Test Portworx-Enterprise-Professional Valid, Portworx-Enterprise-Professional Valid Exam Format

When you are preparing Portworx-Enterprise-Professional practice exam, it is necessary to grasp the overall knowledge points of real exam by using the latest Portworx-Enterprise-Professional pass guide. Our experts written the accurate Portworx-Enterprise-Professional test answers for exam preparation and created the study guideline for our candidates. We promise you will get high passing mark with our valid Portworx-Enterprise-Professional Exam Torrent and your money will be back to your account if you failed exam with our study materials.

The simulation of the actual Pure Storage Portworx-Enterprise-Professional test helps you feel the real Portworx-Enterprise-Professional exam scenario, so you don't face anxiety while giving the final examination. You can even access your last test results, which help to realize your mistakes and try to avoid them while taking the Pure Storage Portworx-Enterprise-Professional Certification test.

>> Test Portworx-Enterprise-Professional Valid <<

Portworx-Enterprise-Professional Valid Exam Format, Questions Portworx-Enterprise-Professional Exam

We provide you with high-quality Portworx-Enterprise-Professional learning materials for you, since the experienced experts compile and verify Portworx-Enterprise-Professional learning materials, therefore the quality and the correctness can be guaranteed. By using Portworx-Enterprise-Professional exam dumps of us, you will get a certificate successfully, hence you can enter a good enterprise and you salary will also be improved. At the same time, if you choose Portworx-Enterprise-Professional Learning

Materials of us, we have complete online and offline service stuff and after-service, and you can consult us anytime.

Pure Storage Pure Certified Portworx Enterprise Professional (PEP) Exam Sample Questions (Q63-Q68):

NEW QUESTION # 63
What is the primary function of the telemetry pod added to each node when telemetry is enabled in Portworx?

- A. To monitor the health of the node.
- B. To manage network configurations.
- C. To upload Portworx diagnostics to Pure1.

Answer: C

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
When telemetry is enabled, Portworx deploys a telemetry pod on each node whose primary function is to collect diagnostic and performance data and securely upload it to Pure1, Pure Storage's cloud-based management and analytics platform. This pod gathers metrics such as resource utilization, error rates, and configuration changes, enabling proactive monitoring and predictive analytics. The data helps Pure1 provide customers with actionable insights, alerting, and automated support features, improving cluster reliability and reducing operational overhead. The telemetry pod does not directly monitor node health (which is the role of other components) nor manage network settings; its focus is on data collection and communication with Pure1. Official Portworx telemetry documentation highlights this pod as critical for enabling cloud-based health monitoring and customer support enhancements【Pure Storage Portworx Telemetry Guide source】.

NEW QUESTION # 64
An infrastructure admin is troubleshooting a Portworx node that is down.
What should be run first to check the Kubernetes cluster status?

- A. journalctl -u kubelet to identify the problem on the node.
- B. kubectl get node -o wide to ensure cluster nodes are in the Ready status.
- C. pxctl status to check the status of Portworx on the node.

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
When troubleshooting a Portworx node that appears down, the first step is to verify the overall Kubernetes cluster health, particularly the node's readiness. Running kubectl get node -o wide provides detailed information about all cluster nodes, including their status, roles, and network details. Ensuring the affected node is marked "Ready" or identifying any abnormal conditions helps isolate whether the problem is at the Kubernetes level or specific to Portworx. If the node is not Ready, issues may lie with Kubernetes components or node-level hardware/network problems. After confirming node status, further investigation using pxctl status or examining kubelet logs with journalctl can pinpoint Portworx-specific or system-level failures. Portworx operational best practices recommend starting with Kubernetes node health checks before delving into Portworx or system logs to effectively triage issues【Pure Storage Portworx Troubleshooting Guide source】.

NEW QUESTION # 65
An administrator deploys Portworx in the "portworx" namespace.
What command should the administrator use to check status of only the Portworx pods?

- A. kubectl -n portworx get pods -l name=portworx
- B. kubectl -n portworx get storagecluster
- C. kubectl -n portworx get pods -o wide

Answer: A

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
To view the status of only Portworx pods within the "portworx" namespace, administrators should use label selectors with kubectl.

The command kubectl -n portworx get pods -l name=portworx filters pods by the label name=portworx, showing only pods related to the Portworx deployment. This is more precise than simply listing all pods with -o wide, which includes unrelated pods. Checking Portworx pods' status is crucial for monitoring cluster health, identifying pod restarts, or troubleshooting failures. The Portworx installation manifests and documentation specify labels applied to Portworx pods, enabling operators to filter efficiently. Using this command supports focused operational monitoring and streamlined debugging within Kubernetes environments running Portworx【Pure Storage Portworx Kubernetes Guide source】.

NEW QUESTION # 66

When utilizing volume encryption, what is a supported external key manager?

- A. Static keys stored in an S3 bucket
- B. Hashicorp Vault
- C. Microsoft Key Management Services

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
Hashicorp Vault is a widely supported external Key Management System (KMS) integrated with Portworx for volume encryption. It offers robust capabilities including secure key generation, storage, rotation, and access control, making it well-suited for managing encryption keys in enterprise environments. Integrating Portworx with Hashicorp Vault enables automated and secure key retrieval during volume provisioning and use, ensuring compliance with security policies and regulations. Unlike static keys stored in S3 buckets, which lack dynamic security controls, Hashicorp Vault provides granular policy enforcement and audit logging. Microsoft Key Management Services (KMS) is not currently supported as an external KMS for Portworx encryption. Portworx security documentation emphasizes Hashicorp Vault's importance in maintaining secure key lifecycle management for encrypted volumes, highlighting it as the preferred KMS solution in multi-cloud and hybrid environments【Pure Storage Portworx Security Guide source】.

NEW QUESTION # 67

An administrator wants to check the size, availability, and usage of all pools in the cluster.
Which command should the administrator use?

- A. pxctl cluster provision-status
- B. pxctl service pool show
- C. kubectl get storagecluster

Answer: B

Explanation:
Comprehensive and Detailed Explanation From Exact Extract:
To view detailed information about storage pools in a Portworx cluster-including size, availability, usage, and health-administrators should use the command pxctl service pool show. This CLI command provides a comprehensive overview of all storage pools configured on cluster nodes, including pool IDs, device names, pool sizes, free space, and status. It helps administrators monitor resource utilization, detect degraded pools, and plan capacity expansions. While kubectl get storagecluster shows the overall cluster CRD status and pxctl cluster provision-status shows provisioning status, neither provides detailed pool-level insights. Portworx's operational documentation recommends pxctl service pool show as the definitive command for monitoring pool resources and ensuring storage health across the cluster【Pure Storage Portworx CLI Guide source】.
