

# Top DP-300 Dumps & Premium DP-300 Exam

P.S. Free & New DP-300 dumps are available on Google Drive shared by Pass4cram: <https://drive.google.com/open?id=1nmI2OGSimImraVbLeBSW4p6C8IO2mk>

Pass4cram's DP-300 exam training materials are proved to be effective by some professionals and examinees that have passed DP-300 exam, Pass4cram's DP-300 exam dumps are almost the same with real exam paper. It can help you pass DP-300 certification exam. After you purchase our DP-300 VCE Dumps, if you fail DP-300 certification exam or there are any problems of DP-300 test training materials, we will give a full refund to you. We believe that our Pass4cram's DP-300 vce dumps will help you.

Attending Pass4cram, you will have best exam dumps for the certification of DP-300 exam tests. We offer you the most accurate DP-300 exam answers that will be your key to pass the certification exam in your first try. There are the best preparation materials for your DP-300 Practice Test in our website to guarantee your success in a short time. Please totally trust the accuracy of questions and answers.

## **Administering Relational Databases on Microsoft Azure pass4sure practice & DP-300 pdf training material**

It is heartening to announce that all Microsoft users will be allowed to capitalize on a free Microsoft DP-300 exam questions demo of all three formats of Microsoft DP-300 practice test. It will make them scrutinize how our formats work and what we offer them, for example, the form and pattern of Microsoft DP-300 Exam Dumps, and their relevant and updated answers.

## **Microsoft Administering Relational Databases on Microsoft Azure Sample Questions (Q274-Q279):**

**NEW QUESTION # 274**

**HOTSPOT**

You need to implement the monitoring of SalesSQLDb1. The solution must meet the technical requirements. How should you collect and stream metrics? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Hot Area:

**Answer Area**

Collect metrics from:

	▼
The database only	
The elastic pool and the database	
The elastic pool only	
The server, the elastic pool, and the database	

Stream metrics to:

	▼
Azure Event Hubs	
Azure Log Analytics	
Azure Storage	

**Answer:**

Explanation:

**Answer Area**

Collect metrics from:

	▼
The database only	
The elastic pool and the database	
The elastic pool only	
The server, the elastic pool, and the database	

Stream metrics to:

	▼
Azure Event Hubs	
Azure Log Analytics	
Azure Storage	

Explanation:

Box 1: The server, the elastic pool, and the database

Scenario:

SalesSQLDb1 is in an elastic pool named SalesSQLDb1Pool.

Litware technical requirements include: all SQL Server and Azure SQL Database metrics related to CPU and storage usage and limits must be analyzed by using Azure built-in functionality.

Box 2: Azure Event hubs

Scenario: Migrate ManufacturingSQLDb1 to the Azure virtual machine platform

Event hubs are able to handle custom metrics.

Incorrect Answers:

Azure Log Analytics

Azure metric and log data are sent to Azure Monitor Logs, previously known as Azure Log Analytics, directly by Azure. Azure SQL Analytics is a cloud only monitoring solution supporting streaming of diagnostics telemetry for all of your Azure SQL databases.

However, because Azure SQL Analytics does not use agents to connect to Azure Monitor, it does not support monitoring of SQL Server hosted on-premises or in virtual machines.

Monitor and Optimize Operational Resources

Question Set 2

## SIMULATION

You need to ensure that indexes are created automatically for all the databases on sql12345678. You may need to use SQL Server Management Studio and the Azure portal.

### Answer:

#### Explanation:

Automatic tuning SQL Server identifies and fixes performance issues caused by query execution plan choice regressions. Automatic tuning in Azure SQL Database and SQL database in Microsoft Fabric also creates necessary indexes and drops unused indexes.

Step 1: To enable automatic tuning on a server in Azure SQL Database, navigate to the server in the Azure portal [Select sql12345678] and then select Automatic tuning in the menu.

OPTION	DESIRED STATE	CURRENT STATE
FORCE PLAN	ON OFF INHERIT	OFF Forced by user
CREATE INDEX	ON OFF INHERIT	OFF Forced by user
DROP INDEX	ON OFF INHERIT	OFF Forced by user

Apply

Step 2: Select CREATE\_INDEX, and change it to enabled.

Enable automatic tuning on server

On the server level, you can choose to inherit automatic tuning configuration from "Azure Defaults" or not to inherit the configuration. Azure defaults are FORCE\_LAST\_GOOD\_PLAN enabled, CREATE\_INDEX disabled, and DROP\_INDEX disabled.

Step 3: Click the Apply button.

Automatic tuning options on a server are applied to all databases on this server. By default, all databases inherit configuration from their parent server, but this can be overridden and specified for each database individually.

Reference:

<https://learn.microsoft.com/en-us/azure/azure-sql/database/automatic-tuning-enable>

## NEW QUESTION # 276

What should you implement to meet the disaster recovery requirements for the PaaS solution?

