Authoritative JN0-351 - Latest Enterprise Routing and Switching, Specialist (JNCIS-ENT) Dumps Ppt

The Enterprise Routing and Switching, Specialist (JNCIS-ENT) real dumps by Actual4Labs that are available in three formats get updates every three months as per the feedback received from industry professionals. When you will buy the Juniper JN0-351 pdf

questions and practice tests, you can open and access them instantly. The Juniper JN0-351 Practice Tests software is also updated if the Juniper JN0-351 certification exam content changes. You can download a free demo of Juniper JN0-351 PDF dumps and practice software before buying.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q119-Q124):

NEW QUESTION # 119

You want to use filter-based forwarding (FBF) on your Internet peering router to load-balance traffic to two directly connected ISPs based on the source address.

Which two statements are correct in this scenario? (Choose two.)

- A. RIB groups are used to copy routes from the inet. 0 routing table.
- B. FBF uses the no-forwarding routing instance type.
- C. FBF uses the forwarding routing instance type.
- D. RIB groups are used to hide routes in the inet. 0 routing table.

Answer: A,C

Explanation:

Option B is correct. Filter-based forwarding (FBF), also known as Policy Based Routing (PBR), uses the forwarding routing instance type¹².

Option C is correct. Routing Information Base (RIB) groups are used to copy routes from one routing table to another³⁴. In the context of FBF, RIB groups can be used to copy routes from the inet.0 routing table³⁴.

Option A is incorrect. FBF does not use the no-forwarding routing instance type¹⁵.

Option D is incorrect. RIB groups are not used to hide routes in the inet.0 routing table³⁴. They are used to share or copy routes between different routing tables³⁴.

NEW QUESTION # 120

You are receiving the BGP route shown in the exhibit from four different upstream ISPs.

Referring to the exhibit, which ISP will be selected as the active path?

- A. ISP 1
- B. ISP 3
- C. ISP 4
- D. ISP 2

Answer: C

Explanation:

In BGP, the path selection process is based on a set of attributes. The process starts by preferring the path with the highest weight, then the highest local preference, then the locally originated routes, and so on. If all these attributes are the same, then it prefers the path with the shortest AS path.

Referring to the exhibit, all four ISPs have the same weight, local preference, and origin.

However, ISP 4 has the shortest AS path. Therefore, ISP 4 will be selected as the active path.

So, option C is correct.

NEW QUESTION # 121

Which mechanism is used to share routes between routing tables?

- A. RIB groups
- B. filter-based forwarding
- C. routing instances
- D. forwarding instances

Answer: A

NEW QUESTION # 122

Exhibit

Which command displays the output shown in the exhibit?

- A. show ethernet-switching table extensive
- **B. show ethernet-switching table**
- C. show route forwarding-table
- D. show route forwarding-table family ethernet-switching

Answer: B

Explanation:

The output shown in the exhibit is a brief display of the Ethernet switching table, which shows the learned Layer 2 MAC addresses for each VLAN and interface1.

The command show ethernet-switching table displays the Ethernet switching table with brief information, such as the destination MAC address, the VLAN name, the forwarding state, and the interface name1.

The command show route forwarding-table displays the routing table information for each protocol family, such as inet, inet6, mpls, iso, and so on2. It does not show the Ethernet switching table or the MAC addresses.

The command show ethernet-switching table extensive displays the Ethernet switching table with extensive information, such as the destination MAC address, the VLAN name, the forwarding state, the interface name, the VLAN index, and the tag type1. It shows more details than the brief output shown in the exhibit.

The command show route forwarding-table family ethernet-switching displays the routing table information for the ethernet-switching protocol family, which shows the destination MAC address, the next-hop MAC address, and the interface name3. It does not show the VLAN name or the forwarding state.

NEW QUESTION # 123

What are three well-known mandatory BGP attributes? (Choose three.)

- **A. origin**
- B. local preference
- **C. AS path**
- **D. next hop**
- E. community

Answer: A,C,D

NEW QUESTION # 124

.....

For the Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) web-based practice exam no special software installation is required. Because it is a browser-based Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) practice test. The web-based Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) practice exam works on all operating systems like Mac, Linux, iOS, Android, and Windows.

JN0-351 Valid Mock Test: <https://www.actual4labs.com/Juniper/JN0-351-actual-exam-dumps.html>

Juniper Latest JN0-351 Dumps Ppt You don't have to worry about the problems since we have after-sale service 24/7 and all you need to do is to tell us clearly what questions you have, The web-based format gives results at the end of every Juniper JN0-351 practice test attempt and points the mistakes so you can get rid of them before the final attempt, Juniper Latest JN0-351 Dumps Ppt Both the formats are easy-to-use and portable and offers you real test engine.

After all, if a company invests in a new technology, JN0-351 it should expect a return on its investment, The authorization mechanism is one-way, You don't have to worry about the problems since we have PDF JN0-351 Cram Exam after-sale service 24/7 and all you need to do is to tell us clearly what questions you have.
