## ISQI CTFL-AT證照資訊 & CTFL-AT新版題庫上線

Testpdf的ISQI專家團隊利用自己的知識和經驗專門研究了最新的短期有效的培訓方式，這個培訓方法對你們是很有幫助的，可以讓你們短期內達到預期的效果，特別是那些邊工作邊學習的考生，可以省時有不費力。選擇Testpdf的培訓資料你將得到你最想要的CTFL-AT培訓資料。

## 最新的 Agile Tester CTFL-AT 免費考試真題 (Q43-Q48):

### 問題 #43

Which of the following is a risk that continuous integration introduces?

- A. Teams sometimes over-rely on unit tests and exclude some important system and acceptance tests.
- B. Teams no longer have the ability to run manual tests, as all tests must be automated.
- **C. Developer's workload is increased, which can result in a reduction of output.**
- D. Testers sometimes have too many builds to test, which reduces the quality of testing.

答案: C

### 問題 #44

Which one of the following is a testable acceptance criterion?

- A. The system shall be easy to use.
- B. The solution shall support business processes.
- **C. The response time to confirm a customer submission must not exceed 5 seconds.**
- D. The tools for testing are tested before use and are meeting the requirements.

答案: C

解題說明:

A testable acceptance criterion is a condition that can be verified or measured objectively by the tester, customer, or stakeholder. It should be specific, measurable, achievable, relevant, and time-bound (SMART). A testable acceptance criterion should also be written from the user's perspective, achievable within the sprint, and written before development begins<sup>1</sup>.

Among the four options, only option C meets these criteria. It is specific (the response time to confirm a customer submission), measurable (must not exceed 5 seconds), achievable (within the technical and business constraints), relevant (to the user's needs and expectations), and time-bound (must be met in every sprint). It is also written from the user's perspective, testable (by measuring the response time), and written before development (as part of the user story definition).

Option A is not testable because it is vague and subjective. What does it mean to support business processes?

How can this be verified or measured? Option B is also not testable because it is subjective and ambiguous.

What does it mean to be easy to use? How can this be verified or measured? Option D is not testable because it is not written from the user's perspective. It is an internal quality criterion for the testing team, not an acceptance criterion for the product or feature.

### 問題 #45

Which of the following is NOT a typical task performed by the tester within an Agile team?

- A. Ensuring the appropriate testing tasks are scheduled during iteration planning.
- **B. Ensuring all project status meetings are held according to the plan.**
- C. Working with business stakeholders to clarify requirements.
- D. Suggesting improvements in team retrospectives.

答案: B

解題說明:

Explanation

The tester within an Agile team is not responsible for ensuring all project status meetings are held according to the plan. This is typically a task for the Scrum Master, who facilitates the meetings and ensures that the team follows the Agile principles and practices. The tester within an Agile team is responsible for ensuring the appropriate testing tasks are scheduled during iteration planning, suggesting improvements in team retrospectives, and working with business stakeholders to clarify requirements. These are all tasks that contribute to the quality of the software and the testing process, as well as the collaboration and communication within the team and with the customers. References: ISTQB Foundation Level Agile Tester Syllabus, Section 2.3.1, page 171; ISTQB Foundation Level Agile Tester Sample Exam Questions, Question 2.3.1-1, page 82

#### 問題 #46

Which of the following is NOT a statement of value from the Agile Manifesto?

- A. Working software over comprehensive documentation
- B. Responding to change over following a plan.
- C. Customer collaboration over contract negotiation.
- D. Processes and tools over individuals and interactions.

答案： D

解題說明：

Explanation

The Agile Manifesto is a declaration of four values and twelve principles that guide the Agile software development approach<sup>1</sup>2. The four values of the Agile Manifesto are<sup>1</sup>2:

Individuals and interactions over processes and tools

Working software over comprehensive documentation

Customer collaboration over contract negotiation

Responding to change over following a plan

These values emphasize the importance of human collaboration, working product, customer feedback, and adaptability over rigid processes, extensive documentation, fixed contracts, and predefined plans. The values do not imply that the items on the right are not important, but rather that the items on the left are more important and should be prioritized.

Therefore, the statement that is NOT a value from the Agile Manifesto is B, as it contradicts the first value of the Agile Manifesto.

The correct statement should be "Individuals and interactions over processes and tools". References: ISTQB Foundation Level Agile Tester Extension Syllabus<sup>1</sup>, page 10; ISTQB Agile Tester Sample Exam<sup>2</sup>, question 1.

#### 問題 #47

Which ONE of the following is an example of a typical "Business-oriented work product"?

- A. A user manual.
- B. Acceptance testing entry criteria.
- C. Usability testing test results.
- D. The released product.

答案： A

解題說明：

Business-oriented work products are those that describe what is needed (e.g., requirements specifications) and how to use it (e.g., user documentation). A user manual is an example of a business-oriented work product, as it provides instructions and guidance on how to use the product from the user's perspective. A user manual may also contain information about the product's features, benefits, and limitations. A user manual is typically written by technical writers, who may collaborate with developers, testers, and business analysts to ensure the accuracy and clarity of the content. A user manual may be delivered in various formats, such as printed, online, or interactive.
