LatestCram is engaged in studying valid exam simulation files with high passing rate many years. If you want to find valid Microsoft

SC-300 exam simulations, our products are helpful for you. Our Microsoft SC-300 Exam Simulations will assist you clear exams and apply for international companies or better jobs with better benefits in the near future.

Microsoft Identity and Access Administrator Sample Questions (Q104-Q109):

NEW QUESTION # 104

You have an on-premises server named Server1 that runs Windows Server.

You have a Microsoft Entra tenant that contains an app registration named App1. App1 has Microsoft Graph application permissions.

You need to configure the environment to support App1. The solution must meet the following requirements:

- * App1 must be accessible only from the corporate network.
- * The credentials for App1 must NOT be stored as plain text.
- * Non-interactive scheduled tasks on Server1 must be able to authenticate to App1.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

Explanation:

According to the Microsoft SC-300: Microsoft Identity and Access Administrator Study Guide and Microsoft Learn documentation ("Implement app registration and authentication with Microsoft Entra ID"), when configuring app registrations and securing non-interactive service applications (like scheduled tasks), two key elements must be addressed - secure authentication and conditional access enforcement.

To ensure App1 is accessible only from the corporate network, you must configure a Conditional Access policy in Microsoft Entra ID. Conditional Access policies allow you to restrict access to applications based on conditions such as:

- * User or workload identity
- * Location (e.g., trusted IP ranges or corporate networks)
- * Device compliance and sign-in risk

As Microsoft documentation states:

"Conditional Access policies can restrict access to specific applications based on location, risk, or device status. Use named locations to allow access only from your trusted network." Therefore, a Conditional Access policy is required to meet the first requirement.

For non-interactive scheduled tasks running on an on-premises server (Server1) that need to authenticate to App1 using application permissions, credentials must be securely stored. Storing plain-text secrets (like passwords or client secrets) violates security best practices.

Microsoft recommends using certificates for application authentication because certificates are securely stored and provide higher security than secrets.

From the SC-300 material and Microsoft Learn:

"When registering applications that use non-interactive authentication, use a certificate-based credential instead of a client secret. Certificates are more secure and meet compliance requirements for secure app authentication." This approach also ensures that Server1's scheduled tasks can authenticate silently using the private key of the certificate.

NEW QUESTION # 105

You have an Azure Active Directory (Azure AD) tenant that contains a user named User1. An administrator deletes User1. You need to identify the following:

- * How many days after the account of User1 is deleted can you restore the account?
- * Which is the least privileged role that can be used to restore User1?

What should you identify? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 106

You have an Azure Active Directory (Azure AD) tenant that contains a user named User1 and the groups shown in the following

table.

In the tenant, you create the groups shown in the following table.

Which members can you add to GroupA and GroupB? To answer, select the appropriate options in the answer area.

NOTE:Each correct selection is worth one point.

Answer:

NEW QUESTION # 107

You have an Azure Active Directory (Azure AD) tenant that contains three users named User1, User1, and User3, You create a group named Group1. You add User2 and User3 to Group1.

You configure a role in Azure AD Privileged identity Management (PIM) as shown in the application administrator exhibit. (Click the application Administrator tab.)

Group1 is configured as the approver for the application administrator role.

You configure User2to be eligible for the application administrator role.

For User1, you add an assignment to the Application administrator role as shown in the Assignment exhibit.

(Click Assignment tab)

For each of the following statement, select Yes if the statement is true, Otherwise, select No.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 108

You have a Microsoft 365 tenant that has 5,000 users. One hundred of the users are executives. The executives have a dedicated support team.

You need to ensure that the support team can reset passwords and manage multi-factor authentication (MFA) settings for only the executives. The solution must use the principle of least privilege.

Which object type and Azure Active Directory (Azure AD) role should you use? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 109

.....

Our passing rate of SC-300 learning quiz is 99% and our SC-300 practice guide boosts high hit rate. Our SC-300 test torrents are compiled by professionals and the answers and the questions we provide are based on the real exam. The content of our SC-300 exam questions is simple to be understood and mastered. To let you get well preparation for the exam, our software provides the function to stimulate the real exam and the timing function to help you adjust the speed. Based on those merits of our SC-300 Guide Torrent you can pass the SC-300 exam with high possibility.
