

# Relativity RCA Real Dumps Free & Pass4sure RCA Pass Guide

Everybody knows that in every area, timing counts importantly. With the advantage of high efficiency, our RCA learning quiz helps you avoid wasting time on selecting the important and precise content from the broad information. In such a way, you can confirm that you get the convenience and fast from our RCA Study Guide. With studying our RCA exam questions 20 to 30 hours, you will be bound to pass the exam with ease.

You may face many choices of attending the certificate exams and there are a variety of certificates for you to get. You want to get the most practical and useful certificate which can reflect your ability in some area. If you choose to attend the test RCA certification buying our RCA exam guide can help you pass the test and get the valuable certificate. Our company has invested a lot of personnel, technology and capitals on our products and is always committed to provide the top-ranking RCA Study Material to the clients and serve for the client wholeheartedly.

>> **Relativity RCA Real Dumps Free** <<

## Pass4sure RCA Pass Guide | New RCA Exam Pass4sure

Our service tenet is to let the clients get the best user experiences and be satisfied. From the research, compiling, production to the sales, after-sale service, we try our best to provide the conveniences to the clients and make full use of our RCA study materials. We organize the expert team to compile the RCA Study Materials elaborately and constantly update them. To let the clients have a fundamental understanding of our RCA study materials, we provide the free trials before their purchasing.

## Relativity Certified Administrator Sample Questions (Q40-Q45):

### NEW QUESTION # 40

What situation can lead to a production error?

- A. Producing the image version of an unresponsive document.
- B. Producing the native file of a document that has redactions.
- C. Producing a document that exceeds the maximum number of allowed redactions.
- **D. The same document is found in multiple data sources.**

**Answer: D**

Explanation:

The correct answer is D. The same document is found in multiple data sources. Relativity's official production documentation identifies this as a staging error . When the same document appears in more than one production data source within a single production set, Relativity generates an error message identifying the overlapping data sources and the duplicate document. This must be corrected before the production can proceed successfully.

This behavior exists because Relativity production data sources are intended to define a clear, non-conflicting set of documents and related production settings. If the same document is pulled from multiple data sources, the system cannot reliably determine which source configuration should govern that document for the production. As a result, Relativity stops the process and requires the administrator to resolve the overlap by adjusting the saved searches used as data sources.

The other options are not the documented production error in this context. Relativity does not identify "too many redactions" as the standard production error described here. Producing the image version of an unresponsive document is a review judgment issue, not a system production error. Producing a native file for a redacted document may raise workflow concerns, but it is not the specific documented staging error addressed by the production help pages. Therefore, the correct answer is D .

#### NEW QUESTION # 41

When you export a Relativity application, what file type is used?

- **A. RAP**
- B. ZIP
- C. RAR
- D. TAR

**Answer: A**

Explanation:

The correct answer is D. RAP . Relativity's official application export documentation states that when you export an application, Relativity produces a RAP file . The documentation explicitly says that after the export completes, you can find the RAP file in the selected folder and then upload that file to the target workspace or Relativity instance for deployment. This is the standard application package format used by Relativity for moving custom or configured applications between environments.

This matters in case administration because administrators frequently manage applications across workspaces and instances, including exporting custom objects, views, layouts, scripts, event handlers, and other application components. Knowing that the package format is .rap is essential when promoting configurations between development, test, and production environments. The other options are generic archive formats that may be familiar in general computing, but they are not the official Relativity application package type.

Relativity also refers throughout its application installation and export documentation to installing or uploading .rap files , which reinforces that this is the correct and platform-specific answer. Therefore, from an RCA perspective, the correct answer is RAP , because that is the documented file type generated when a Relativity application is exported.

#### NEW QUESTION # 42

What setting is needed to have the Prioritized Review queue refresh automatically through Review Center?

- A. Once enough documents are coded it will automatically refresh.
- B. Review Center only queues specific documents from the saved search.
- C. The queue will only refresh when a Reviewer enters the queue and codes at least 10 documents.
- **D. "Queue Refresh" must be set to "On".**

**Answer: D**

Explanation:

The correct answer is A. "Queue Refresh" must be set to "On". Relativity's Review Center admin documentation states that Queue Refresh controls whether the queue automatically refreshes after coding activity . For prioritized review queues, that refresh includes re-running the saved search, checking for outside-coded documents, retraining the classifier, and re-ranking documents based on the

latest coding. That makes Queue Refresh the setting required for automatic queue refreshing.

Relativity also documents that prioritized review queues auto-refresh when there has been a 20% change in total coded documents, and additionally after 8 hours if there has been coding activity. Those are auto-refresh conditions, but they do not replace the need for the Queue Refresh setting itself. Option B therefore describes a trigger condition, not the required setting. Options C and D are not documented as the needed configuration for automatic refresh. Therefore, the correct answer is that Queue Refresh must be turned on .

#### NEW QUESTION # 43

What is the default production sort order?

- A. Family group
- B. Control number
- C. Custodian
- **D. Artifact ID**

**Answer: D**

Explanation:

The correct answer is A. Artifact ID. Relativity's official Production Sets documentation states that in the Sorting section of a production, if no custom sort criteria are selected, the default sort order is Artifact ID , which Relativity describes as the load order of the documents. This is the platform's documented default for productions.

This is an important administrative detail because production sort order affects how documents are sequenced when a production is generated. Relativity also notes that when you apply a custom sort order, family groups are not kept together automatically , so administrators need to design sort strategies carefully if they want a specific production sequence. But absent any special configuration, Relativity defaults to Artifact ID.

The other options are not the documented default. Family group may be relevant in review workflows, but not as the production default sort order. Control number is also not the starting sort value because control numbers may be assigned independently of the production sort configuration. Custodian is a common field for review and QC, but again not the production default. Therefore, the correct answer is A. Artifact ID .

#### NEW QUESTION # 44

How many files can you upload at one time using Simple File Upload?

- A. 0
- **B. 1**
- C. 2
- D. 1,000

**Answer: B**

Explanation:

The correct answer is C. 100 . According to Relativity's official Simple File Upload documentation, the SFUMaxFilesToUpload instance setting determines the maximum number of documents a user can upload at one time using Simple File Upload. Relativity states that administrators can configure this setting up to 100 files , and when the setting is at its maximum, users can upload up to 100 files at one time . If a user selects more than 100 files, Relativity uploads only the first 100 selected files and does not upload the remainder.

Relativity also indicates that a warning message appears in the upload window when more than 100 files are selected.

This makes the answer operationally important for administrators because Simple File Upload is designed for lightweight, direct document uploads within a workspace, not for large-scale ingestion jobs. For more substantial data loading exercises, administrators typically use Relativity's broader import workflows rather than relying on Simple File Upload. From an RCA perspective, knowing this limit helps with user support, upload troubleshooting, and setting expectations for workspace users who need to add small batches of documents quickly. Therefore, among the options given, 100 is the only choice that aligns with the official Relativity behavior for Simple File Upload.
