220-1101 無料問題、220-1101 試験問題

CompTIAさまざまな顧客がさまざまなニーズを持っていることを考慮して、3つのバージョンの220-1101テストトレントを提供しています。PDFバージョン、PCテストエンジン、およびオンラインテストエンジンバージョンです。ウェブ上のCompTIA A+ Certification Exam Core 1試験問題の最も有利なデモの1つは、Q&Aの形式でPDFバージョンで書かれており、無料でダウンロードできます。この種類の220-1101試験準備は印刷可能で、ダウンロードにすぐにアクセスできます。つまり、いつでもどこでも勉強できるので、移植性があります。そ

して、220-1101トレーニングガイドのJpexam無料デモを試してみると、すばらしい品質がわかります。

CompTIA A+ Certification Exam: Core 1 認定 220-1101 試験問題 (Q854-Q859):

質問 # 854

A technician is implementing a RAID array for the financial department. The solution should allow fast access to data and maximum redundancy. Which of the following RAID configurations best meets these requirements?

- A. 0
- B. 1
- C. 2
- D. 3

正解: A

解説:

RAID 10 (also known as RAID 1+0) combines the features of RAID 1 (mirroring) and RAID 0 (striping) to provide both redundancy and performance enhancements. This configuration requires a minimum of four drives and offers fast data access through striping while ensuring data redundancy through mirroring. RAID 10 is ideal for environments where both data integrity and performance are critical, such as financial databases.

質問 # 855

A user in a medical office contacts a technician regarding a printer that is used to print A4-sized labels. After the labels are printed, they mistakenly contain white space in the middle of the page. Which of the following would MOST likely be the cause?

- A. A misfeed
- B. Worn rollers
- C. Contaminated fuser
- D. Page orientation

正解: D

解説:

Explanation

The most likely cause of the issue is that the page orientation is incorrect. The printer may be set to print labels in a different orientation than the orientation of the label sheet

質問 # 856

Which of the following describes the difference between a DNS server and a DHCP server?

- A. DNS is used for routing, while DHCP is used for name resolution.
- B. DNS only assigns private IP addresses, while DHCP only assigns public IP addresses.
- C. DNS is used to route traffic between networks, while DHCP is used to allocate subnets.
- D. DNS is used for address translation, while DHCP is used for IP address assignment.

正解: D

解説:

DNS stands for Domain Name System, and it is a network service that translates human-readable names (such as www.google.com) into numerical IP addresses (such as 172.217.14.206) that identify the location of the web servers on the internet. DNS also allows reverse lookup, which means finding the domain name associated with a given IP address. DNS servers are responsible for maintaining a database of domain names and their corresponding IP addresses, and responding to queries from clients who want to resolve a name to an address or vice versa¹².

DHCP stands for Dynamic Host Configuration Protocol, and it is a network service that automatically assigns IP addresses and other network configuration parameters (such as subnet mask, default gateway, DNS server, etc.) to devices that join a network. DHCP servers are responsible for managing a pool of IP addresses and leasing them to clients for a specified duration. DHCP servers also renew or release the IP addresses when the lease expires or the client disconnects from the network³⁴.

The difference between DNS and DHCP is that DNS is used for address translation, which means converting domain names to IP

addresses and vice versa, while DHCP is used for IP address assignment, which means providing IP addresses and other network settings to devices that need to communicate on a network.

質問 # 857

A customer wants to archive a large number of photos and does not plan to retrieve them often. The customer wants a storage option that is the least expensive per gigabyte. Which of the following should the technician suggest?

- A. SCSI RAID
- **B. 5,400rpm HDD**
- C. 15,000rpm SAS
- D. NVMe SSD

正解: B

解説:

Explanation

The correct answer is D. 5,400rpm HDD.

A 5,400rpm HDD (Hard Disk Drive) is a type of storage device that uses spinning magnetic disks to store data. A 5,400rpm HDD is the least expensive per gigabyte among the options given, as it has a lower rotational speed and performance than other types of HDDs or SSDs (Solid State Drives). A 5,400rpm HDD is suitable for archiving a large number of photos that are not accessed frequently, as it can offer high capacity and reliability at a low cost.

the average cost per gigabyte of a 5,400rpm HDD is around \$0.02 to \$0.0312, while the average cost per gigabyte of the other options are:

NVMe SSD: \$0.10 to \$0.1534

SCSI RAID: \$0.20 to \$0.305

15,000rpm SAS: \$0.30 to \$0.40

Therefore, a 5,400rpm HDD is the cheapest option among the four.

質問 # 858

A field technician is responding to a ticket about an animated sign with double images. One image is stationary, and the other image is live. Which of the following is the cause of the issue?

- A. Bad display cable
- B. Incorrect color settings
- **C. Display burn-in**
- D. Burned out bulbs

正解: C

解説:

Display burn-in occurs when a static image is left on a screen for a long time, causing the pixels to wear out unevenly and retain a ghost image even when new content is displayed. This issue can result in double images, where the "burned-in" stationary image persists alongside new, live content. This problem is more common in older displays or those used for static signage. Replacing the display cable or adjusting color settings would not address the underlying cause of uneven pixel wear, and burned-out bulbs would likely result in a loss of image clarity or brightness, not double images.
