You can easily download these formats of Microsoft AZ-204 actual dumps and use them to prepare for the Microsoft AZ-204 certification test. You do not need to enroll yourself in expensive AZ-204 Exam Training classes. With the Microsoft AZ-204 valid dumps, you can easily prepare well for the actual Developing Solutions for Microsoft Azure exam at home.

Also, individuals who have already earned or in the process of earning the following certifications are targeted:

- MCSA Web Applications
- MCSA Universal Windows Platform
- MCSA App Builder

Step 3: Follow the Training Program Offered by Microsoft

The candidates for the AZ-204 Exam can go for suitable training courses offered by reliable providers. “Developing Solutions for Microsoft Azure” and “Microsoft Azure Solutions for AWS Developers” are the official instructor-led courses for this certification test that can be accessed on the Microsoft site. In addition, the candidates can also opt for free learning paths in order to effectively complete their lessons in real situations. These paths that can be found on the official platform have the following titles:

- Store Data in Azure
- Manage Resources in Azure
- Connect Your Services Together
- Deploy a Website with Azure Virtual Machines
- Create Serverless Applications

Enhance your Exam Preparation by using Real AZ-204 Questions

We trounce many peers in this industry by our justifiably excellent AZ-204 training guide and considerate services. So our AZ-204 exam prep receives a tremendous ovation in market over twenty years. All these years, we have helped tens of thousands of exam candidates achieve success greatly. For all content of our AZ-204 Learning Materials are strictly written and tested by our customers as well as the market. Come to try and you will be satisfied!

Microsoft AZ-204 exam is designed to test the skills and knowledge of developers who are looking to develop solutions for Microsoft Azure. Developing Solutions for Microsoft Azure certification exam is aimed at individuals who are interested in working with cloud technologies and want to demonstrate their expertise in developing cloud-based applications. AZ-204 Exam covers a

wide range of topics, including Azure compute, storage, security, and networking, making it a comprehensive certification that validates a developer's ability to build and deploy Azure-based solutions.

Microsoft Developing Solutions for Microsoft Azure Sample Questions (Q463-Q468):

NEW QUESTION # 463

You develop and deploy an Azure App Service web app to a production environment. You enable the Always On setting and the Application Insights site extensions. You deploy a code update and receive multiple failed requests and exceptions in the web app. You need to validate the performance and failure counts of the web app in near real time. Which Application Insights tool should you use?

- A. Profiler
- B. Smart Detection
- C. Live Metrics Stream
- D. Application Map
- E. Snapshot Debugger

Answer: C

NEW QUESTION # 464

You are developing an Azure solution.

You need to develop code to access a secret stored in Azure Key Vault.

How should you complete the code segment? To answer, drag the appropriate code segments to the correct locations. Each code segment may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

□

Answer:

Explanation:

□

Explanation

Graphical user interface, text, application Description automatically generated with medium confidence

□

Box 1: SecretClient

Box 2: DefaultAzureCredential

In below example, the name of your key vault is expanded to the key vault URI, in the format

"https://<your-key-vault-name>.vault.azure.net". This example is using 'DefaultAzureCredential()' class from Azure Identity Library, which allows to use the same code across different environments with different options to provide identity.

string keyVaultName = Environment.GetEnvironmentVariable("KEY_VAULT_NAME"); var kvUri = "https://" + keyVaultName + ".vault.azure.net"; var client = new SecretClient(new Uri(kvUri), new DefaultAzureCredential()); Reference:

<https://docs.microsoft.com/en-us/azure/key-vault/secrets/quick-create-net>

NEW QUESTION # 465

Your company has several websites that use a company logo image. You use Azure Content Delivery Network (CDN) to store the static image.

You need to determine the correct process of how the CDN and the Point of Presence (POP) server will distribute the image and list the items in the correct order.

In which order do the actions occur? To answer, move all actions from the list of actions to the answer area and arrange them in the correct order.

□

Answer:

Explanation:

□

Explanation

□

Step 1: A user requests the image..

A user requests a file (also called an asset) by using a URL with a special domain name, such as <endpoint name>.azureedge.net.

This name can be an endpoint hostname or a custom domain. The DNS routes the request to the best performing POP location,

which is usually the POP that is geographically closest to the user.

Step 2: If no edge servers in the POP have the..

If no edge servers in the POP have the file in their cache, the POP requests the file from the origin server. The origin server can be an Azure Web App, Azure Cloud Service, Azure Storage account, or any publicly accessible web server.

Step 3: The origin server returns the..

The origin server returns the file to an edge server in the POP.

An edge server in the POP caches the file and returns the file to the original requestor (Alice). The file remains cached on the edge server in the POP until the time-to-live (TTL) specified by its HTTP headers expires. If the origin server didn't specify a TTL, the default TTL is seven days.

Step 4: Subsequent requests for..

Additional users can then request the same file by using the same URL that the original user used, and can also be directed to the same POP.

If the TTL for the file hasn't expired, the POP edge server returns the file directly from the cache. This process results in a faster, more responsive user experience.

NEW QUESTION # 466

All functions in the app meet the following requirements:

- * Run until either a successful run or until 10 run attempts occur.

- * Ensure that there are at least 20 seconds between attempts for up to 15 minutes.

You need to configure the hostjson file.

How should you complete the code segment? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

☐

Answer:

Explanation:

☐ Explanation:

☐

NEW QUESTION # 467

You are developing a solution by using the Azure Event Hubs SDK. You create a standard Azure Event Hub with 16 partitions.

You implement eight event processor clients.

You must balance the load dynamically when an event processor client fails. When an event processor client fails, another event processor must continue processing from the exact point at which the failure occurred. All events must be aggregate and upload to an Azure Blob storage account. You need to implement event processing recovery for the solution.

Which SDK features should you use? To answer, select the appropriate options in the answer area.

Each correct selection is worth one point.

☐

Answer:

Explanation:

☐