- A. geo-replication
- B. Availability Zones
- C. Always On availability groups
- D. failover groups

### Answer: D

#### Explanation:

##### Explanation

Scenario: In the event of an Azure regional outage, ensure that the customers can access the PaaS solution with minimal downtime.

The solution must provide automatic failover.

The auto-failover groups feature allows you to manage the replication and failover of a group of databases on a server or all databases in a managed instance to another region. It is a declarative abstraction on top of the existing active geo-replication feature, designed to simplify deployment and management of geo-replicated databases at scale. You can initiate failover manually or you can

delegate it to the Azure service based on a user-defined policy.

The latter option allows you to automatically recover multiple related databases in a secondary region after a catastrophic failure or other unplanned event that results in full or partial loss of the SQL Database or SQL Managed Instance availability in the primary region.

Reference:

<https://docs.microsoft.com/en-us/azure/azure-sql/database/auto-failover-group-overview>

### NEW QUESTION # 277

You have an Azure SQL database that contains a table named factSales. FactSales contains the columns shown in the following table.

Name	Data type
SalesID	Int
Product	Int
Total Number	Numeric(8,4)
Tax Number	Numeric(8,4)
SalesRep	Varchar(30)

FactSales has 6 billion rows and is loaded nightly by using a batch process.

Which type of compression provides the greatest space reduction for the database?

- A. page compression
- **B. columnstore archival compression**
- C. columnstore compression
- D. row compression

**Answer: B**

Explanation:

Section: [none]

Explanation:

Columnstore tables and indexes are always stored with columnstore compression. You can further reduce the size of columnstore data by configuring an additional compression called archival compression.

Note: Columnstore - The columnstore index is also logically organized as a table with rows and columns, but the data is physically stored in a column-wise data format.

Incorrect Answers:

B: Rowstore - The rowstore index is the traditional style that has been around since the initial release of SQL Server.

For rowstore tables and indexes, use the data compression feature to help reduce the size of the database.

Reference:

<https://docs.microsoft.com/en-us/sql/relational-databases/data-compression/data-compression>

### NEW QUESTION # 278

#### SIMULATION

You need to ensure that db1 supports a minimum of one vCore, a maximum of four vCores, and a database of up to 45 GB.

To complete this task, sign in to the virtual machine. You may need to use SQL Server Management Studio and the Azure portal.

**Answer:**

Explanation:

