

Valid 156-215.82 Test Online - 156-215.82 Quiz

One of the significant advantages of our 156-215.82 exam material is that you can spend less time to pass the exam. People are engaged in modern society. So our goal is to achieve the best learning effect in the shortest time. So our 156-215.82 test prep will not occupy too much time. You might think that it is impossible to memorize well all knowledge. We can tell you that our 156-215.82 Test Prep concentrate on systematic study, which means all your study is logic. Why not give us a chance to prove? Our 156-215.82 guide question dumps will never let you down.

You can also become part of this skilled and qualified community. To do this just enroll in the Check Point Certified Security Administrator - R82 Exam and start preparation with real and valid 156-215.82 practice test questions right now. The Check Point Certified Security Administrator - R82 practice test questions are checked and verified by experienced and qualified 156-215.82 Exam trainers. So you can trust ExamCost Check Point Certified Security Administrator - R82 practice test questions and start preparation with confidence.

156-215.82 Quiz, Valid Dumps 156-215.82 Sheet

ExamCost Check Point Certified Security Administrator - R82 (156-215.82) exam dumps save your study and preparation time. Our experts have added hundreds of Check Point Certified Security Administrator - R82 (156-215.82) questions similar to the real exam. You can prepare for the Check Point Certified Security Administrator - R82 (156-215.82) exam dumps during your job. You don't need to visit the market or any store because ExamCost CheckPoint 156-215.82 exam questions are easily accessible from the website.

CheckPoint Check Point Certified Security Administrator - R82 Sample Questions (Q84-Q89):

NEW QUESTION # 84

What are the three deployment considerations for a secure network?

- A. Bridge Mode, Remote, and Standalone
- B. Distributed, Bridge Mode, and Remote
- C. Standalone, Distributed, and Bridge Mode
- **D. Remote, Standalone, and Distributed**

Answer: D

Explanation:

The three deployment considerations for a secure network are Remote, Standalone, and Distributed. Remote deployment means that the Security Management Server and Security Gateway are installed on different machines. Standalone deployment means that the Security Management Server and Security Gateway are installed on the same machine. Distributed deployment means that there are multiple Security Gateways managed by one or more Security Management Servers. Therefore, the correct answer is

C.Remote, Standalone, and Distributed.

NEW QUESTION # 85

Please choose correct command syntax to add an "emailserver1" host with IP address 10.50.23.90 using GAIa management CLI?

- A. **mgmt add host name emailserver1 ip-address 10.50.23.90**
- B. hostname myHost12 ip-address 10.50.23.90
- C. add host name emailserver1 ip-address 10.50.23.90
- D. mgmt add host name ip-address 10.50.23.90

Answer: A

Explanation:

The correct syntax for adding a host using GAIa management CLI is `mgmt add host name <name> ip-address <ip-address>2`.

NEW QUESTION # 86

To increase security, the administrator has modified the Core protection 'Host Port Scan' from 'Medium' to 'High' Predefined Sensitivity. Which Policy should the administrator install after Publishing the changes?

- A. The Access Control & HTTPS Inspection Policy.
- B. The Access Control Policy.
- C. The Access Control and Threat Prevention Policies.
- D. **The Threat Prevention Policy.**

Answer: D

Explanation:

To increase security, the administrator has modified the Core protection 'Host Port Scan' from 'Medium' to 'High' Predefined Sensitivity. The administrator should install the Threat Prevention Policy after Publishing the changes³. The Threat Prevention Policy defines how the Security Gateway inspects and protects against threats such as port scans, bot attacks, and zero-day exploits⁴.

NEW QUESTION # 87

Check Point ClusterXL Active/Active deployment is used when:

- A. **There is Load Sharing solution set up**
- B. Only when there is Unicast solution set up
- C. Only when there is Multicast solution set up
- D. There is High Availability solution set up

Answer: A

Explanation:

Check Point ClusterXL Active/Active deployment is used when there is Load Sharing solution set up. Load Sharing enables multiple Security Gateways to share traffic and provide high availability¹². Check Point R81, Check Point R81 ClusterXL Administration Guide

NEW QUESTION # 88

In which scenario will an administrator need to manually define Proxy ARP?

- A. When they configure a "Manual Hide NAT" which translates to an IP address that belongs to one of the firewall's interfaces.
- B. When they configure an "Automatic Hide NAT" which translates to an IP address that does not belong to one of the firewall's interfaces.
- C. **When they configure a "Manual Static NAT" which translates to an IP address that does not belong to one of the firewall's**

interfaces.

- D. When they configure an "Automatic Static NAT" which translates to an IP address that does not belong to one of the firewall's interfaces.

Answer: C

Explanation:

NAT (Network Address Translation) is a technique that modifies the IP addresses or ports of packets that pass through a security gateway. NAT can be configured in two ways: Automatic or Manual. Automatic NAT means that the NAT rules are generated automatically by the security gateway based on the NAT properties of network objects. Manual NAT means that the NAT rules are defined explicitly by the administrator in the NAT policy. Proxy ARP (Address Resolution Protocol) is a technique that allows a security gateway to answer ARP requests on behalf of other hosts. Proxy ARP is needed when a host on one network segment tries to communicate with a host on another network segment that has a different IP address than its own. In some scenarios, an administrator will need to manually define Proxy ARP for NAT to work properly. One such scenario is when they configure a Manual Static NAT which translates to an IP address that does not belong to one of the firewall's interfaces. Check Point R81 Network Address Translation Administration Guide
