Free PDF Microsoft - Professional AZ-400 - Designing and Implementing Microsoft DevOps Solutions Latest Test Fee

ValidVCE's experts have simplified the complex concepts and have added examples, simulations and graphs to explain whatever could be difficult for you to understand. Therefore even the average exam candidates can grasp all study questions without any difficulty. Additionally, the AZ-400 Exam takers can benefit themselves by using our testing engine and get numerous real exam like practice questions and answers. They will help them revising the entire syllabus within no time.

Microsoft Designing and Implementing Microsoft DevOps Solutions Sample Questions (Q354-Q359):

NEW QUESTION # 354

You have an application that consists of several Azure App Service web apps and Azure functions. You need to access the security of the web apps and the functions.

Which Azure features can you use to provide a recommendation for the security of the application?

- A. Security & Compliance in Azure Log Analytics
- B. Resource health in Azure Service Health
- C. Smart Detection in Azure Application Insights
- D. Compute & apps in Azure Security Center

Answer: D

Explanation:

Explanation

Monitor compute and app services: Compute & apps include the App Services tab, which App services: list of your App service environments and current security state of each.

Recommendations

This section has a set of recommendations for each VM and computer, web and worker roles, Azure App Service Web Apps, and Azure App Service Environment that Security Center monitors. The first column lists the recommendation. The second column shows the total number of resources that are affected by that recommendation. The third column shows the severity of the issue.

NEW QUESTION # 355

You add the virtual machines as managed nodes in Azure Automation State Configuration.

You need to configure the computer in Group7.

What should you do?

- A. Run the Register-AzureRmAutomationDscNode Azure Powershell cmdlet.
- B. Modify the RefreshMode property of the Local Configuration Manager (LCM).
- C. Modify the ConfigurationMode property of the Local Configuration Manager (LCM).
- D. Install PowerShell Core.

Answer: A

Explanation:

Topic 1, Case Study: 2Overview

Existing Environment

This is a case study Case studies are not lined separately. You can use as much exam time at you would like to complete each case. However there may be additional case studies and sections on this exam. You must manage your time to ensure that you are able to complete all questions included on this exam in the time provided.

To answer the questions included in a case study, you will need to reference information that is provided in the case study Case studies might contain exhibits and other resources that provide more information about the scenario that is described in the case study. Each question is independent of the other questions in this case study.

At the end of the case study, a review screen will appear. This screen allows you to review your answers and to make changes before you move to the next section of the exam. After you begin a new section, you cannot return to this section.

To start the case study

To display the first question in this case study, click the Next button. Use the buttons in the left pane to explore the content of the case study before you answer the questions. Clicking these buttons displays information such as business requirements, existing environment and problem statements. If the case study has an All Information tab, note that the information displayed on identical to the Information displayed on the subsequent tabs. When you are ready to answer a question, click the Question button to return to the question.

Requirements

Contoso plans to improve its IT development and operations processes implementing Azure DevOps principles.

Contoso has an Azure subscription and creates an Azure DevOps organization.

The Azure DevOps organization includes:

The Docker extension

A deployment pool named Pool7 that contains 10 Azure virtual machines that run Windows Server 2016.

The Azure subscription contains an Azure Automation account.

Planned Changes

Contoso plans to create projects in Azure DevOps as shown in the following table.

Project name	Project details
Project1	Project1 will provide support for incremental builds and third-party SDK components.
Project2	Project2 will use an automatic build policy. A small team of developers named Team2 will work independently on changes to the project. The Team2 members will not have permissions to Project2.
Project3	Project3 will be integrated with SonarQube.
Project4	Project4 will provide support for a build pipeline that creates a Docker image and pushes the image to the Azure Container Registry. Project4 will use an existing Dockerfile.
Project5	Project5 will contain a Git repository in Azure Repos and a continuous integration trigger that will initiate a build in response to any change except for changes within /folder1 of the repository.
Project6	Project6 will provide support for build and deployment pipelines. Deployment will be allowed only if the number of current work items representing active software bugs is 0.
Project7	Project7 will contain a target deployment group named Group7 that maps to Pool7. Project7 will use Azure Automation State Configuration to maintain the desired state of the computers in Group7.

