On the basis of the current social background and development prospect, the 350-701 certifications have gradually become accepted prerequisites to stand out the most in the workplace. As far as we know, in the advanced development of electronic technology, lifelong learning has become more accessible, which means everyone has opportunities to achieve their own value and life dream. Our 350-701 Exam Materials are pleased to serve you as such an exam tool. You will have a better future with our 350-701 study braindumps!

## Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q527-Q532):

### NEW QUESTION # 527

Which term describes when the Cisco Firepower downloads threat intelligence updates from Cisco Talos?

- A. analysis
- B. sharing
- **C. consumption**
- D. authoring

**Answer: C**

Explanation:

Explanation:

... we will showcase Cisco Threat Intelligence Director (CTID) an exciting feature on Cisco's Firepower Management Center (FMC) product offering that automates the operationalization of threat intelligence. TID has the ability to consume threat intelligence via STIX over TAXII and allows uploads/downloads of STIX and simple blacklists. Reference:

### NEW QUESTION # 528

Where are individual sites specified to be blacklisted in Cisco Umbrella?

- A. content categories
- B. security settings
- **C. destination lists**
- D. application settings

**Answer: C**

Explanation:

Explanation A destination list is a list of internet destinations that can be blocked or allowed based on the administrative preferences for the policies applied to the identities within your organization. A destination is an IP address (IPv4), URL, or fully qualified domain name. You can add a destination list to Umbrella at any time; however, a destination list does not come into use until it is added to a policy. Reference: <https://docs.umbrella.com/deployment-umbrella/docs/working-with-destination-lists> A destination list is a list of internet destinations that can be blocked or allowed based on the administrative preferences for the policies applied to the identities within your organization. A destination is an IP address (IPv4), URL, or fully qualified domain name. ### NEW QUESTION # 529

Drag and drop the cryptographic algorithms for IPsec from the left onto the cryptographic processes on the right.

**Answer:**

Explanation:

□

### NEW QUESTION # 530

What is a feature of Cisco NetFlow Secure Event Logging for Cisco ASAs?

- **A. Flow-create events are delayed**
- B. Multiple NetFlow collectors are supported
- C. Secure NetFlow connections are optimized for Cisco Prime Infrastructure
- D. Advanced NetFlow v9 templates and legacy v5 formatting are supported

**Answer: A**

Explanation:

The ASA and ASASM implementations of NetFlow Secure Event Logging (NSEL) provide the following major functions: ... - Delays the export of flow-create events. Reference:

<https://www.cisco.com/c/en/us/td/docs/security/asa/asa92/configuration/general/asa-general-cli/monitor-nsel.pdf>

...

- Delays the export of flow-create events.

### NEW QUESTION # 531

An organization wants to implement a cloud-delivered and SaaS-based solution to provide visibility and threat detection across the AWS network. The solution must be deployed without software agents and rely on AWS VPC flow logs instead. Which solution meets these requirements?

- A. Cisco Cloudlock
- B. Cisco Umbrella
- C. NetFlow collectors
- D. Cisco Stealthwatch Cloud

**Answer: D**

Explanation:

Cisco Stealthwatch Cloud is a cloud-delivered and SaaS-based solution that provides visibility and threat detection across the AWS network. It does not require any software agents to be installed on the AWS instances, and it relies on AWS VPC flow logs to collect network traffic metadata. Cisco Stealthwatch Cloud analyzes the flow logs using machine learning and behavioral modeling to detect anomalies and threats, such as data exfiltration, lateral movement, reconnaissance, and compromised instances. Cisco Stealthwatch Cloud also provides contextual information and actionable alerts to help users respond to incidents and remediate issues.

Cisco Umbrella is a cloud-delivered and SaaS-based solution that provides DNS-layer security and web filtering for internet traffic. It does not provide visibility and threat detection for internal AWS network traffic, and it requires software agents to be installed on the endpoints or network devices to enforce policies and redirect DNS requests.

NetFlow collectors are devices or software applications that collect and analyze NetFlow records, which are generated by network devices to capture information about IP traffic flows. NetFlow collectors can provide visibility and threat detection for network traffic, but they are not cloud-delivered or SaaS-based solutions.

They also require NetFlow exporters to be configured on the network devices, which may not be supported by AWS.

Cisco Cloudlock is a cloud-delivered and SaaS-based solution that provides cloud security posture management (CSPM) and cloud access security broker (CASB) capabilities for cloud applications and environments. It does not provide visibility and threat detection for AWS network traffic, and it does not rely on AWS VPC flow logs. It focuses on protecting cloud data, users, and configurations from misconfigurations, compliance violations, and malicious activities. References :=
