

Valid Real FCP_FSA_AD-5.0 Exam, FCP_FSA_AD-5.0 Free Learning Cram

After taking a bird's eye view of applicants' issues, Exams-boost has decided to provide them with the real FCP_FSA_AD-5.0 Questions. These FCP_FSA_AD-5.0 dumps pdf is according to the new and updated syllabus so they can prepare for FCP_FSA_AD-5.0 certification anywhere, anytime, with ease. A team of professionals has made the product of Exams-boost after much hard work with their complete potential so the candidates can prepare for FCP - FortiSandbox 5.0 Administrator (FCP_FSA_AD-5.0) practice test in a short time.

Fortinet FCP_FSA_AD-5.0 Exam Syllabus Topics:

| Topic | Details |
|---------|---|
| Topic 1 | <ul style="list-style-type: none">• Deployment and system settings: This domain covers understanding FortiSandbox deployment within different stages of the Cyber Kill Chain, along with configuring system settings, high availability (HA) clusters, and troubleshooting system-related issues. |
| Topic 2 | <ul style="list-style-type: none">• Scanning and rating components: This section focuses on FortiSandbox scanning mechanisms, including scanning components, managing guest virtual machines, and configuring scan options to properly analyze and rate suspicious files. |
| Topic 3 | <ul style="list-style-type: none">• Integration: This domain explains how to integrate FortiSandbox within the Fortinet Security Fabric and with third-party tools, as well as identifying ATP deployments and resolving integration-related issues. |
| Topic 4 | <ul style="list-style-type: none">• Results analysis: This section involves understanding common attack vectors, analyzing malware behavior, and interpreting scan job reports to assess threats and make informed security decisions. |

FCP_FSA_AD-5.0 Free Learning Cram | FCP_FSA_AD-5.0 Latest Braindumps Pdf

Exams-boost presents you with their effective Fortinet FCP_FSA_AD-5.0 exam dumps as we know that the registration fee is very high (from \$100-\$1000). Exams-boost product covers all the topics with a complete collection of actual FCP_FSA_AD-5.0 exam questions. We also offer free demos and up to 1 year of free Fortinet Dumps updates. So, our Fortinet FCP_FSA_AD-5.0 prep material is the best to enhance knowledge which is helpful to pass FCP - FortiSandbox 5.0 Administrator (FCP_FSA_AD-5.0) on the first attempt.

Fortinet FCP - FortiSandbox 5.0 Administrator Sample Questions (Q34-Q39):

NEW QUESTION # 34

Refer to the exhibit.

Which command must you use to configure the worker node? (Choose one answer)

- A. `hc-worker -a -s10.25.1.30 -p<password>`
- B. `hc-worker -a -s10.75.1.254 -p<password>`
- C. `hc-worker -a -s10.50.1.30 -p<password>`
- **D. `hc-worker -a -s10.25.1.50 -p<password>`**

Answer: D

Explanation:

From the High Availability and Management lesson, the Study Guide states:

"You must configure the HA group name, password, and the cluster virtual IP. The worker nodes provide load balancing. The primary node distributes scan jobs to the worker nodes."

"You must configure the HA group name, password, and the virtual IP only on the primary node... Devices will interact with the cluster using this virtual IP." From the exhibit topology:

Cluster Virtual IP address = 10.25.1.50

Primary Node port1 = 10.25.1.30

Secondary Node port1 = 10.25.1.40

Worker Node port1 = 10.75.1.10

The worker node must be configured to point to the Cluster Virtual IP (10.25.1.50), not the individual primary node IP. This is because worker nodes join the cluster by connecting to the cluster virtual IP address.

Therefore the correct command is: `hc-worker -a -s10.25.1.50 -p<password>`

NEW QUESTION # 35

Refer to the CLI configuration below.

```
set device-authorization -a
```

How will FortiSandbox authorize new FortiClient devices after this command? (Choose one answer)

- **A. When a new FortiClient registers, FortiSandbox will authorize it automatically.**
- B. When a new device other than FortiClient registers, FortiSandbox will authorize it automatically.
- C. When a Fabric device is not authorized, FortiSandbox will authorize it automatically.
- D. When a new FortiClient registers, it inherits authorization status from the managing EMS or FortiGate.