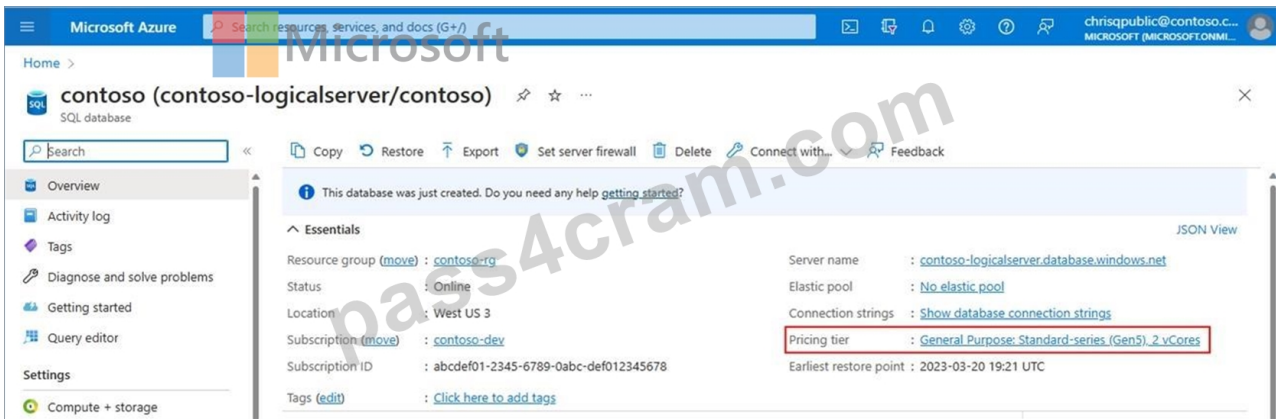

vCore purchasing model - Azure SQL Database

Select hardware configuration

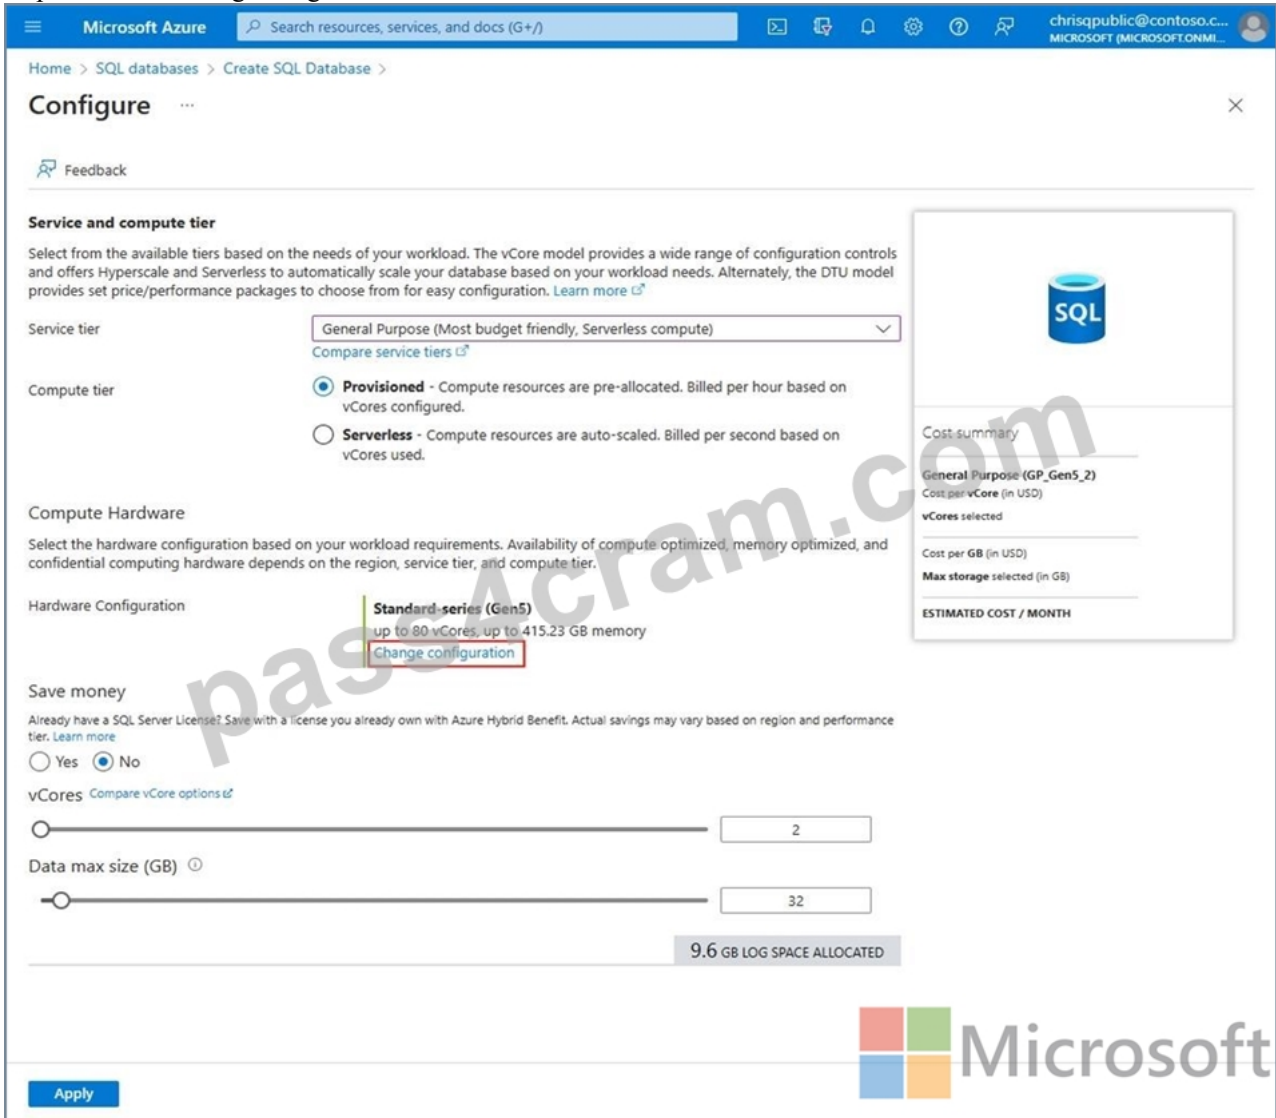

You can select hardware configuration for a database or elastic pool in SQL Database at the time of creation. You can also change hardware configuration of an existing database or elastic pool.

To select a hardware configuration when creating a SQL Database or pool Step 1: Start Azure portal Step 2: Go the Azure SQL page, select db1.

Step 3: On the Overview page, select the Pricing tier link:

Step 4: Select the Change configuration link:

Step 5: Select the desired hardware configuration:

Specify:

Max vCores: 4

Max storage: 45 GB

## SQL hardware configuration ...

SQL database

### Available hardware configurations

Based on your workload requirements, select from available hardware configurations listed below.

Configuration	Description	Max vCores	Max memory	Max storage
Standard-series (Gen5)	Balanced memory and compute	80	415.23 GB	4 TB
M-Series	Memory optimized	--	--	--
FSv2-series	Compute optimized	--	--	--
DC-series	Enables confidential computing	--	--	--
