Palo Alto Networks Certified Cybersecurity Practitioner Sample Questions (Q18-Q23):

NEW QUESTION # 18
Which Palo Alto Networks tool is used to prevent endpoint systems from running malware executables such as viruses, trojans, and rootkits?

- A. Cortex XDR
- B. Expedition
- C. App-ID

- D. AutoFocus

Answer: A

Explanation:
Cortex XDR is a cloud-based, advanced endpoint protection solution that combines multiple methods of prevention against known and unknown malware, ransomware, and exploits. Cortex XDR uses behavioral threat protection, exploit prevention, and local analysis to stop the execution of malicious programs before an endpoint can be compromised. Cortex XDR also enables remediation on the endpoint following an alert or investigation, giving administrators the option to isolate, terminate, block, or quarantine malicious files or processes. Cortex XDR is part of the Cortex platform, which provides unified visibility and detection across the network, endpoint, and cloud. References:

NEW QUESTION # 19
Based on how much is managed by the vendor, where can CaaS be situated in the spread of cloud computing services?

- A. between On-Prem and IaaS
- B. between IaaS and PaaS
- C. between PaaS and FaaS
- D. between FaaS and Serverless

Answer: B

Explanation:
CaaS, or Containers-as-a-Service, is a cloud service that allows users to manage and deploy applications using containers and clusters. CaaS can be situated between IaaS and PaaS in the spread of cloud computing services, based on how much is managed by the vendor. IaaS, or Infrastructure-as-a-Service, provides the lowest level of abstraction, where users have to manage the servers, storage, network, and operating system.
PaaS, or Platform-as-a-Service, provides a higher level of abstraction, where users only have to manage the application code and data. FaaS, or Function-as-a-Service, provides the highest level of abstraction, where users only have to manage the functions or logic of the application. CaaS falls in between IaaS and PaaS, as it provides users with more control over the container orchestration and configuration than PaaS, but also simplifies the infrastructure management and scaling than IaaS123. NEW QUESTION # 20
On which security principle does virtualization have positive effects?

- A. availability
- B. integrity
- C. confidentiality
- D. non-repudiation

Answer: A

Explanation:
Virtualization improves the availability of IT systems and resources by enabling features such as12:
* Resource optimization: Virtualization allows multiple virtual instances to share the same physical infrastructure, reducing hardware costs and increasing resource utilization.
* Scalability: Virtualization enables rapid provisioning and deprovisioning of virtual instances, allowing organizations to scale up or down their IT capacity according to demand.
* Disaster recovery: Virtualization facilitates backup and replication of virtual instances, allowing organizations to restore their IT systems and data in the event of a disaster or outage.
* Fault tolerance: Virtualization supports high availability and load balancing of virtual instances, ensuring that IT systems and services remain operational even if one or more virtual instances fail. References: Virtualization Benefits: How Virtualization Improves

NEW QUESTION # 22
Anthem server breaches disclosed Personally Identifiable Information (PII) from a number of its servers. The infiltration by hackers was attributed to which type of vulnerability?

- A. access by using a third-party vendor's password
- B. an intranet-accessed contractor's system that was compromised
- C. exploitation of an unpatched security vulnerability
- D. a phishing scheme that captured a database administrator's password

Answer: D

Explanation:
The Anthem data breach of 2015 was caused by a phishing scheme that captured a database administrator's password. According to the U.S. Department of Health and Human Services (HHS) Office for Civil Rights (OCR), hackers sent phishing emails to an Anthem subsidiary. At least one employee responded. Attackers were able to plant malware on the company's system and gain remote access to confidential information1. The breach exposed the electronic protected health information of almost 79 million people, including names, Social Security numbers, medical identification numbers, addresses, dates of birth, email addresses, and employment information2.