Answer: A

Explanation:

The Study Guide explains the default behavior first: "You must authorize FortiClient EMS on FortiSandbox. FortiSandbox automatically authorizes all FortiClient endpoints managed by an authorized FortiClient EMS." It then adds the key point for this question: "To change the default FortiClient authorization behavior, use the command shown on this slide to authorize FortiClient endpoints using FortiSandbox CLI. By default, FortiClient inherits its authorization status from the managing EMS or FortiGate." Because the question specifically shows the CLI command `set device-authorization -a`, it is asking about the behavior after changing the default. The default inheritance model described in option A applies before the override. After this command, FortiSandbox is set to authorize FortiClient endpoints directly and automatically, which makes C the correct answer. Option B is incorrect because the command is specifically about FortiClient endpoints, not other devices in general. Option D is too broad and does not match the Study Guide's explanation, which is limited to FortiClient authorization behavior.

NEW QUESTION # 36

Refer to the exhibit.

Which command must you use to configure the FortiSandbox device as the primary node? (Choose one answer)

- **A. `hc-settings -si iport1 -a10.25.1.50`**
- B. `hc-settings -si iport1 -a10.25.1.254`
- C. `hc-settings -si iport1 -a10.25.1.40`
- D. `hc-settings -si iport1 -a10.25.1.30`

Answer: A

Explanation:

The exhibit labels 10.25.1.50 as the cluster virtual IP address. The Study Guide explains that in HA configuration, "You must configure the HA group name, password, and the virtual IP only on the primary node." It also says: "You must also configure an external interface for external communication and an IP address that will be used as a virtual IP for the whole cluster. Devices will interact with the cluster using this virtual IP." That is why the command for the primary node must point to the cluster virtual IP, not to the individual port1 addresses of the primary, secondary, or upstream firewall. In the exhibit, 10.25.1.30 is the primary node's own port1 IP, 10.25.1.40 is the secondary node's port1 IP, and 10.25.1.254 is the network device. The only address that matches the required cluster virtual IP is 10.25.1.50, so the correct command is `hc-settings -si iport1 -a10.25.1.50`.

NEW QUESTION # 37

Which three actions does FortiSandbox perform when it is integrated with FortiMail for advanced threat protection (ATP)? (Choose three answers)

- A. It queues email during analysis.
- B. It updates FortiGuard databases.
- C. It analyzes file and URL objects.
- D. It assigns and returns a rating for analyzed objects.
- E. It submits objects for sandbox scanning.

Answer: A,C,D

NEW QUESTION # 38

There is a connectivity problem between FortiSandbox and the FortiGuard distribution servers. You observe that a firewall located between FortiSandbox and the internet allows traffic on ports TCP/4443, UDP/8888, and UDP/53. What is the cause of the issue? (Choose one answer)

- A. They must allow UDP 514 out
- B. They must allow TCP 8890 out
- C. They must allow TCP 443 out
- D. They must allow UDP 443 out

Answer: C

Explanation:

From the Deployment and System Settings lesson, the Study Guide states:

"The test-network command checks FortiGuard services as its last set of validation tests. These include the FortiGuard distribution network (FDN) accessibility, FDN contract expiration, web filtering service, and the community cloud service. All these FortiGuard services should be reachable and valid for FortiSandbox to be effective."

"The diagnose-debug fdn command provides details around FortiSandbox and the FortiGuard Distribution Network (FDN) communication and updates." FortiGuard Distribution Network (FDN) communication requires TCP/443 for HTTPS-based update and licensing communication. The current firewall rules allow TCP/4443 (API/management), UDP/8888 (FortiGuard queries), and UDP/53 (DNS), but TCP/443 is missing - which is the standard port required for FortiGuard FDN connectivity and license validation.

NEW QUESTION # 39

.....

We all know that the importance of the FCP - FortiSandbox 5.0 Administrator (FCP_FSA_AD-5.0) certification exam has increased. Many people remain unsuccessful in its FCP_FSA_AD-5.0 exam because of using invalid FCP_FSA_AD-5.0 Practice Test material. If you want to avoid failure and loss of money and time, download actual FCP_FSA_AD-5.0 Questions of Exams-boost.
