Another challenge is staying on top of the ever-changing exam content. Juniper JN0-460 is constantly evolving, and it can be difficult to know what to expect on test day. Our Juniper JN0-460 practice tests and PDF are updated regularly to reflect the latest Juniper JN0-460 Exam Format and content, so you can be confident that you are studying the most up-to-date JN0-460 exam information.

During nearly ten years, our company has kept on improving ourselves, and now we have become the leader in this field. And now our JN0-460 training materials have become the most popular JN0-460 practice materials in the international market. There are so many advantages of our JN0-460 Study Materials, and as long as you free download the demos on our website, then you will know that how good quality our JN0-460 exam questions are in! You won't regret for your wise choice if you buy our JN0-460 learning guide!

JN0-460 New Dumps Ppt, Reliable JN0-460 Test Practice

If you are finding a study material to prepare your exam, our material will end your search. Our JN0-460 exam torrent has a high quality that you can't expect. I think our JN0-460 prep torrent will help you save much time, and you will have more free time to do what you like to do. I can guarantee that you will have no regrets about using our JN0-460 Test Braindumps. When the time for action arrives, stop thinking and go in, try our JN0-460 exam torrent, you will find our products will be a very good choice for you to pass your JN0-460 exam and get your certificate in a short time.

Juniper Mist AI Wired, Specialist (JNCIS-MistAI-Wired) Sample Questions (Q25-Q30):

NEW QUESTION # 25

Which two Marvis Wired Assurance actions require a Juniper switch?(Choose two.)

- A. bad cable
- B. EAP/802.1X failure
- C. negotiation mismatch
- D. missing VLAN

Answer: A,C

Explanation:

Marvis, the AI-driven virtual network assistant in Mist, provides real-time troubleshooting insights for both wired and wireless devices.

When used with Wired Assurance, certain actions require Juniper EX or QFX switches for telemetry collection.

Two of these wired-specific actions are:

Bad Cable Detection- triggered when electrical faults or poor cable quality are observed through LLDP or physical diagnostics.

NEW QUESTION # 26

Which campus fabric architecture extends from the core tier to the access tier?

- A. campus fabric IP Clos
- B. EVPN multihoming
- C. campus fabric core-distribution - edge-routed bridging (ERB)
- D. campus fabric core-distribution - centrally-routed bridging (CRB)

Answer: A

Explanation:

According to Juniper Mist documentation regarding campus fabric design, the campus fabric IP Clos (also known as a 5-stage Clos) is the architecture that extends the EVPN-VXLAN protocol stack from the core tier down through the distribution tier and finally to the access tier. In this model, every switch in the hierarchy- from the high-capacity core switches to the wiring closet access switches-participates in the EVPN control plane and VXLAN data plane.

By extending EVPN-VXLAN to the access tier, the IP Clos architecture provides a standards-based, scalable framework that allows for seamless Layer 2 connectivity over a Layer 3 underlay across the entire campus333333333. This enables advanced features like Microsegmentation using Group-Based Policies (GBP) and Macrosegmentation via Virtual Routing and Forwarding (VRF) instances directly at the edge of the network.

In contrast, other architectures like "core-distribution" (either CRB or ERB) typically limit the EVPN- VXLAN fabric to the core and distribution layers, leaving the access tier to connect via traditional methods like LAG, Virtual Chassis, or standard Layer 2 trunks5555. The IP Clos architecture is specifically designed for large-scale deployments where high density, vendor interoperability, and end-to-end policy enforcement are critical6. By utilizing a 5-stage IP Clos, organizations can eliminate the complexities of Spanning Tree Protocol (STP) while maintaining a flexible, "any-to-any" communication path throughout the physical infrastructure.

NEW QUESTION # 27

The use of templates in Wired Assurance provisioning facilitates:

- A. Increased manual configuration errors
- B. Standardization and scalability of network configurations
- C. Decreased network performance
- D. Reduced network visibility

Answer: B

NEW QUESTION # 28

A system administrator wants to onboard switches to a greenfield site. In this scenario, which three actions will accomplish this task? (Choose three.)

- A. Use the Juniper Networks system MAC address number.
- B. Use the Juniper Networks switch QR claim code.
- C. Use the API to automate autoprovisioning of the switches to Juniper Mist.
- D. Use the Juniper Networks switch serial number.
- E. Use bulk claiming switches from a Juniper Mist sale order.

Answer: B,C,E

Explanation:

For greenfield onboarding, switches are newly deployed and must be claimed into Mist Cloud. Juniper Mist offers multiple claim options to simplify large-scale onboarding.

"You can claim switches using the device's QR claim code, by bulk importing from a sales order, or through API-based automation for large deployments. Each of these methods securely associates the devices to your organization in Mist Cloud." Option

A: Incorrect - serial number alone is not sufficient for claiming.

Option B: Correct - claim codes (QR) uniquely identify switches.

Option C: Correct - bulk claim from a sales order streamlines large deployments.

Option D: Correct - APIs support automated claiming and provisioning workflows.

Option E: Incorrect - MAC address alone cannot be used to claim devices.

NEW QUESTION # 29

Which three parameters should be provided through DHCP when using ZTP during a Mist AI greenfield deployment? (Choose three.)

- A. NTP server
- B. NETCONF
- C. IP address
- D. name server

Answer: A,C,D

NEW QUESTION # 30