Technical Requirements

Contoso identifies the following technical requirements:

- * Implement build agents for Project 1.
- * Whenever possible, use Azure resources
- * Avoid using deprecated technologies
- * Implement a code flow strategy for Project2 that will:
 - * Enable Team 2 to submit pull requests for Project2.
 - * Enable Team 2 to work independently on changes to a copy of Project2?
 - * Ensure that any intermediary changes performed by Team2 on a copy of Project2 will be subject to the same restrictions as the ones defined in the build policy of Project2.
 - * Whenever possible, implement automation and minimize administrative effort.
- * Implement Project3, Project5, Project6, and Project7 based on the planned changes.
- * Implement Project4 and configure the project to push Docker images to Azure Container Registry.

NEW QUESTION # 356

You are using the Dependency Tracker extension in a project in Azure DevOps.

You generate a risk graph for the project.

What should you use in the risk graph to identify the number of dependencies and the risk level of the project?

To answer, drag the appropriate elements to the correct data points. Each element may be used once, more than once, or not at all.

You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:

Explanation:

NEW QUESTION # 357

You plan to use Azure Kubernetes Service (AKS) to host containers deployed from images hosted in a Docker Trusted Registry.

You need to recommend a solution for provisioning and connecting to AKS. The solution must ensure that AKS is RBAC-enabled and uses a custom service principal.

Which three commands should you recommend be run in sequence? To answer, move the appropriate commands from the list of

commands to the answer area and arrange them in the correct order.

The screenshot shows a 'Commands' list on the left and an 'Answer Area' on the right. The 'Commands' list contains: 'kubectl create', 'az role assignment create', 'az aks get-credentials', 'az ad sp create-for-rbac', and 'az aks create'. The 'Answer Area' has three numbered slots (1, 2, 3) and navigation arrows. A watermark 'validvce.com' is visible across the image.

Answer:

Explanation:

This screenshot shows the 'Answer Area' with three slots containing the commands in the correct order: 1. 'az aks create', 2. 'az aks get-credentials', and 3. 'az ad sp create-for-rbac'. The 'Commands' list on the left is partially visible. A watermark 'validvce.com' is present.

Explanation

This screenshot shows the 'Commands' list with 'kubectl create' and 'az role assignment create' remaining. The 'Answer Area' contains the three commands in the correct order: 1. 'az aks create', 2. 'az aks get-credentials', and 3. 'az ad sp create-for-rbac'. A watermark 'validvce.com' is visible.

NEW QUESTION # 358

You have an Azure web app named webapp1 that uses the .NET Core runtime stack. You have an Azure Application Insights resource named AppInsights1 that collects telemetry data generated by webapp1. You plan to deploy webapp1 by using an Azure DevOps pipeline.

You need to modify the sampling rate of the telemetry data processed by AppInsights1 without having to redeploy webapp1 after each modification.

What should you do? To answer, select the appropriate options in the answer area.

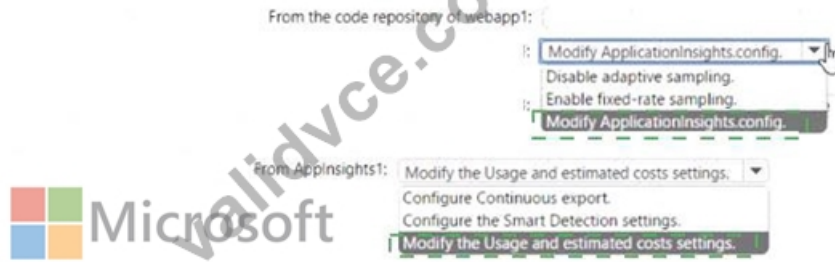

NOTE: Each correct selection is worth one point.

The screenshot shows the 'Answer Area' in the Azure portal. It displays two configuration sections: 'From the code repository of webapp1' and 'From AppInsights1'. The first section has a dropdown menu with 'Modify ApplicationInsights.config.' selected. The second section has a dropdown menu with 'Modify the Usage and estimated costs settings.' selected. A watermark 'validvce.com' is visible.
