was designed for**

Answer: D

Explanation:

In SAP S/4HANA Cloud Public Edition, the ID of an SAP-predefined Space refers to the business area it was designed for. Spaces in the SAP Fiori launchpad are organizational units that group Fiori apps and tiles relevant to specific business functions, such as finance, procurement, or human resources. The ID of a predefined Space reflects this business area, providing a clear and intuitive way to organize applications for users based on their functional roles. This design enhances user experience by ensuring that relevant apps are easily accessible within a business context. The ID does not refer to the software release, as Spaces are release-independent, nor to specific Fiori applications or business roles, which are assigned separately via catalogs and roles. By tying the Space ID to the business area, SAP ensures that the Fiori launchpad aligns with organizational processes, supporting efficient navigation and access control while maintaining a user-centric and business-focused interface.

NEW QUESTION # 73

Which protocol is the industry standard for provisioning identity and access management in hybrid landscapes?

- A. SSL
- B. OIDC
- C. SAML
- **D. SCIM**

Answer: D

Explanation:

The System for Cross-domain Identity Management (SCIM) is the industry standard protocol for provisioning identity and access management in hybrid landscapes. SCIM enables automated user provisioning and deprovisioning across different systems, including cloud and on-premise environments, by standardizing the exchange of user identity data. It supports operations like creating, updating, and deleting user accounts, making it ideal for managing identities in hybrid SAP landscapes where integration between SAP Cloud Identity Services and on-premise systems is required. SAML (Security Assertion Markup Language) is used for single sign-on authentication, not provisioning. OIDC (OpenID Connect) is an authentication protocol built on OAuth, and SSL (Secure Sockets Layer) is a security protocol for data encryption, not identity provisioning. SCIM's role as a provisioning standard ensures efficient and secure identity management, reducing administrative overhead and enhancing interoperability in complex SAP and non-SAP hybrid environments.

NEW QUESTION # 74

Which user type in SAP S/4HANA Cloud Public Edition is used for API access, system integration, and scenarios where automated data exchange is required?

- A. SAP Administrative User
- B. SAP Support User
- C. SAP Technical User
- **D. SAP Communication User**

Answer: D

NEW QUESTION # 75

Which of the following rules does SAP recommend you consider when you define a role-naming convention for an SAP S/4HANA on-premise system? Note: There are 3 correct answers to this question.

- A. Role names can be no longer than 20 characters
- B. Role names are system language-dependent
- C. Role names can be no longer than 30 characters
- D. Role names must NOT start with "SAP"
- E. Role names are system language-independent

Answer: C,D,E

Explanation:

When defining a role-naming convention in an SAP S/4HANA on-premise system, SAP recommends the following rules:

- * Role Names Must NOT Start with "SAP" (A):
- * The prefix "SAP" is reserved for standard roles delivered by SAP.
- * Custom roles should use a different prefix to avoid confusion and potential conflicts during upgrades or support packages.
- * Role Names Are System Language-Independent (B):
- * Role names should be consistent across different language settings.
- * Using language-independent names ensures that roles are easily identifiable and maintainable regardless of the system's logon language.
- * Role Names Can Be No Longer Than 30 Characters (E):
- * The maximum length for role names is 30 characters.
- * Keeping within this limit ensures compatibility with SAP standards and avoids issues in role assignment and maintenance.

NEW QUESTION # 76

What authorization object can be used to authorize an administrator to create specific authorizations in roles?

- A. S_USER_AGR
- B. S_USER_TCD
- C. S_USER_VAL
- D. S_USER_AUT

Answer: D

Explanation:

The authorization object S_USER_AUT is used to authorize an administrator to create specific authorizations in roles within SAP systems. This object controls access to authorization maintenance tasks, such as defining and modifying authorization objects and values in transaction PFCG. By assigning S_USER_AUT with appropriate values, administrators can be granted permissions to create or change authorizations within roles, ensuring that only authorized personnel can define access rights. This is critical for maintaining security and segregation of duties in role management. S_USER_VAL is used for maintaining authorization values, S_USER_TCD controls access to specific transactions, and S_USER_AGR manages role assignments, none of which directly address creating authorizations. S_USER_AUT's role in authorization maintenance ensures that administrators can securely configure roles while adhering to organizational security policies, preventing unauthorized changes to access controls and supporting compliance with audit requirements in SAP environments.

NEW QUESTION # 77

.....

As the authoritative provider of C-SEC-2405 actual exam, we always pursue high pass rate compared with our peers to gain more attention from those potential customers. We guarantee that if you follow the guidance of our C-SEC-2405 learning materials, you will pass the exam without a doubt and get a certificate. Our C-SEC-2405 Exam Practice is carefully compiled after many years of practical effort and is adaptable to the needs of the C-SEC-2405 exam.
