## Nutanix Certified Associate v6.10 Sample Questions (Q69-Q74):

### NEW QUESTION # 69

An administrator receives the alert:

What is the most likely cause?

- A. Other nodes in the cluster may not have enough resource available.

- B. This node in the cluster is already in maintenance mode.
- C. Another node in this cluster is already in maintenance mode.
- D. This node in the cluster may not have enough resources available.

**Answer: A**

Explanation:

When a Nutanix cluster alert occurs, indicating maintenance mode issues, the most likely cause is that another node in the cluster is already in maintenance mode. Nutanix clusters enforce restrictions to prevent more than one node from entering maintenance mode simultaneously. This ensures the cluster can maintain resiliency and availability, adhering to the redundancy factor (RF) policy. If another node is already in maintenance mode, the cluster cannot afford to have additional nodes enter maintenance without compromising data and service availability.

### NEW QUESTION # 70

When is deduplication recommended?

- A. Cold data
- B. Linked Clone VMs
- C. Full clone VMs
- D. Server workloads

**Answer: C**

Explanation:

Deduplication is most effective with full clone VMs because it reduces redundant data blocks stored on the cluster. Full clone VMs often contain identical OS and application files, making them ideal candidates for deduplication, which optimizes storage usage and improves efficiency.

Other options:

\* Server workloads: May benefit from deduplication but not as significantly as full clone VMs.

\* Linked Clone VMs: Already share base disk images, so deduplication offers limited benefits.

\* Cold data: Deduplication is less effective for data that isn't accessed frequently.

### NEW QUESTION # 71

When configuring a physical network switch in Prism Element, what information is required?

### NEW QUESTION # 72

Which Nutanix Support case priority level indicates that the system is available but experiencing issues that directly impact productivity?

- A. P4
- B. P2
- C. P3
- D. P1

**Answer: B**

Explanation:

Nutanix Support case priority levels are defined as follows:

- \* P1 (Critical):The system is down or severely impacted, requiring immediate attention.
- \* P2 (High):The system is available but experiencing issues that directly impact productivity or operations.
- \* P3 (Medium):The system is functioning, but there are non-critical issues or questions.
- \* P4 (Low):General questions or requests that do not impact system performance.

The scenario described matches P2, where the system is available but productivity is directly affected by the issue.
