Thousands of people will crowd into our website to choose the 2V0-17.25 study materials. So people are different from the past. Learning has become popular among different age groups. Our 2V0-17.25 guide questions truly offer you the most useful knowledge. You can totally trust us. We are trying our best to meet your demands. Why not give our 2V0-17.25 Practice Engine a chance? Our products will live up to your expectations.

VMware 2V0-17.25 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none">• Deploy, Configure, and Operate VMware Cloud Foundation (VCF): This section of the exam measures the skills of VCF Administrators and goes in-depth into deploying, configuring, and managing VMware Cloud Foundation. The deployment portion covers identifying deployment models, configuring private cloud environments, and setting up workload domains and networking. The management objectives focus on lifecycle operations such as fleet management, identity and role-based access, licensing, certificate handling, and importing existing vCenters. Operations are assessed through capabilities like monitoring health, logs, networks, and storage, along with creating dashboards, configuring alerts, and ensuring compliance. The automation portion evaluates skills in using VCF Automation for multi-tenancy, provider networking, content libraries, governance policies, and extensibility to automate business processes. It also includes knowledge of deploying Supervisor-based services within Cloud Foundation. |
| Topic 2 | <ul style="list-style-type: none">• Plan and Design the VMware by Broadcom Solution: This section of the exam measures the skills of Solution Designers and emphasizes the ability to plan and design VMware by Broadcom solutions. Although no testable objectives are defined here, it reinforces the importance of architectural planning and design considerations for large-scale cloud deployments. |

|---------|---|
| Topic 3 | <ul style="list-style-type: none"> IT Architectures, Technologies, Standards: This section of the exam measures the skills of Cloud Architects and focuses on understanding the broader context of IT architectures, common technologies, and industry standards. While it does not have testable objectives, it sets the foundation for how VMware Cloud Foundation aligns with enterprise cloud strategies. |
| Topic 4 | <ul style="list-style-type: none"> VMware Cloud Foundation Fundamentals: This section of the exam measures the skills of Private Cloud Engineers and covers the basic building blocks of VMware Cloud Foundation. It includes the vision and use cases for private cloud, along with the value it provides to businesses. Candidates are expected to understand compute fundamentals such as deploying and managing vCenter, ESXi, clusters, and virtual machines. Storage fundamentals include configuring vSphere storage, setting up vSAN clusters, applying storage policies, and understanding resilience options. Networking fundamentals are also assessed, with a focus on configuring connectivity, fabrics, routing, and network services in a VMware environment. |

VMware Cloud Foundation 9.0 Administrator Sample Questions (Q95-Q100):

NEW QUESTION # 95

An organization is looking to streamline its IT service delivery by automating the deployment of applications and infrastructure across its hybrid cloud environment.

Which VMware Aria Suite component should they use?

- A. Aria Operations for Networks
- B. Aria Operations for Logs
- C. Aria Operations
- D. Aria Automation

Answer: D

Explanation:

Aria Automation (formerly vRealize Automation) is designed to automate the deployment of applications and infrastructure across hybrid cloud environments. It enables the provisioning, management, and orchestration of IT services, helping organizations streamline their service delivery.

NEW QUESTION # 96

Which VMware license edition typically provides the most comprehensive set of features, including DRS, HA, and vMotion?

- A. Enterprise Plus
- B. Essentials
- C. Standard
- D. Foundation

Answer: A

Explanation:

Enterprise Plus is the top-tier edition that generally includes advanced features such as Distributed Resource Scheduler (DRS), High Availability (HA), and vMotion, among others.

NEW QUESTION # 97

An organization needs to perform maintenance on a specific host in a vSAN cluster. An administrator is required to put the host into maintenance mode whilst ensuring that all VMs in the cluster remain accessible.

Which three steps should the administrator take to correctly set a vSAN host into maintenance mode?

(Choose three.)

- A. Migrate all VMs manually from the host before enabling maintenance mode.
- B. Select the "No Data Migration" option to speed up the process.
- C. Right-click the host and select "Enter Maintenance Mode."
- D. Choose the "Ensure Accessibility" option to maintain data accessibility.
- E. Navigate to the vSAN cluster in the vSphere Client and select the host.

Answer: C,D,E

Explanation:

The "Ensure Accessibility" option ensures that all data remains accessible during maintenance while minimizing the impact on performance and data migration.

The administrator must navigate to the vSAN cluster in the vSphere Client to select the host for maintenance mode.

Right-clicking the host and selecting "Enter Maintenance Mode" is the standard action for placing a host into maintenance mode.

NEW QUESTION # 98

An administrator is responsible for managing a VMware Cloud Foundation (VCF) Automation organization within a VCF instance.

The administrator has been tasked with updating an VMware NSX VPC by editing the NSX Connectivity profile for an NSX Project. The current profile was generated automatically when the NSX VPC was created.

What is the impact of the administrator making this change to the NSX VPC?

- A. All NSX VPCs associated with the VCF Automation organization will be updated with the new VPC connectivity profile.
- B. All NSX VPCs that use the default VPC connectivity profile will be updated with the new VPC connectivity profile.
- C. Only the selected NSX VPC will be updated with the new VPC connectivity profile.
- D. Only the NSX VPCs within the corresponding NSX Project will be updated with the new VPC connectivity profile.

Answer: C

Explanation:

In VMware Cloud Foundation (VCF) 9.0, the governance of Virtual Private Clouds (VPCs) allows for granular control over networking parameters. When a VPC is created in VCF 9.0, a VPC Connectivity Profile is automatically generated specifically for that instance if a pre-existing shared profile is not selected.

According to the VCF 9.0 Administration Guide (Networking Section):

* VPC Isolation: Each NSX VPC serves as a distinct, isolated administrative and data plane boundary.

While multiple VPCs can reside within a single NSX Project, their configurations—including the connectivity profiles—can be managed independently.

* Profile Modification Impact: When an administrator edits the NSX Connectivity profile for a specific NSX Project and VPC, the system treats this as a targeted configuration update. Because the profile in this scenario was "generated automatically when the NSX VPC was created," it is uniquely associated with that specific VPC's lifecycle.

* Scoped Changes: Modifying this specific profile does not trigger a global update across the entire VCF Automation organization, nor does it affect other VPCs within the project that may be using their own automatically generated or distinct profiles. This ensures that changes to one tenant's or application's networking environment do not cause unintended disruptions to others.

NEW QUESTION # 99

Which option allows administrators to quickly revert to a consistent VM state prior to a major software installation or patching within the guest OS?

- A. VM Snapshots
- B. VM Encryption
