

# Instant and Proven Way to Crack Salesforce Analytics-Arch-201 Exam

2026 Latest DumpsKing Analytics-Arch-201 PDF Dumps and Analytics-Arch-201 Exam Engine Free Share:  
<https://drive.google.com/open?id=1DKAJ7UJIJaAbCuWJZ7p4yJqMsP98EI0M>

One failure makes many candidates fall into despair, become unconfident or even someone want to give up testing for IT certification. Now Analytics-Arch-201 reliable practice exam online will help you out. It covers most real test questions and will assist you to clear exam certainly. You will be confident in your test. Analytics-Arch-201 reliable practice exam online will be an important choice for your Salesforce certification. Sometimes choice is greater than effort.

## Salesforce Analytics-Arch-201 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>• <b>Monitor and Maintain a Tableau Deployment:</b> This section evaluates skills of Tableau Administrators in monitoring, maintaining, and optimizing Tableau environments. It involves creating custom administrative dashboards, conducting load testing using tools like TabJolt, and analyzing test results. Troubleshooting complex performance bottlenecks in workbooks and server resources is key, as is tuning caching and scaling strategies. It covers leveraging observability tools such as the Resource Monitoring Tool, analyzing logs and metrics, and adjusting architecture accordingly. Automation of maintenance functions using APIs, scripting, and scheduling is included, along with managing server extensions, content automation, dashboard extensions, web data connectors, and secure embedded solutions.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>• <b>Design a Tableau Infrastructure:</b> This section of the exam measures skills of Tableau Consultants and focuses on planning and designing a complex Tableau deployment. It covers gathering user requirements, licensing strategies including Authorization-to-Run, high availability and disaster recovery planning, and mapping server add-ons to the organization's needs. It includes planning and implementing Tableau Cloud with Bridge, authentication, user provisioning, and multi-site configuration. Additionally, it addresses migration planning across Tableau products, operating systems, identity stores, and consolidations, as well as designing process topologies, sizing, node roles, and recommending server configurations including security, hardware, and disaster recovery.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>• <b>Deploy Tableau Server:</b> This domain assesses the ability of Tableau Administrators to perform production-ready deployments of Tableau Server. It encompasses installing and configuring Tableau Server with external components, supporting air-gapped environments, disaster recovery validations, and blue-green deployments. It includes configuring and troubleshooting various authentication methods such as SAML, Kerberos, and LDAP. The section also covers implementing encryption strategies, installing and verifying Tableau Server on Linux and Windows platforms, resolving installation and configuration issues, and managing service accounts and logging.</li> </ul>

## New Exam Analytics-Arch-201 Braindumps | 100% Free High Pass-Rate Salesforce Certified Tableau Architect New Exam Materials

In order to cater to different kinds of needs of candidates, we offer three versions for Analytics-Arch-201 training materials for you to select. Each version has its own advantage, and you can choose the most suitable one in accordance with your own needs. Analytics-Arch-201 PDF version is printable, and you can print it into paper if you like. Analytics-Arch-201 Soft test engine can stimulate the real exam environment, so that you can build up your confidence for the exam. Analytics-Arch-201 Online test engine is convenient and easy to learn, and it supports offline proactive. You can also have a review of what you have learned through Analytics-Arch-201 Online test engine.

### Salesforce Certified Tableau Architect Sample Questions (Q190-Q195):

#### NEW QUESTION # 190

A company is migrating its Tableau workbooks and data sources from one server to another. Which feature of the Tableau Content Migration Tool is most critical for this process?

- A. The option to manually migrate each workbook individually for better control
- B. The capability to only migrate the most recently accessed workbooks
- C. The ability to change the visual design of workbooks during the migration
- **D. The functionality to automatically update data source connections in the workbooks during migration**

**Answer: D**

Explanation:

The functionality to automatically update data source connections in the work-books during migration Automatically updating data source connections is essential to ensure that workbooks function correctly after migration, maintaining data integrity and continuity. Option A is incorrect because changing the visual design is not the primary function of a migration tool. Option C is incorrect as manual migration of each workbook is time-consuming and prone to errors. Option D is incorrect because it's important to migrate all necessary workbooks, not just the most recently accessed ones.

#### NEW QUESTION # 191

When optimizing caching for Tableau Server to improve dashboard performance, which setting is most effective to adjust?

