Fortinet NSE 6 - FortiSOAR 7.3 Administrator Sample Questions (Q28-Q33):

NEW QUESTION # 28

Refer to the exhibit.

Which two statements about the recommendation engine are true? (Choose two.)

- A. The alert severity is High, but the recommendation is for it to be set to Medium
- B. There are no playbooks that can be run on the recommended alerts using the recommendation panel
- C. The recommendation engine is set to automatically accept suggestions.
- D. The dataset is trained to predict the Severity and Type fields.

Answer: A,D

Explanation:

The Recommendation Engine in FortiSOAR is designed to assist in alert triage by suggesting values for certain fields based on historical data and machine learning models. In this case, the engine is trained to predict both the Severity and Type fields, suggesting values that align with past incidents and threat intelligence. Although the current alert severity is High, the recommendation engine has suggested adjusting it to Medium based on the pattern of similar past alerts, indicating a less critical threat level than initially perceived. This functionality helps analysts by providing data-driven insights, which can optimize alert handling and resource allocation.

NEW QUESTION # 29

Which playbook collection includes system-level playbooks that FortiSOAR uses to auto-populate date fields when the status of incident or alert records changes to Resolved or Closed?

- A. SLA Management Playbooks
- B. Approval/Manual Task Playbooks
- C. Utilities Playbooks
- D. Schedule Management Playbooks

Answer: A

Explanation:

The SLA Management Playbooks collection in FortiSOAR includes system-level playbooks designed to auto-populate date fields when the status of incident or alert records changes to Resolved or Closed. This functionality ensures that relevant date fields, such as resolution date or closure date, are accurately filled based on SLA criteria. By using SLA Management Playbooks, FortiSOAR automatically maintains date-related data integrity, which is essential for tracking and reporting purposes.

NEW QUESTION # 30

What are two use cases for configuring a FortiSOAR HA cluster?
(Choose two.)

- A. Scaling
- B. Multi-tenancy
- C. Data externalization
- D. Disaster recovery

Answer: A,D

NEW QUESTION # 31

View the exhibit:

What does the command output mean?

```
root@fortisoar ~]# csadm db --check-connection
Failed to connect the instance.
```

- A. The local PostgreSQL database is disabled on the FortiSOAR instance.
- B. There is no connectivity between the PostgreSQL databases of the primary and secondary FortiSOAR instances.
- C. The local PostgreSQL database is configured on the FortiSOAR instance.
- D. The configuration to enable database externalization has not been completed.

Answer: D

NEW QUESTION # 32

Refer to the exhibit.

Which statement correctly describes the user's login behavior?

- A. The user is sent to a waiting queue if there are named users logged in.
- B. The user can log in only if there are enough seats available.
- C. The user has an active concurrent session that does not time out.
- D. The user will always be able to draw from the concurrent pool and log in.

Answer: B

Explanation:

In FortiSOAR, when a user is configured with "Concurrent" access type, their ability to log in depends on the availability of concurrent user seats. This means the user can only log in if there are available seats in the concurrent pool. If all seats are occupied,

the user must wait until a seat becomes free. This configuration allows multiple users to share a pool of licenses, making it suitable for environments where not all users need constant access.
