Adobe Experience Manager Architect Master certification exam evaluates the candidates' knowledge and proficiency in several areas, including solution design, deployment, and optimization. Adobe Experience Manager Architect Master certification exam is an excellent way for professionals to showcase their expertise in AEM and validate their skills among their peers and

employers.

Adobe Experience Manager Architect Master Sample Questions (Q86-Q91):

NEW QUESTION # 86

A customer with a large volume of assets and site pages needs to upgrade from AEM 6.4 with MongoMK installation to AEM 6.5 MongoMK. The architect recommends reindexing and the customer wants to keep downtime in the production environment minimal during the upgrade process.

Which two options would the architect choose? (Choose two.)

- A. Use oak-run jar with -doc-traversal command line parameter
- B. Run the offline indexing process on the MongoDB replica
- C. Use crx2oak jar with -doc-traversal command line parameter
- D. Run the online indexing process on the MongoDB replica

Answer: B,D

NEW QUESTION # 87

A client was successfully moved from AEM 6.5 to AEM as a Cloud Service (AEMaaS) environment. The Content Transfer Tool was used to transfer the content to the AEMaaS environment. The developed components render different renditions based on the breakpoint of the pages. The users reported that newly uploaded assets are not rendering or missing.

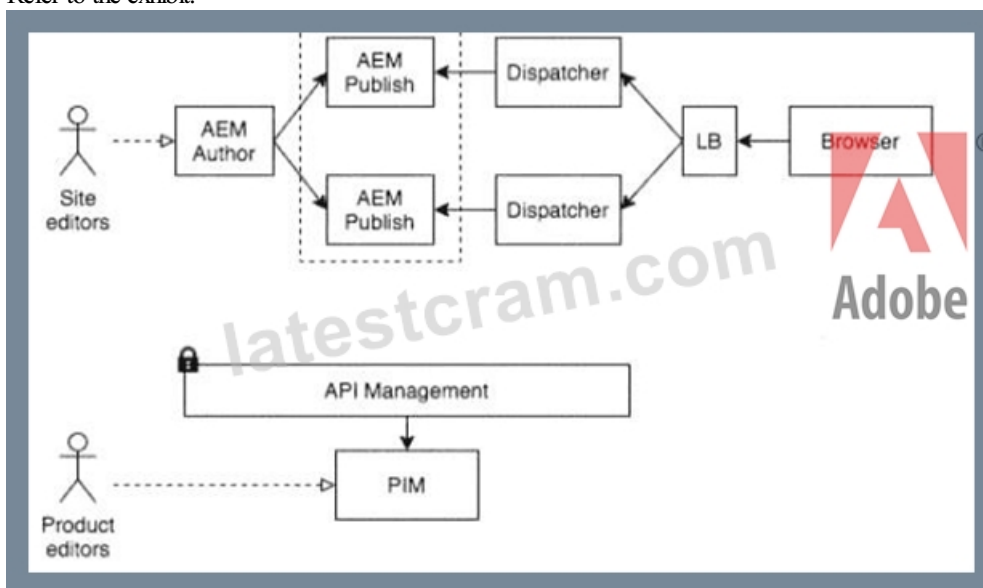

What is the cause of this issue and how can it be resolved?

- A. The Asset Update workflow was not migrated properly to the new AEMaaS instance. The solution is to make sure that the workflow is present in the codebase.
- B. The Asset Update workflow was not migrated properly to the new AEMaaS instance. The solution is to migrate the /var path and the workflow models using the Content Transfer Tool.
- C. The Asset Update workflow is not compatible with AEMaaS. The solution is to rewrite the workflow to use the new APIs in the AEM SDK.
- D. The Asset Update workflow is not compatible with AEMaaS. The solution is to use AEM Processing profiles to create the missing renditions.

Answer: D

NEW QUESTION # 88

Refer to the exhibit.

A customer with an existing AEM implementation wants to enrich product pages with technical data coming from their PIM system. The PIM system sits behind an API Management solution that publicly exposes the PIM API's as RESTful web services with basic authentication as the security mechanism. Data consistency with the PIM and secure access to the APIs are key elements of the integration.

How should the Architect set up the integration between AEM and the PIM?

- **A. Integrate the AEM Publishers directly with the API Management solution**
- B. Import the technical data into the AEM Author and replicate to Publishers
- C. Convert the technical data to Content Fragments and expose using Content Services
- D. Use a client-side integration with AJAX from the browser to the API Management

Answer: A

Explanation:

Integrate the AEM Publishers directly with the API Management solution . According to Adobe Experience Manager documentation¹, a direct integration between AEM and PIM can enable marketers and creative professionals to manage eCommerce-related product data and photography within AEM. A direct integration can also ensure data consistency with the PIM and secure access to the APIs using basic authentication²³.

Option A is the only diagram that shows how AEM Publishers can directly communicate with the API Management solution.

NEW QUESTION # 89

A large digital agency has 10 TB of assets in their DAM where renditions for each Asset must be created without affecting performance for the authors. Which capability should the Architect recommend to meet the requirements?

- **A. Create AEM multi-threaded workflow**
- B. Use AEM Asset Offloading
- C. Reduce the number of AEM Asset versions
- D. Update dispatcher configuration to cache Assets

Answer: A

NEW QUESTION # 90

A client's site does not show the latest page content for some site visitors. The client has two data centers with each configured with a Dispatcher connected to two Publish machines. The site load issue only occurs intermittently for visitors from one of the data centers.

Which step should the Architect take to resolve the issue?

- A. Check the Publish instance(s) attached to the Dispatcher associated to the impacted data center
- B. Review the log files on the Author instances to determine if there are any template errors
- **C. Check the SSL certificate on the impacted data center's load balance.**
- D. Disable caching on all impacted data centers Dispatchers to force the Publish machines to serve the page content

Answer: C