- **A. Configuring the cache to be cleared at a regular, scheduled interval that aligns with the data refresh schedule**
- B. Increasing the server's RAM to enhance its overall caching capability
- C. Setting the cache to refresh every time a view is loaded to ensure the most up-to-date data is always used
- D. Disabling caching entirely to force real-time queries for all dashboard views

**Answer: A**

Explanation:

Configuring the cache to be cleared at a regular, scheduled interval that aligns with the data refresh schedule Configuring Tableau Server's cache to clear at regular intervals that align with the data refresh schedule can effectively balance performance with data freshness. This approach ensures that users receive relatively recent data while still benefiting from the performance improvements that caching provides. Option A is incorrect because refreshing the cache every time a view is loaded can negate the performance benefits of caching and may lead to unnecessary load on the server. Option C is incorrect as disabling caching entirely would prevent Tableau Server from leveraging cached data for faster performance. Option D is incorrect because while increasing RAM can enhance a server's capacity, it does not directly optimize caching strategies related to dashboard performance.

#### NEW QUESTION # 192

In a multi-node Tableau Server environment, you are experiencing intermittent database connectivity issues. What should be the first step in troubleshooting this problem?

- A. Changing the database server to a different platform that is known for more stable connectivity
- **B. Checking the network configuration and firewalls between the Tableau Server nodes and the database server for any connectivity barriers**
- C. Upgrading the database server's hardware to improve its ability to handle connections
- D. Increasing the number of worker nodes in the Tableau Server environment to enhance overall connectivity

**Answer: B**

Explanation:

Checking the network configuration and firewalls between the Tableau Server nodes and the database server for any connectivity barriers The first step in troubleshooting intermittent database connectivity issues in a multi-node Tableau Server environment is to check the network configuration and firewall settings. This involves ensuring that there are no barriers or misconfigurations in the network that could be blocking or interrupting the connectivity between the Tableau Server nodes and the database server. Option A is incorrect because simply increasing the number of worker nodes may not address the underlying network connectivity issues. Option C is incorrect as upgrading the database server's hardware does not directly resolve network connectivity problems. Option D is incorrect because changing the database platform is a drastic measure and should be considered only after ruling out network-related issues.

#### **NEW QUESTION # 193**

You are configuring Tableau Server on a Linux system and find that the server is not accessible from client machines. What should be your initial step to resolve this issue?

- A. Assigning a static IP address to each client machine
- B. Increasing the bandwidth allocation to the Linux server
- C. Changing the network mode on the Linux server from public to private
- **D. Checking the DNS settings and ensuring the Linux server is correctly resolving hostnames**

**Answer: D**

Explanation:

Checking the DNS settings and ensuring the Linux server is correctly resolving hostnames When Tableau Server on a Linux system is not accessible from client machines, the initial step should be to check the DNS settings. Ensuring that the Linux server can correctly resolve host-names is important for network accessibility. Incorrect DNS settings or issues with hostname resolution can prevent clients from accessing the server. Option A is incorrect because bandwidth allocation is typically not related to issues of server accessibility in a local network setting. Option C is incorrect as assigning static IP addresses to client machines does not address the accessibility of the server itself. Option D is incorrect because changing the network mode from public to private on the Linux server does not directly address accessibility or DNS resolution issues.

#### **NEW QUESTION # 194**

During the migration of a Tableau Server, a company decides to automate the process using scripts. What is the primary objective of these scripts?

- A. To manually document each step of the migration process for auditing purposes
- B. To create a visual representation of the migration process for stakeholder presentations
- C. To intermittently halt the migration process for manual checks
- **D. To automate the transfer of user permissions and data connections**

**Answer: D**

Explanation:

To automate the transfer of user permissions and data connections The primary objective of using scripts in Tableau Server migration is to automate complex and repetitive tasks such as the transfer of user permissions and data connections, ensuring consistency and efficiency. Option A is incorrect because scripting is used for automation, not manual documentation. Option C is incorrect as the purpose of scripts is functional automation, not creating visual presentations. Option D is incorrect because scripts are meant to streamline and continuous the migration process, not intermittently halt it.

#### **NEW QUESTION # 195**

.....

With our Analytics-Arch-201 test prep, you don't have to worry about the complexity and tediousness of the operation. Our Analytics-Arch-201 exam torrent is available in different versions. Whether you like to study on a computer or enjoy reading paper materials, our test prep can meet your needs. Our PDF version of the Analytics-Arch-201 quiz guide is available for customers to print. You can print it out, so you can practice it repeatedly conveniently. And our Analytics-Arch-201 Exam Torrent make it easy for you to take notes on it so that your free time can be well utilized and you can often consolidate your knowledge. Everything you

do will help you successfully pass the exam and get the card.
