Fortinet FCSS - SD-WAN 7.4 Architect Sample Questions (Q62-Q67):

NEW QUESTION # 62
Refer to the exhibit that shows an SD-WAN zone configuration on the FortiManager GUI.
Based on the exhibit, how will the FortiGate device behave after it receives this configuration?

- A. The configuration instructs FortiGate to establish shortcuts only when at least two members meet the SLA target.
- B. The configuration instructs FortiGate to establish shortcuts only for overlay interfaces that meet the SLA target HUB1_HC.
- C. The configuration instructs FortiGate to choose an ADVPN shortcut based on SD-WAN information.
- D. The configuration instructs FortiGate to allow ADVPN shortcuts for the tunnels of this SD-WAN zone.

Answer: A

Explanation:
This is because the setting minimum-sla-meet-members = 2 requires at least two SD-WAN zone members (in this case, HUB2-VPN1, HUB2-VPN2, and HUB2-VPN3) to pass the defined SLA health check (HUB1_HC) before the FortiGate will establish ADVPN shortcuts. If fewer than two members meet the SLA, shortcuts will not be created.

NEW QUESTION # 63
When you use the command diagnose sys session list, how do you identify the sessions that correspond to traffic steered according to SD-WAN rules?

- A. You identify sessions steered according to SD-WAN rules with the data vwl_mbr_seq.
- B. You cannot identify SD-WAN sessions. You must use the sdwar. session filter.
- C. You identify sessions steered according to SD-WAN rules with the flag vwl.
- D. You identify sessions steered according to SD-WAN rules with the data 3dwan_service_id.

Answer: D

Explanation:
When using the diagnose sys session list command, SD-WAN-specific session steering is indicated by the presence of the sdwan_service_id field in the session data. This identifier ties the session directly to a specific SD-WAN rule or service. As noted in the Fortinet documentation: "Sessions that are handled according to SD- WAN rules will include a service ID tag (sdwan_service_id) in their session listing. This allows administrators to correlate live sessions with SD-WAN policy matches for troubleshooting and visibility." This is a crucial diagnostic tool, as it distinguishes between traffic managed by traditional routing and that explicitly controlled by SD-WAN steering logic, aiding in operational insight and troubleshooting.

NEW QUESTION # 64
You configured an SD-WAN rule with the best quality strategy and selected the predefined health check, Default_FortiGuard, to check the link performances against FortiGuard servers.
For the quality criteria, you selected Custom-profile-1.
Which factors does FortiGate use, and in which order. to determine the link that it should use to steer the traffic?

- A. Links that meet the SLA targets - Member configuration order - Member local cost
- B. Link quality index - Member configuration order - Link cost threshold
- C. Latency - Member configuration order - Link cost threshold
- D. Latency - Jitter - Packet loss - Bibandwidth - Member configuration order

Answer: A

Explanation:
With the Best Quality strategy, FortiGate first checks which links meet the SLA targets defined in the selected performance SLA (in this case, Custom-profile-1). Among those qualified links, FortiGate then uses the member configuration order to decide preference. If multiple links still qualify, it finally considers the member local cost to select the best path.

NEW QUESTION # 65
Refer to the exhibit.An administrator checks the status of an SD-WAN topology using the FortiManager SD-WAN monitor menus. All members are configured with one or two SLAs. Which two conclusions can you draw from the output shown? (Choose two.)

- A. branch2_fgt establishes six tunnels to the hubs and they are all up.
- B. One member of branch2_fgt is missing the SLAs.
- C. The template view should be used to see the hub devices.
- D. This SD-WAN topology contains only two branch devices.

Answer: B,D

NEW QUESTION # 66
Refer to the exhibit.
An administrator configures SD-WAN rules for a DIA setup using the FortiGate GUI. The page to configure the source and destination part of the rule looks as shown in the exhibit. The GUI page shows no option to configure an application as the destination of the SD-WAN rule Why?

- A. You cannot use applications as the destination when FortiGate is used for a DIA setup.
- B. You must enable the feature first using the GUI menu System > Feature Visibility.
- C. You must enable the feature on the CLI.
- D. FortiGate allows the configuration of applications as the destination of SD-WAN rules only on the CLI.

Answer: A
