## ISTQB Certified Tester Usability Tester Sample Questions (Q11-Q16):

### NEW QUESTION # 11

You're redesigning the web shop of a customer and found out that they are using legacy web design techniques like HTML tables for design matters, making the website hard to be operated using alternative input and output devices (e.g. screen readers). Which kind of risk is most likely to occur?

- A. Accessibility risk
- B. User experience risk
- C. Usability risk
- D. There's no risk predictable

**Answer: A**

Explanation:

The use of HTML tables for layout instead of proper semantic HTML and responsive design violates accessibility guidelines, particularly those defined in the Web Content Accessibility Guidelines (WCAG).

Such a design makes it difficult or impossible for users relying on screen readers, keyboard navigation, or other assistive technologies to interact effectively with the site. Therefore, this creates a significant accessibility risk, which is distinct from general usability or user experience risks. Accessibility ensures inclusion of users with physical or cognitive impairments, making option B the correct choice.

### NEW QUESTION # 12

A company distributes its products over a web shop where users can put items in their shopping cart. After they click on "checkout", the checkout process starts and users cannot go back anymore to correct possible mistakes. The only way is to hit the "back" button of the browser, which might lead to an expired session and therefore losing all items in the shopping cart.

Which of the following heuristics would best describe this usability issue?

- A. Aesthetic and minimalist design
- **B. User control and freedom**
- C. Visibility of system status
- D. Help and documentation

**Answer: B**

Explanation:

The described issue violates the usability heuristic "User control and freedom," as defined by Jakob Nielsen.

This principle emphasizes that users should have the ability to undo and redo actions and navigate freely without being trapped in irreversible sequences. In the scenario, users are forced into the checkout process without a clear way to return or correct mistakes, except through the unreliable and disruptive back button.

This design flaw undermines user autonomy and can result in lost progress or frustration.

### NEW QUESTION # 13

Usability reviews aim to identify potential usability problems based on certain criteria. Which of the following is a reasonable criterion for a usability review?

- A. Functional requirements
- B. Statutory Code of Practice
- **C. Usability standards**
- D. Opinion of the management

**Answer: C**

Explanation:

Usability reviews evaluate a system or interface against established usability principles or standards to identify potential issues before user testing. A recognized criterion for such reviews includes adherence to usability standards such as ISO 9241 or the Web Content Accessibility Guidelines (WCAG). These standards are derived from years of research and user-centered design principles. Options A and C do not directly relate to usability. Functional requirements (option B) refer to what the system should do, not how usable it is.

Hence, option D is correct as usability standards provide a consistent, objective basis for evaluating usability.

### NEW QUESTION # 14

Which of the following are advantages of using a usability lab?

- The context is natural
- Test sessions are easy to observe
- Inexpensive setup
- Similar conditions for all sessions
- Easy recording of sessions

- **A. ii, iv & v are true, i & iii are false**
- B. ii & iv are true, i, iii & v are false
- C. i, ii & v are true, iii & iv are false
- D. iii, iv & v are true, i & ii are false

**Answer: A**

Explanation:

Usability labs provide a controlled environment that offers several advantages for observing and recording usability test sessions.

Specifically, they allow for easy observation of participants (ii), standardized conditions for each session (iv), and facilitate audio and

video recording for detailed analysis (v). However, the context is not natural (i), because the lab is an artificial setting rather than the user's actual environment.

Also, setting up a professional usability lab is not inexpensive (iii); it typically involves significant costs for equipment, space, and staffing. Therefore, options ii, iv, and v are true, while i and iii are false.

## NEW QUESTION # 15

Which of the following statements about usability test plans is true?

- A. It contains a schedule
- B. It contains the results of the test sessions
- C. It should be very elaborate and at least 10 pages
- D. It should contain the briefing instructions

**Answer: A**

Explanation:

A usability test plan is a foundational document created before conducting usability testing. It outlines the objectives, scope, methodology, participants, tasks, and schedule for the testing activities. One of its essential components is the schedule, which details when and how test sessions will occur to ensure proper resource allocation and time management. Including a schedule helps coordinate between test moderators, participants, observers, and stakeholders, making the testing process organized and efficient. While briefing instructions (Option B) may be related to the usability test, they are typically documented separately or included in participant materials rather than the formal test plan itself. The test plan should be concise and focused; it need not be overly elaborate or lengthy (Option C), as clarity and usability of the plan are more important than length. The results of the test sessions (Option D) are not included in the test plan but rather compiled afterward in a test report or analysis document.

Therefore, the correct statement is that the usability test plan contains a schedule, ensuring a structured timeline for the usability testing activities.
