

# Comprehensive, up-to-date coverage of the entire PDII Platform Developer II curriculum

BONUS!!! Download part of BootcampPDF PDII dumps for free: [https://drive.google.com/open?id=1-Zs\\_ExYIvbTZEmf8tEm9msKPNmTjIVB](https://drive.google.com/open?id=1-Zs_ExYIvbTZEmf8tEm9msKPNmTjIVB)

Our PDII valid practice questions are designed by many experts in the field of qualification examination, from the user's point of view, combined with the actual situation of users, designed the most practical PDII learning materials. We believe that no one will spend all their time preparing for PDII Exam, whether you are studying professional knowledge, or all of which have to occupy your time to review the exam. Using the PDII test prep, you will find that you can grasp the knowledge what you need in the exam in a short time.

With the rapid development of computer, network, and semiconductor techniques, the market for people is becoming more and more hotly contested. Passing a PDII exam to get a certificate will help you to look for a better job and get a higher salary. If you are worried about your job, your wage, and a PDII Certification, if you are going to change this, we are going to help you solve your problem by our PDII exam torrent with high quality, now allow us to introduce you our PDII guide torrent.

## Salesforce PDII Exam Dumps-Shortcut To Success

BootcampPDF will provide you with actual Platform Developer II (PDII) exam questions in pdf to help you crack the PDII exam. So, it will be a great benefit for you. If you want to dedicate your free time to preparing for the Platform Developer II (PDII) exam, you can check with the soft copy of pdf questions on your smart devices and study when you get time. On the other hand, if you want a hard copy, you can print PDII exam questions.

Salesforce is a globally renowned cloud-based CRM (Customer Relationship Management) software. It is used by businesses of all sizes to streamline their sales, marketing, and customer service operations. The Salesforce platform is highly customizable, and businesses can build custom applications on it to cater to their specific needs. The Salesforce Certified Platform Developer II (PDII) certification exam is designed to test the skills and knowledge required to build custom applications on the Salesforce platform.

## Salesforce Platform Developer II Sample Questions (Q148-Q153):

### NEW QUESTION # 148

Which scenario requires a developer to use an Apex callout instead of Outbound Messaging?

- A. The target system uses a SCAP API.
- B. The callout needs to be asynchronous.
- C. The callout needs to be invoked from a flow.
- **D. The target system uses a REST API.**

**Answer: D**

Explanation:

Outbound Messaging in Salesforce provides a way to send notifications from Salesforce to external applications using SOAP-based web service calls. However, when the target system requires interactions with RESTful web services, a developer must use an Apex callout. This is because Outbound Messaging is limited to SOAP and cannot directly interact with REST APIs. Apex callouts provide the flexibility to make HTTP requests to REST endpoints, thus allowing developers to programmatically interact with virtually any web service provided by external systems.

Outbound Messaging

#### NEW QUESTION # 149

A developer is debugging an Apex-based order creation process that has a requirement to have three savepoints, SP1, SP2, and SP3 (created in order), before the final execution of the process.

During the final execution process, the developer has a routine to roll back to SP1 for a given condition. Once the condition is fixed, the code then calls 2 roll back to SP3 to continue with final execution. However, when the roll back to SP3 is called, a runtime error occurs.

Why does the developer receive a runtime error?

- A. The developer has too many DML statements between the savepoints.
- **B. SP3 became invalid when SP1 was rolled back.**
- C. The developer should have called SF2 before calling SP3.
- D. The developer used too many savepoints in one trigger session.

**Answer: B**

Explanation:

The developer receives a runtime error because SP3 became invalid when SP1 was rolled back. When a developer rolls back to a savepoint, all the savepoints created after that savepoint are also rolled back and become invalid. Therefore, the developer cannot roll back to SP3 after rolling back to SP1, as SP3 no longer exists. The developer should either create a new savepoint after fixing the condition or avoid rolling back to SP1 if they want to roll back to SP3 later. #### NEW QUESTION # 150

An org records customer order information in a custom object, `order__c`, that has fields for the shipping address. A developer is tasked with adding code to calculate shipping charges on an order, based on a flat percentage rate associated with the region of the shipping address.

What should the developer use to store the rates by region, so that when the changes are deployed to production no additional steps are needed for the calculation to work?

- A. Custom list setting
- B. Custom object
- **C. Custom metadata type**
- D. Custom hierarchy setting

**Answer: C**

#### NEW QUESTION # 151

A developer writes a lightning web component that displays a dropdown list of all custom objects in the org from which a user will select Apex method prepares and returns data to the component.

What should the developer do to determine which objects to include in the response?

- **A. Check the `isCustom()` value on the `sObject` describe result.**
- B. Import the list of all custom objects from `@salesforce/schema`.
- C. Use the `getCustomObject()` method from the `Schema` class.
- D. Check the `getObjectType()` value for `Custom` or `Standard` on the `sObject` describe result.

**Answer: A**
