# Easiest and Quick Way to Crack SAP C-S4TM-2023 Exam

# SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q10-Q15):

**NEW QUESTION # 10**
Which of the following configuration settings can be used to automatically assign business partners? Note:
There are 2 correct answers to this question.

- A. Partner function
- B. Business function
- C. Freight unit type
- D. Freight order type

**Answer: A,D**

Explanation:
In SAP S/4HANA Transportation Management, business partners (e.g., carriers, shippers) can be automatically assigned to documents using specific configuration settings. According to the SAP documentation:
* Partner function (A): Partner functions define roles (e.g., carrier, ordering party) and can be configured with determination rules to automatically assign business partners based on criteria like location or agreement.
* Freight order type (B): The freight order type can include a partner determination profile that specifies rules for automatically assigning business partners, such as carriers, to the freight order.
The other options are incorrect:
* Freight unit type (C) controls freight unit creation but does not directly handle business partner assignment.
* Business function (D) is a system-level setting for enabling features, not for partner assignment.

**NEW QUESTION # 11**
In an ERP system that is processing sales orders, situations arise when an order is created for a new customer that is a one time transaction. Transportation will have to be planned and this could cause a large amount of master data that will quickly become obsolete.
One-time-ship-to locations can be created in two ways, as follows:
There are 2 correct answers to this question.

- A. Manually, by the user in the forwarding order user interface
- B. Automatically (by the system), based on the address of an incoming transportation request to SAP TM
- C. Division

**Answer: A,B**

**NEW QUESTION # 12**
You want to configure event based charges. To which document type can you assign an event profile?
There are 2 correct answers to this question.

- A. Freight Settlement Document
- B. Forwarding Order
- C. Freight Booking
- D. Transportation Unit

**Answer: B,C**

**NEW QUESTION # 13**
You want to set up charge calculation for freight orders. Valid charges should consist of a base charge based on the distance and gross weight of the freight order, and a supplemental charge per container that is included in the freight order. Multiple containers are allowed for each freight order, and the charge is based on the container type. The container type can be small, medium, or large.
What is the minimum number of charge lines with instruction type "standard" that you must set up?

- A. 0
- B. 1
- C. 2
- D. 3

**Answer: C**

Explanation:
To set up charge calculation for freight orders in SAP S/4HANA Transportation Management, you need to define charge lines in the calculation sheet with the instruction type "standard" to represent the different types of charges. According to the SAP documentation:
* Abase chargebased on distance and gross weight requires one charge line with instruction type
"standard" to calculate the cost using a rate table that considers these parameters.
* Asupplemental charge per containerbased on container type (small, medium, large) requires a second charge line with instruction type "standard" to apply the container-specific charge, which can be defined in a rate table with scales for container types.
Since the requirement involves two distinct charge calculations (base charge and container charge), the minimum number of charge lines with instruction type "standard" is2.
The other options are incorrect:
* A (0)is not possible, as charges require at least one charge line.
* C (1)is insufficient, as it cannot cover both the base charge and container charge.
* D (3)is unnecessary, as the container types can be handled within a single charge line using a rate table with scales.

**NEW QUESTION # 14**
You are using SAP S/4HANA without geographical services.
How can you determine the geographical coordinates for a location? Note: There are 2 correct answers to this question.

- A. The location coordinates are determined at street level.
- B. The location coordinates are determined at region or country level.
- C. The location coordinates cannot be determined.
- D. The location coordinates are determined based on manual entry.

**Answer: A,B**
