NEW QUESTION # 22

In what mode do MHOs process traffic?

- A. MHOs process traffic in Active-Active mode
- B. MHOs process traffic in VSLS mode
- C. MHOs process traffic in Active-Standby mode
- D. MHOs process traffic in load sharing mode

Answer: A

Explanation:

MHOs process traffic in Active-Active mode, which means that both MHOs are active and share the load of the traffic that is sent to and from the SGMs. Active-Active mode provides better performance and scalability than Active-Standby mode, which only uses one MHO at a time and keeps the other as a backup. Active-Active mode also allows for faster failover and recovery in case of an MHO failure, as the surviving MHO can take over the traffic without interruption.
