

# Exam Development-Lifecycle-and-Deployment-Architect Objectives Pdf | Valid Development-Lifecycle-and-Deployment-Architect Test Blueprint

The accuracy rate of BraindumpStudy Development-Lifecycle-and-Deployment-Architect exam certification training materials is high with wide coverage. It not only can improve your cultural knowledge, but also improve your operation level. It not only makes you become IT elite, but also make you have a well-paid job that others admire. Before buying our Development-Lifecycle-and-Deployment-Architect Certification Training materials, you can download Development-Lifecycle-and-Deployment-Architect free demo and answers on probation on BraindumpStudy website.

In order to survive in the society and realize our own values, learning our Development-Lifecycle-and-Deployment-Architect practice engine is the best way. Never stop improving yourself. The society warmly welcomes struggling people. You will really benefit from your correct choice. Our Development-Lifecycle-and-Deployment-Architect Study Materials are ready to help you pass the exam and get the certification. You can certainly get a better life with the certification. Please make a decision quickly. We are waiting for you to purchase our Development-Lifecycle-and-Deployment-Architect exam questions.

## Valid Development-Lifecycle-and-Deployment-Architect Test Blueprint, Test Development-Lifecycle-and-Deployment-Architect Sample Online

If you are finding a study material to prepare your exam, our material will end your search. Our Development-Lifecycle-and-Deployment-Architect exam torrent has a high quality that you can't expect. I think our Salesforce Certified Development Lifecycle and Deployment Architect prep torrent will help you save much time, and you will have more free time to do what you like to do. I can guarantee that you will have no regrets about using our Development-Lifecycle-and-Deployment-Architect Test Braindumps. When the time for action arrives, stop thinking and go in, try our Development-Lifecycle-and-Deployment-Architect exam torrent, you will find our products will be a very good choice for you to pass your exam and get you certificate in a short time.

Salesforce Development-Lifecycle-and-Deployment-Architect Certification Exam is a rigorous test that evaluates a candidate's ability to design and implement scalable Salesforce solutions. Salesforce Certified Development Lifecycle and Deployment Architect certification is highly valued in the industry and is recognized by Salesforce as a mark of excellence in Salesforce development and deployment. Passing the exam requires thorough preparation and a deep understanding of the Salesforce platform and its best practices. Salesforce Certified Development Lifecycle and Deployment Architect certification is a valuable asset for professionals who want to advance their careers in Salesforce development and deployment.

## Salesforce Certified Development Lifecycle and Deployment Architect Sample Questions (Q172-Q177):

### NEW QUESTION # 172

Universal Containers (UC) has a huge volume of metadata that cannot be deployed at once. What is the recommended strategy for UC to be successful with the deployment?

- A. Identify metadata dependencies, create logical groupings, and deploy in the right order.
- B. Use a combination of the Ant migration tool and change sets for deployment.
- C. Use a continuous integration tool such as Jenkins to deploy in the right order.
- D. Sort and group the metadata alphabetically and deploy them in the same order.

**Answer: A**

Explanation:

The recommended strategy for deploying a large volume of metadata is to identify metadata dependencies, create logical groupings, and deploy in the right order. This can help avoid errors and ensure a smooth deployment process.

#### NEW QUESTION # 173

Universal Containers (UC) environment management architect is using the package development model for deployment to different orgs.

Which metadata changes does the architect need to track manually?

- A. All metadata changes for the release.
- B. Changes to components not yet supported by source tracking.
- C. No manual tracking required. All changes are automatically tracked.
- D. Only the changes made via the Setup UI.

**Answer: B**

Explanation:

The package development model relies on source tracking to automatically track the metadata changes in the package project. However, not all metadata components are supported by source tracking, and some changes may need to be tracked manually. For example, changes to profiles, permission sets, custom metadata types, and custom settings are not supported by source tracking. You can find the list of unsupported components [here](#). No manual tracking is required for the changes that are supported by source tracking, nor for the changes made via the Setup UI, as they are automatically captured by the package development model.

#### NEW QUESTION # 174

Universal Container has multiple departments who use Salesforce and request changes: Sales, Service, Back Office, Marketing, etc. Each of these departments makes independent purchase decisions for AppExchange apps, field requests, and page layouts, resulting in low adoption and under-use of standard Salesforce capabilities. What mechanism should a Technical Architect recommend to increase use of standard Salesforce functionality?

- A. Change Control Board
- B. Requirements Traceability Matrix
- C. Center of Excellence
- D. Project Management Office

**Answer: C**

#### NEW QUESTION # 175

Universal Containers has a large call center that has a limited inventory and must ensure there is product availability before an Opportunity is marked as Closed. Custom Apex has been implemented to check inventory levels before an Opportunity is saved. What should an architect consider before recommending Performance testing?

- A. Number of Apex Hammer failures
- B. Number of unit tests
- C. Number of debug log entries
- D. Number of concurrent transactions

**Answer: D**

Explanation:

Explanation

The most important factor to consider before recommending Performance testing is the number of concurrent transactions, as this

will affect the response time and throughput of the system. Option A is not relevant, as unit tests are used to verify the functionality and quality of the code, not the performance. Option B is not related, as Apex Hammer failures are used to check the compatibility of the code with new platform releases, not the performance. Option C is not helpful, as debug log entries are used to troubleshoot errors and issues, not the performance.

### NEW QUESTION # 176

Universal Containers (UC) is an enterprise financial company that operates in EMEA, AMER, and APAC.

Because of regulatory requirements, UC has a separate Salesforce org for each region. Each org has its own customizations that fit for the region needs, but there are also standard processes that apply to all regions requirements.

As the deployment architect, what should be considered for the multi-org deployment strategy?

- A. Deploy metadata to production orgs using unmanaged packages.
- **B. Deploy metadata to production orgs using package development model.**
- C. Deploy metadata to production orgs using change sets.
- D. Deploy metadata to production orgs using managed packages.

**Answer: B**

Explanation:

Explanation

Deploying metadata to production orgs using package development model is the best option for the multi-org deployment strategy, as it allows you to create modular and reusable packages that can be easily installed and updated across different orgs. Deploying metadata to production orgs using managed packages is not suitable for this scenario, as managed packages are typically used by ISVs to distribute their applications to customers, and they have some limitations and restrictions that may not fit the requirements of UC. Deploying metadata to production orgs using unmanaged packages is also not a good option, as unmanaged packages are mainly used for one-time distribution of components, and they do not support upgrades or dependencies. Deploying metadata to production orgs using change sets is not feasible for this scenario, as change sets can only be used to deploy metadata between connected orgs in the same Salesforce instance, and UC has separate orgs for each region. See [Package Development Model] for more details.

### NEW QUESTION # 177

.....

Our company BraindumpStudy has been putting emphasis on the development and improvement of our Development-Lifecycle-and-Deployment-Architect test prep over ten year without archaic content at all. So we are bravely breaking the stereotype of similar content materials of the Development-Lifecycle-and-Deployment-Architect Exam, but add what the exam truly tests into our Development-Lifecycle-and-Deployment-Architect exam guide. So we have adamant attitude to offer help rather than perfunctory attitude. It will help you pass your Development-Lifecycle-and-Deployment-Architect exam in shortest time.
