Latest SPLK-1002 Dumps - Most SPLK-1002 Reliable Questions

Our approach to Splunk SPLK-1002 Exam Preparation is focused on quality over quantity, which means our Splunk SPLK-1002 practice tests help you identify the most important concepts and skills you need to master to pass the exam. We also provide ongoing 24/7 support to help you stay on track while using our product.

The Splunk Core Certified Power User Exam certification exam is designed to validate an individual's skills in using Splunk Core. Splunk Core Certified Power User Exam certification exam is recognized by employers worldwide and can help professionals in their careers by demonstrating their competence in using Splunk. Splunk Core Certified Power User Exam certification also provides credibility to an individual's skills and helps them gain recognition as an expert in using Splunk.

Splunk is a popular software platform that provides real-time visibility into machine data generated by various applications, servers, and devices. It helps organizations to monitor, analyze, and visualize their data to gain insights and make informed decisions. Splunk Core Certified Power User (SPLK-1002) is an industry-recognized certification that validates a candidate's knowledge and skills in using Splunk to perform advanced searches, create dashboards and reports, and manage Splunk deployments.

Splunk Core Certified Power User Exam Sample Questions (Q115-Q120):

NEW QUESTION # 115
Which syntax will find events where the values for the 1 field match the values for the Renewal-MonthYear field?

- A. | where '10yearAnnerversary=Renewal-MonthYear
- B. | where 10yearAnnerversary=Renewal-MonthYear
- C. | where 10yearAnnerversary='Renewal-MonthYear'
- D. | where '10yearAnnerversary'='Renewal-MonthYear'

Answer: B

Explanation:
The correct answer is A. | where 10yearAnnerversary=Renewal-MonthYear.
The where command is used to filter the search results based on an expression that evaluates to true or false. The where command can compare two fields, two values, or a field and a value.The where command can also use functions, operators, and wildcards to create complex expressions1.
The syntax for the where command is:
| where <expression>
The expression can be a comparison, a calculation, a logical operation, or a combination of these. The expression must evaluate to true or false for each event.
To compare two fields with the where command, you need to use the field names without any quotation marks. For example, if you want to find events where the values for the 10yearAnnerversary field match the values for the Renewal-MonthYear field, you can use the following syntax:
| where 10yearAnnerversary=Renewal-MonthYear
This will return only the events where the two fields have the same value.
The other options are not correct because they use quotation marks around the field names, which will cause the where command to interpret them as string values instead of field names. For example, if you use:
| where '10yearAnnerversary'='Renewal-MonthYear'
This will return no events because there are no events where the string value '10yearAnnerversary' is equal to the string value 'Renewal-MonthYear'.

where command usage

NEW QUESTION # 116
Which of the following statements describe GET workflow actions?

- A. Label names for GET workflow actions must include a field name surrounded by dollar signs.
- B. GET workflow actions must be configured with POST arguments.
- C. Configuration of GET workflow actions includes choosing a sourcetype.
- D. GET workflow actions can be configured to open the URT link in the current window or in a new window

Answer: D

Explanation:
GET workflow actions are custom actions that open a URL link when you click on a field value in your search results. GET workflow actions can be configured with various options, such as label name, base URL, URI parameters, app context, etc. One of the options is to choose whether to open the URL link in the current window or in a new window. GET workflow actions do not have to be configured with POST arguments, as they use GET method to send requests to web servers. Configuration of GET workflow actions does not include choosing a sourcetype, as they do not generate any data in Splunk. Label names for GET workflow actions must include a field name surrounded by dollar signs, as this indicates the field value that will be used to replace the variable in the URL link.

NEW QUESTION # 117
Which of the following searches would create a graph similar to the one below?

- A. None of these searches would generate a similart graph.
- B. index_internal seourcetype=Savesplunker | fields sourcetype, status | transaction status maxspan-id | timechart count by status
- C. index_internal seourcetype=Savesplunker | fields sourcetype, status | transaction status maxspan-id | chart count states by -time
- D. index_internal seourcetype=Savesplunker | fields sourcetype, status | transaction status maxspan-id | start count states

Answer: D

NEW QUESTION # 118
What do events in a transaction have In common?

- A. All events In a transaction must have the same timestamp.
- B. All events in a transaction must have the same sourcetype.
- C. All events in a transaction must have the exact same set of fields.
- D. All events in a transaction must be related by one or more fields.

Answer: D

Explanation:
Reference:
A transaction is a group of events that share some common characteristics, such as fields, time, or both. A transaction can be created by using the transaction command or by defining an event type with transactiontype=true in props.conf. Events in a transaction have one or more fields in common that relate them to each other. For example, you can create a transaction based on JSESSIONID, which is a unique identifier for each user session in web logs. Events in a transaction do not have to have the same timestamp, sourcetype, or exact same set of fields. They only have to share one or more fields that define the transaction.

NEW QUESTION # 119
The timechart command is an example of which of the following command types?

- A. Statistical
- B. Transforming
- C. Generating
- D. Orchestrating

Answer: B

Explanation:
Explanation
The correct answer is B. Transforming.
The explanation is as follows:
The timechart command is a Splunk command that creates a time series chart with corresponding table of statistics12.
A timechart is a statistical aggregation applied to a field to produce a chart, with time used as the X-axis1. You can specify a split-by field, where each distinct value of the split-by field becomes a series in the chart1.
Transforming commands are commands that change the format of the search results into a data structure that can be easily

visualized3. Transforming commands often use stats functions to aggregate and summarize data3.
Therefore, the timechart command is an example of a transforming command, as it transforms the search results into a chart and a table using stats functions123.
