Salesforce Certified Platform App Builder Sample Questions (Q279-Q284):

NEW QUESTION # 279

An app builder is creating a Lightning record page and has added Mobile & Lightning Actions to the page layout.
What two components could be included on the layout to display the actions?
Choose 2 answers

- A. Activities
- B. Highlights panel
- C. Path
- D. Chatter

Answer: A,B

NEW QUESTION # 280

The app builder at Ursa Major Solar created a master-detail relationship between a parent object Galaxy__c and child object Star__c.
What is the effect of creating this type of relationship if users want to report on Galaxy__c with Star__c?

- A. A Galaxy__c with Star__c report type will be automatically created.
- B. A new custom report type will need to be created for Galaxy__c with Star__c.
- C. A Star__c report type with Galaxy__c as a field will be automatically created.
- D. A new custom report type will need to be created for Star__c with lookup fields from Galaxy__c.

Answer: A

Explanation:
When a master-detail relationship is created between two objects, Salesforce automatically creates a standard report type that allows users to report on the parent and child together.
* Why A (Galaxy__c with Star__c) is correct:Exact Extract:"When you create a master-detail relationship, Salesforce automatically creates a primary report type that includes records from both the master and its detail." - Salesforce Help | Standard Report TypesTherefore, a "Galaxy__c with Star__c" report type is automatically generated, allowing users to create reports showing all child records (Star__c) related to each parent (Galaxy__c).
Why A (Galaxy__c with Star__c) is correct:Exact Extract:"When you create a master-detail relationship, Salesforce automatically creates a primary report type that includes records from both the master and its detail." - Salesforce Help | Standard Report TypesTherefore, a "Galaxy__c with Star__c" report type is automatically generated, allowing users to create reports showing all child records (Star__c) related to each parent (Galaxy__c).
* Why not B:The parent-to-child relationship drives the report type. A "Star__c with Galaxy__c" type is not automatically created.
* Why not C or D:Custom report types are only needed if you want to include additional related objects or modify relationships; Salesforce automatically provides one for master-detail pairs.

NEW QUESTION # 281

Sales and marketing users have similar roles, and use similar record types. However sales uses 3 different fields and marketing has 5, how do you set up processes the most efficiently (something like that)

- A. 1 page layout, 1 record type, 1 profile
- B. 1 page layout, 2 record types, 2 profiles
- C. 2 page layouts, 1 record type, 2 profiles
- D. 2 page layouts, 2 record types, 2 profiles

Answer: C

NEW QUESTION # 282

A custom field contains a feedback score which is on a scale of one to five. Endusers would like a visual indicator of one to five stars based on the number found in the feedback score customer field.

- A. Text

- B. Use a custom image
- C. Formula
- D. Number

Answer: C

NEW QUESTION # 283

What option is available to an App Builder when defining an object-specific Create Record custom action?
Choose 2 answers

- A. Redirecting the end user to the detail page of the target object
- B. Specifying the fields and layout of the action.
- C. Allowing the end user to choose the record type
- D. Pre-Defining field values on the target object.

Answer: B,D

Explanation:
The app builder has two options available when defining an object-specific Create Record custom action:
* Pre-Defining field values on the target object. This means that the app builder can specify default values for certain fields on the target object when creating a new record using the custom action.
* Specifying the fields and layout of the action. This means that the app builder can choose which fields to include in the action and how they are arranged on the screen. Option B and D are not options available when defining an object-specific Create Record custom action.
