

010-160 Certification Dump, 010-160 Real Exams

2025 Latest Exam4Docs 010-160 PDF Dumps and 010-160 Exam Engine Free Share: <https://drive.google.com/open?id=1VvZoHrT6L3cq0kqL5GJz5O7zE0ZjzAdi>

Our website is a leading dumps provider worldwide that offers the latest valid test questions and answers for certification test, especially for Lpi practice test. We paid great attention to the study of 010-160 vce braindumps for many years and are specialized in the questions of actual test. You can find everything that you need to pass test in our 010-160 learning materials.

The Power of the Command Line

- Archiving Files on the Command Line – it is all about the process of archiving files in the user home directory. The knowledge areas here include Archives, Compression, Files, and Directories;
- Searching and Extracting Data from Files – you should know how to extract and search data from files in the home directory as well as explore Basic Regular Expressions, I/O Redirection, and Command Line Pipes;
- Turning Commands into a Script – the main task here is to turn repetitive commands into simple scripts. The awareness of the common text editors and basic shell scripting is the main domains you should know.

Free PDF 2025 Pass-Sure Lpi 010-160: Linux Essentials Certificate Exam - version 1.6 Certification Dump

Our 010-160 practice questions are not famous for nothing. As long as you choose our 010-160 study guide, you will find that the exam questions and answers are always the most accurate and up-to-date. It is all due to the hard work of our professionals who always keep a close eye on the updating. The 010-160 learning braindumps are regularly updated in line with the changes introduced in the exam contents. You will always find our 010-160 exam simulating highly relevant to your needs.

Security and File Permissions

- Managing Ownership and File Permissions – manipulating and understanding the ownership settings and file permissions. Also, one's skills in working with file and directory permissions and ownership are important.
- Creating Users and Groups – this section covers User IDs, User, and Group Commands.
- Basic Security and Identifying User Types – various types of users on the Linux system. It also covers the details of System Users, Root, and Standard Users.
- Special Directories and Files – it is all about the special directories on the Linux system that include special permissions. This includes the symbolic links and the usage of temporary files and directories.

Lpi Linux Essentials Certificate Exam - version 1.6 Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following commands can be used to resolve a DNSname to an IP address?

- A. query
- B. iplookup
- C. dns
- D. dnsname
- E. host

Answer: E

NEW QUESTION # 60

Which of the following programs are web servers? (Choose two.)

- A. NGINX
- B. Postfix
- C. Apache HTTPD
- D. Dovecot
- E. Curl

Answer: A,C

Explanation:

Explanation

NEW QUESTION # 61

Which of the following commands creates an archive filework.tarfrom the contents of the directory./ work/?

- A. tar work > work.tar
- B. tar -create work.tgz -content ./work/
- C. tar --new work.tar ./work/
- D. tar work.tar < ./work/
- E. tar -cf work.tar ./work/

Answer: E

Explanation:

Explanation

The tar command in Linux is used to create, extract, list, and manipulate archive files¹. The -c option tells the command to create a new archive file. The -f option specifies the name of the archive file. The last argument is the name of the directory or file to be archived. Therefore, the command tar -cf work.tar ./work/ will create an archive file named work.tar from the contents of the directory ./work/. The other options are either invalid or do not create the desired archive file. Option A uses an unrecognized option --new. Option C uses an incorrect option --content and an incorrect extension .tgz for a plain tar archive. Option D and E use an incorrect syntax for redirecting the input or output of the tar command. NEW QUESTION # 62

Which of the following commands sets the variable USERNAME to the value bob?

- A. USERNAME<=bob
- B. set USERNAME bob
- C. \$USERNAME==bob
- D. var USERNAME=bob
- E. USERNAME=bob

Answer: E

NEW QUESTION # 63

What is true about a recursive directory listing?

- A. It includes a preview of content for each file in the directory.
- B. It includes details of file system internals, such as inodes.
- C. It includes ownership information for the files.
- D. It includes the permissions of the directory listed.
- E. It includes the content of sub-directories.

Answer: E

Explanation:

Explanation

A recursive directory listing is a way of displaying the files and folders in a directory and all its sub-directories. The recursive option can be used with various commands, such as `ls`, `find`, or `dir`, to list the files recursively. For example, the command `ls -R` will list all the files and folders in the current directory and any sub-directories, showing the hierarchy of the file system.^{1,2,3} A recursive directory listing does not include the permissions, ownership, or file system details of the files, unless specified by other options. For example, the command `ls -lR` will list the files recursively and also show the permissions, ownership, size, and modification date of each file.¹ A recursive directory listing also does not include a preview of the content of each file, unless specified by other options. For example, the command `ls -R --file-type` will list the files recursively and also show the file type indicator, such as `/` for directories, `*` for executable files, `@` for symbolic links, etc.¹ References: 1: `ls` (Unix) - Wikipedia 2: Recursively List all directories and files - Stack Overflow 3: Why is `ls -R` called "recursive" listing? - Ask Ubuntu
